The preparation of this document was funded in part by the United States Department of Transportation with funding administered through the North Dakota Department of Transportation, Minnesota Department of Transportation, the Federal Highway Administration, and the Federal Transit Administration. Additional funding was provided through local contributions from the governments of Grand Forks, East Grand Forks, Grand Forks County, and Polk County. The United States Government and the States of Minnesota and North Dakota assume no liability for the contents or use thereof.

The document does not constitute a standard specification, or regulation. The United States Government, the States of Minnesota and North Dakota, and the Metropolitan Planning Organization do not endorse products or manufacturers. Trade or manufacturers' names appear herein only because they are considered essential to the objective of the document.
The contents of the document reflect the authors, who are responsible for facts and accuracy of data presented herein. Contents do not necessarily reflect polices of the States and Federal Department of Transportation.

# A RESOLUTION ADOPTING <br> THE YEAR 2045 <br> METROPOLITAN TRANSPORTATION PLAN FOR THE GRAND FORKS - EAST GRAND FORKS METROPOLITAN AREA 

WHEREAS, the U. S. Department of Transportation requires the development of a metropolitan transportation plan by a metropolitan planning organization for each urbanized area and area expected to have growth over a twenty-year period; and

WHEREAS, the Grand Forks - East Grand Forks Metropolitan Planning Organization (MPO) has been designated as the policy body with the responsibility of performing transportation planning in the Grand Forks - East Grand Forks Metropolitan Area; and

WHEREAS, the MPO is designated by the Governors of North Dakota and Minnesota as the body responsible for making transportation planning decisions in the Grand Forks - East Grand Forks Metropolitan Area; and

WHEREAS, the existing metropolitan transportation plan was adopted in 2008 and, as in accordance with 23 U.S.C. 134 and 23 CFR 450.322 , is being updated to remain current, maintain a twenty-year horizon and comply with new requirements from FAST; and

WHEREAS, the metropolitan transportation plan, in accordance with 23 CFR 450.322 , is multi-modal in scope and accounts for all travel modes in the four sections of the plan: Street \& Highway, Transit, Pedestrian, and Bicycle; and

WHEREAS, a 2040 long range transportation plan was adopted in December 18, 2013; and

WHEREAS, the MPO has worked with the North Dakota Department of Transportation, which is its lead agency for metropolitan planning activities, to ensure compliance with FAST; and

WHEREAS, the metropolitan transportation plan, in accordance with 23 CFR 450.322 , shall be financially constrained to demonstrate that proposed projects have existing and/or reasonably projected sources of funds; and

WHEREAS, the MPO followed its adopted Public Participation Plan to proactively involve the public early and often in the transportation planning process and held a public hearing at the appropriate time for each action regarding the Metropolitan Transportation Plan; and

WHEREAS, the By-Laws of the MPO allow the MPO Executive Board to take action upon adoption of the Street/Highway Plan element of the Metropolitan Transportation Plan sixty (60) days after said plan had been submitted to the representative city or sooner if the representative cities adopted the said plan prior to the 60 day period; and

WHEREAS, the Technical Advisory Committee of the MPO held public meetings on the proposed Metropolitan Transportation Plan; and

WHEREAS, the Planning Commission for Grand Forks, North Dakota, held a public hearing on December 5, 2018, on the proposed Street/Highway element of the Metropolitan Transportation Plan; and

WHEREAS, the City Council for Grand Forks, North Dakota, held a public hearing on December 17, 2018, on the proposed Street/Highway element of the Metropolitan Transportation Plan; and

WHEREAS, the Planning Commission for East Grand Forks, Minnesota, held a public meeting on November 8, 2018, on the proposed Street/Highway element of the Metropolitan Transportation Plan; and

WHEREAS, the City Council for East Grand Forks, Minnesota, held a public meeting on December 18, 2018, on the proposed Street/Highway element of the Metropolitan Transportation Plan; and

WHEREAS, the Executive Policy Board of the Grand Forks - East Grand Forks Metropolitan Planning Organization considered the actions taken by the local governmental agencies; and

NOW, THEREFORE, BE IT RESOLVED, by the Executive Policy Board of the Grand Forks - East Grand Forks Metropolitan Planning Organization adopts the proposed Year 2045 Street and Highway Element as presented with the following amendments:

## $\frac{12 / 19 / 2018}{\text { Date }}$ Date

## ORDINANCE NO. 4696

AN ORDINANCE AMENDING THE COMPREHENSIVE PLAN, AMENDING CHAPTER XVIII, ARTICLE 8, COMPREHENSIVE PLAN; SECTION 18-0802, ELEMENTS OF THE GRAND FORKS CITY CODE OF 1987, AS AMENDED, PERTAINING TO THE GRAND FORKS-EAST GRAND FORKS 204540 TRANSPORTATION PLAN UPDATE.

BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF GRAND FORKS, NORTH DAKOTA, THAT:

## Section 1. Amending Clause ...

Section 18-0802 (1) is hereby amended as follows:
(C) The Grand Forks-East Grand Forks 2040 Long Range 2045

Metropolitan Transportation Plan Update, which contains the following sections.

1. 20132018 Street and Highway Element, together with all maps, information and data contained within.

## Section 2. Effective Date

This ordinance shall be in full force and effect after its passage and approval as provided by law.

ATTEST:

Maureen Storstad, City'Auditor
Introduction and first reading: November 19, 2018
Public Hearing: December 17, 2018
Second reading and final passage: December 17, 2018
Approved: December 17, 2018
Published: Not required by law.
Recorded:

A RESOLUTION UPDATING THE GRAND FORKS MASTER PLAN FOR THE CITY OF GRAND FORKS, NORTH DAKOTA, AND PROVIDING FOR THE AMENDMENT THEREOF, PURSUANT TO CHAPTER 40-48, NORTH DAKOTA CENTURY CODE, AND FOR THE REPEAL OF ALL SECTION CONFLICT HEREWITHIN.

WHEREAS, the governing body of the City of Grand Forks has created a Planning \& Zoning Commission in accordance with state law, and

WHEREAS, Chapter 40-48, North Dakota Century Code, empowers the Planning \& Zoning Commission to make and adopt an official Master Plan and to provide for its administration, enforcement, and amendment thereof, and

WHEREAS, the Grand Forks Year 2045 Transportation Plan Update was made with the general purpose of providing a program for the orderly growth of the City of Grand Forks and its environs in the future, which in accordance with present and future needs will provide amenities of life, health, safety, morals, order, convenience, prosperity, and general welfare, and

WHEREAS, the existing Street/Highways Modes element of the Grand Forks Master Plan is in need of an update due to the Federal transportation bill Fixing America's Surface Transportation, and

WHEREAS, the Grand Forks City Planning \& Zoning Commission has given due public notice of the hearing related to amending the Street/Highways Modes element of the Master Plan, and

WHEREAS, all requirements of Chapter 40-48, North Dakota Century Code, with regard to the preparation of the plan have been adhered to and met:

NOW, THEREFORE, BE IT ORDAINED BY THE GRAND FORKS CITY PLANNING \& ZONING COMMISSION OF GRAND FORKS, NORTH DAKOTA, THAT WE DO ADOPT THE 2018 STREET/HIGHWAYS MODES ELEMENT OF THE GRAND FORKS - EAST GRAND FORKS 2045 METROPOLITAN TRANSPORTATION PLAN AS AN AMENDMENT TO THE GRAND FORKS MASTER PLAN.

Dated this $S^{\text {th }}$ day of Dec, 2018

Steve Wasvick,
President, Grand Forks Planning and Zoning Commission

## RESOLUTION NO. 18-12-83

Council Member Vetter, supported by Council Member DeMers, introduced the following resolution and moved its adoption:

WHEREAS, the city of East Grand Forks has an adopted East Grand Forks Comprehensive Plan; and WHEREAS, the proposed plan update is in general agreement with the other elements of the East Grand Forks Comprehensive Plan, those other elements being the following:

1. The Grand Forks - East Grand Forks 2009 Downtown Plan Update Element, together with all maps, information and data contained therein.
2. 2045 Plan Update of the East Grand Forks Land Use Plan Element, together with all maps, information and data contained therein.
3. The Grand Forks - East Grand Forks 2040 Long Range Transportation Plan Update, which contains the following sections:
a. Bikeway Element, together with all maps, information and data contained therein.
b. Pedestrian Element, together with all maps, information and data contained therein.
c. Transit Element, together with all maps, information and data contained therein.
d. Street and Highway Element, together with all maps, information and data contained therein.
e. Intelligent Transportation Systems (ITS) Strategy Element, together with all maps, information and data contained therein.
4. The 1998 East Grand Forks Downtown Plan prepared by Field - Paoli, together with all maps, information and data contained therein.
5. The 2000 Urban Design Plan, together with all maps, information and data contained therein.
6. Greenway Plan Element Update, together with all maps, information and data contained therein.

## And

WHEREAS, The Grand Forks - East Grand Forks Metropolitan Planning Organization has prepared a Year 2045 Plan Update of the Grand Forks -East Grand Forks Long Range Transportation Plan Street \& Highway Element of the East Grand Forks Comprehensive Plan; and

WHEREAS, 2045 Plan Update of the Grand Forks -East Grand Forks Long Range Transportation Plan Street \& Highway Element of the East Grand Forks Comprehensive Plan is a guide for future growth for the City; and

WHEREAS, the Grand Forks -East Grand Forks Long Range Transportation Plan Street \& Highway Element may be amended to reflect transportation changes in the community; and

WHEREAS, the Grand Forks -East Grand Forks Long Range Transportation Plan Street \& Highway Element $s$ a representation of the transportation goals and values of the city; and

WHEREAS, the City Planning and Zoning Commission further held a public meeting at the East Grand Forks City Hall 12 Noon November 8, 2018 to get input from the citizens of the community; and

WHEREAS, the East Grand Forks Planning and Zoning Commission forwards a recommendation that the 2045 Plan Update to the Grand Forks -East Grand Forks Long Range Transportation Plan Street \& Highway Element, be hereby approved and adopted; now therefore

BE IT RESOLVED, By the City Council of the City of East Grand Forks, Minnesota, that the 2045 Plan Update to the Grand Forks -East Grand Forks Long Range Transportation Plan Street \& Highway Element of the East Grand Forks Comprehensive Plan, and proposed amendments, be hereby approved and adopted with any further amendments as stated:

Voting Aye: Riopelle, Tweten, Olstad, Grassel, DeMers, Vetter, and Pokrzywinski.
Voting Nay: None.
Absent: None.
The President declared the resolution passed.

City Administrator/Clerk-Treasurer

I hereby approve the foregoing resolution this $18^{\text {th }}$ day of December, 2018.

Mayor

## Chapter 1. Introduction

## Overview

The Grand Forks/East Grand Forks (GF/EGF) Metropolitan Transportation Plan identifies existing and future needs to maintain a robust regional, multimodal transportation system in the near- and long-term future. This plan was successfully developed through ongoing collaboration among Grand Forks, East Grand Forks, Polk County, Grand Forks County, North Dakota Department of Transportation (NDDOT), Minnesota Department of Transportation (MNDOT), the Cities Area Transit (CAT), the Federal Highway Administration (FHWA), Federal Transit Administration (FTA), citizens and business throughout the region, and the Grand Forks-East Grand Forks Metropolitan Planning Organization. With input from these stakeholders, the Metropolitan Transportation Plan outlines outcomes and standards to advance the locally identified issues, vision, goals, and performance targets.

The sections that follow focus on the street and highway components of the region's multimodal transportation system, as illustrated in Figure 1-1. This street and highway plan accounts for changes in the metropolitan area since the last plan adopted in 2013. Actions and strategies outlined here are complemented by the Grand Forks/East Grand Forks Metropolitan Planning Organization's Transit Development Plan (adopted July 2017) and Bicycle and Pedestrian Plan (adopted December 2018). The three documents work together to guide planning and funding for multimodal transportation in the Grand Forks/East Grand Forks metropolitan area.

## Fixing America's Surface Transportation Act (FAST Act)

This plan is structured to address the planning requirements in the FAST Act that advance a streamlined, performance-based, multimodal transportation system and planning process. Guiding principles of that legislation aim to improve safety, maintain infrastructure quality, reduce traffic congestion, and accordingly improve efficiency of the system and freight movements, while minimizing environmental impact and reducing delays in project delivery.

To be consistent with federal requirements, the GF/EGF MPO aims to:

- Utilize performance-based planning and programming focused on national transportation goals to improve transportation investment decisions and increase accountability of the Federal Highway Programs
- Position programs within a streamlined and simplified program structure with a smaller number of broader core programs
- Comply with federal prioritization of the National Highway System (NHS) and its maintenance
- Identify "State of Good Repair" projects that improve ride quality or extend the life of a roadway, as opposed to expanding the system

Figure 1-1: Grand Forks-East Grand Forks Street and Highway System

Source: Grand Forks-East Grand Forks MPO

## The Metropolitan Transportation Plan Update Process

The Grand Forks/East Grand Forks MPO leads the region's multimodal transportation planning process. While this Plan highlights the street and highway components of a multimodal approach, they are just one element of larger regional planning efforts.

This Plan is guided by goals and performance measures that grew out of community values. These objectives represent a wide range of social, technical, environmental, and economic factors that influence the region's transportation system.

## Plan Chapters

The following chapters and topics address the GF/EGF transportation system from Plan development through implementation strategies.

## Vision, Goals, Objectives, Standards, Performance Measures and Targets

Development of the Plan is based in community input on the vision, goals, objectives, standards, performance measures, and performance targets. Through consultation with the Technical Advisory Committee, Policy Board, and the general public, stakeholders identified priorities for the region's current and future transportation system. The goals, performance measures, and performance targets have been updated to address the FAST Act.

## Existing Conditions and Special Studies

To address future needs of the multimodal system, this chapter highlights the current state of the street and highway system and findings from special studies. The chapter addresses:

- Demographics and land use
- Natural and environmental resources
- Carbon footprint
- Roadway characteristics including jurisdiction, number of lanes, functional classification, pavement condition, and bridge condition
- Existing traffic conditions including traffic volumes, intersection level of service, and roadway level of service
- Crashes
- Freight routes, volumes, and crashes
- Programmed regionally significant improvements
- Recent highway studies and their results
- I-29 Traffic Operations Study (2017, Grand Forks)
- US 2 and US 2 Business Study (2017, East Grand Forks)
- Bygland Road Study (2016, East Grand Forks)
- Glasston Railroad Crossing Study (2016, Grand Forks)

- Grand Forks Air Force Base Traffic Study (2013, Grand Forks)

Identification of System, Issues, and Opportunities
To effectively advance a long-term multimodal plan, project staff worked with stakeholders to address community concerns and desires. This chapter summarizes engagement efforts and frequently occurring themes that shaped
the issues and opportunities addressed throughout the Plan. The planning process included a variety of stakeholder and community engagement opportunities:

- Public meetings and open houses in August 2017 in Grand Forks and December 2017 in East Grand Forks
- Interactive mapping, surveys, and comment forms on the project website: www.theforksstreets2045.org
- MPO Facebook updates and postings
- MPO website updates
- Agency and stakeholder meetings
- Local media press releases and interviews with MPO staff

Some of the key issues identified include:

- Additional southern Red River crossing
- 32nd Avenue South
- Proposed interchange improvements along I-29
- Bygland Road
- Columbia Road
- Washington Avenue
- Belmont Road
- Proposed railroad grade separations at DeMers Avenue and US Highway 2
- US Highway 2
- Demers Avenue through the Grand Forks and East Grand Forks downtowns
- Minnesota TH 220

## Range of Alternatives

This chapter identifies potential roadway improvement alternatives to address the identified transportation needs. It provides a summary of the process used to develop various street and highway improvements to address short, mid-, and long-range issues. The range of alternatives process is intended to result in a comprehensive list of potential improvement projects that address goals, objectives, standards, performance measures and targets, and issues.

The range of alternatives list was developed by identifying improvements in existing planning documents, existing transportation improvement programs, and recent studies. Additional improvements, such as river crossing alternatives, were identified based on stakeholder input and Street/Highway Plan technical analysis results. Public input and partner agency feedback also contributed to the development of the list of projects for evaluation.

The range of alternatives includes projects in six categories:

- MPO TIP: Included in current regional TIP
- Existing + Committed (E + C) Network: Projects expected to be completed using Non-Federal/NonState funds
- Safety/Operations - HSIP: Projects that will improve the safety and operation of the existing system
- Multimodal, Streetscape, Studies: Projects emphasizing multimodal or streetscape improvements or studies
- State of Good Repair: Projects related to maintenance and preservation of the existing system
- Discretionary: All remaining projects not listed previously

## Financial Plan

As a crucial component of the Transportation Plan, the Financial Plan establishes the fiscal context for potential capital and operating investments. This chapter identifies potential funding programs to advance potential improvement projects. It also presents anticipated revenue amounts by program and jurisdiction.

The planning process based the revenue forecast in a locally-derived methodology approved by each State DOT and local partners:

- Establish historical transportation improvement funding programs and amounts
- Establish new transportation improvement funding programs and amounts
- Establish revenue growth rates
- Identify future available revenues for short-range (2023-2027), mid-range (2028-2037), and long-range (2038-2045) timeframes

## Recommended Network Improvements and Implementation Program

The long-range planning process concludes by identifying a program of projects for implementation. The process to develop the Implementation Program merges the Range of Alternatives with goals, objectives, standards, and network performance with available revenues. The Implementation Program is also called the fiscally constrained or Current Revenue scenario. Projects listed in the Current Revenue Scenario are eligible to compete for federal transportation funding through the GF/EGF MPO's Transportation Improvement Program (TIP) process.

Development of the Current Revenue Scenario considered:

- Goals, objectives, standards, and network performance outcomes
- Revenue available by timeframe, short-range (2023-2027), mid-range (2028-2037), and long- range (2038-2045)
- Public input - including input on identification and prioritization of needs
- Ability to help maximize useful life of existing pavement and bridge infrastructure by corridor
- Existing investment programs
- Project costs in year of expenditure
- Local knowledge

## Current Revenue Scenario

The fiscally constrained Current Revenue Scenario includes $\$ 267$ million in investments as illustrated in Table 1-1. The Current Revenue Scenario identifies specific projects for Safety/Operations, North Dakota Main Street, State of Good Repair: Interstate, and State of Good Repair: Non-Interstate National Highway System. The majority of investments will go toward maintaining existing pavement and bridges (state of good repair), with some investments emphasizing safety (safety/operations) and livability (North Dakota Main Street). These projects supplement those identified in the 2019-2022 Transportation Improvement Program.

Table 1-1: Current Revenue Scenario Project Type Investment Amounts

| Project Type | Investment <br> Amounts | Share |
| :---: | :---: | :---: |
| Safety | $\$ 4.8$ million | $2 \%$ |
| North Dakota Main Street | $\$ 39.1$ million | $14 \%$ |
| State of Good Repair: Interstate | $\$ 28.9$ million | $11 \%$ |
| State of Good Repair: Non-Interstate NHS | $\$ 194.1$ million | $73 \%$ |
| Total | $\$ 267$ million | $100 \%$ |

## Illustrative Projects

Some regionally significant projects were not included in the Current Revenue Scenario. These illustrative projects have a regionally significant transportation purpose and need, but costs exceed forecast revenues. Table 1-2 lists some of the highest ranked illustrative projects The Red River crossing projects, $32^{\text {nd }}$ Avenue S and Merrifield Road, shown on the bottom of the table are included on the list as a result of policy direction from the GF/EGF MPO Board that was made considering input from this planning process and public input. The river crossing projects will provide regional connectivity across the Red River, supplementing the three existing river crossings that are forecast to operate with significant congestion in 2045.

Table 1-2: Illustrative "Projects of Significance"

| Project Type | Project Description |
| :---: | :---: |
| State of Good Repair | Non-NHS Federal Aid Eligible Streets/Highways |
| Intersections | 32nd Avenue/South Washington Street Central Avenue: 17th Street to 23rd Street US 2 (Gateway Drive): Washington Street to Mill Road <br> US 2 (Gateway Drive): Cambridge Street to Columbia Road |
| Additional Lanes | - Columbia Road: 14 th Avenue S. to 24th Avenue S. |
| Interstate 29 Interchange Upgrades | - North Washington US 2 (Gateway Drive) DeMers Avenue 32nd Avenue |
| New Grade Separations | US 2 (Gateway Drive) east of Interstate 29 42nd Street: North of DeMers Avenue |
| New River Crossings | - 32nd Avenue <br> - Merrifield Road |

## Environmental Considerations

The GF/EGF MPO's transportation planning activities are performed at the regional level and projects identified in this plan require more detailed scoping and design analysis to identify detailed social, economic, and environmental impacts. These analyses will be performed as projects are further developed.
The GF/EGF MPO solicited input from several Federal, State, and Tribal land management, wildlife, and regulatory agencies on possible environmental mitigation activities that may be appropriate for the types of system improvement projects identified in the plan. Agencies were notified via letter and requested to provide input on the projects and proposed environmental mitigation activities identified during the planning process. There were 50 different agencies from which comments were solicited. The GF/EGF MPO and its jurisdictional partners are committed to minimizing and mitigating the negative effects of transportation projects on the natural and built environments.

## Environmental Justice

Executive Order 12898 directs Federal agencies to take appropriate and necessary steps to identify and address disproportionately high and adverse effects of Federal projects, including the transportation planning process, on the health or environment of minority and low-income populations to the greatest extent practical and permitted by law. USDOT Order 5610.2(a) sets forth the USDOT policy to consider environmental justice (EJ) principles in all (USDOT) programs, policies, and activities. It describes how the objectives of $E J$ will be integrated into planning and programming, rulemaking, and policy formulation. The Order sets forth steps to prevent disproportionately high and adverse effects to minority or low-income populations through Title VI analyses and EJ analyses conducted as part of Federal transportation planning and NEPA provisions. Disproportionate is defined in two ways: the impact is predominantly borne by the minority or low-income population group, or the impact is appreciably more severe than that experienced by non-minority or non-low-income populations.

The MPO addresses Environmental Justice to ensure non-discrimination concerning enacted transportationrelated laws, regulations, and policies. The MPO has developed an Environmental Justice Program Manual
designed to provide guidance in meeting EJ mandates and structuring a public participation plan at the project or study level. To certify compliance with, and to address environmental justice, the MPO:

- Identifies residential, employment, and transportation patterns of low-income and minority populations so that their needs can be identified and addressed, and the benefits and burdens of transportation investments can be fairly distributed.
- Ensures that the long-range transportation plan and the transportation improvement program (TIP) comply with the tenets of Environmental Justice.
- Utilizes public involvement processes to eliminate participation barriers and engage minority and lowincome populations in transportation decision making.

These areas will be evaluated further as Current Revenue Scenario projects are further developed.

## Performance Based Planning

MAP-21 and FAST ACT requires incorporation of performance based planning in the development of the Grand Forks - East Grand Forks MPO metropolitan transportation plan. The requirement in these US Laws defined that the Plan shall include, to the maximum extent practicable, a description of the anticipated effect of the Plan toward achieving the performance measures by linking them with the investment priorities.

The 2045 Street/Highway Plan implements the now promulgated required national performance measures. The Plan integrates the safety plans developed by partner agencies, including each state's Strategic Highway Safety Plan and more localized strategic highway safety plans that apply state-level emphasis areas and strategies consistent with local context and intent to implement. The 2045 Plan also identifies projects for Highway Safety Improvement Program (HSIP) funding (see Chapter 7 Table 7-8 and Table 7-13). These projects are expected to have a positive impact toward meeting safety targets in North Dakota.
This plan also acknowledges the need to update plans that prioritize safety-related projects for HSIP funding. A concern with these safety plans, particularly on the Minnesota side, has been the lack of MPO inclusion in the safety planning process. The most recent Minnesota Strategic Highway Safety Plan greatly improved MPO engagement, but this practice has not carried forward with each respective District and/or County Safety plan update. Further, the Minnesota process for programming funds from the Highway Safety Improvement Program has historically neglected the active engagement of MPOs. Routinely, MnDOT solicits, vets and programs projects without involvement from Greater Minnesota MPOs. This plan recommends improvements to the HSIP project solicitation process, and efforts are underway to improve it.

The 2045 Street/Highway Plan emphasizes projects that support State of Good Repair for pavement and bridges on the Interstate, non-Interstate National Highway System, and Federal Aid-Eligible System in North Dakota and Minnesota (see Chapter 7 Table 7-4, Table 7-5, Table 7-6, Table 7-7, Table 7-10, Table 7-11, and Table 7-12). These projects are expected to have a positive impact toward meeting pavement and bridge condition targets in North Dakota and Minnesota.
The Grand Forks-East Grand Forks MPO understands it is in the early stages of developing a fully compliant, performance-based MTP. As multiple years of data is collected for the performance measures and their targets, the MPO will monitor performance and evaluate if trends are moving toward meeting the targets. The Grand Forks-East Grand Forks MPO commits to making adjustments to planning strategies to meet the performance targets if the desired results are not being met.

## Chapter 2. Vision, Goals, Objectives, Standards, Performance Measures and Targets

The metropolitan transportation plan's (MTP) - Streets and Highway Element vision, goals, objectives, standards, performance measures and targets are critical in the planning process because they defined the region's desired outcomes resulting from plan implementation. The Plan's vision, goals, objectives, standards, performance measures and targets were developed in coordination with North Dakota Department of Transportation (NDDOT), Minnesota Department of Transportation (MnDOT), the Federal Highway Administration, the Technical Advisory Committee (TAC), Policy Board, and general public.

The Plan's goals align directly with the ten federal transportation planning factors, and with the federal livability principles and the national transportation performance goals. They also build on the goals, objectives, standards, and performance measures, and performance targets adopted in the previous plan. Several goals, performance measures, and performance targets were updated to address requirements in the Fixing America's Surface Transportation Act (FAST Act), the most recent federal transportation reauthorization bill passed in 2015.

## FAST Act Requirements

Federal law identifies seven (7) national performance goals (source: $\underline{23 \text { USC § 150). Each Grand Forks-East }}$ Grand Forks goal area is consistent with one or more national performance goal, and this alignment is shown in Table 2-1. The Grand Forks-East Grand Forks goals are not listed in order of priority. The national performance goals in order of alignment frequency with the Grand Forks-East Grand Forks goal areas are:

- Freight movement and economic vitality - In alignment with ten (10) Grand Forks-East Grand Forks MPO goals
- System reliability - In alignment with nine (9) Grand Forks-East Grand Forks MPO goals
- Safety - In alignment with nine (9) Grand Forks-East Grand Forks MPO goals
- Infrastructure condition - In alignment with eight (8) Grand Forks-East Grand Forks MPO goals
- Congestion reduction - In alignment with eight (8) 2040 Grand Forks-East Grand Forks MPO goals
- Environmental sustainability - In alignment with seven (7) Grand Forks-East Grand Forks MPO goals
- Reduced project delivery delays - In alignment with six (6) Grand Forks-East Grand Forks MPO goals

The national performance goals are prescribed by law, and MPO-identified objectives, measures, and metrics should not conflict with these national performance goals. Federal law creates flexibility for states and MPOs to define the exact means and methods used to track progress toward achieving locally identified outcomes. Each MPO is required to conduct a robust planning process that results in goals, objectives, measures, and metrics that are compatible with the national goals and are priorities for the local community. The MPO goals were designed to match local interests, while still supporting the national goals. The scope of each MPO goal was compared to each national performance goal. If there was any overlap in the scope of the MPO and the national goals, then it was noted that the federal goal was satisfied by a given MPO goal.
Appendix A also demonstrates the Plan's linkage with NDDOT Statewide Strategic Transportation Plan Goals and MnDOT Statewide Multimodal Transportation Plan Objectives.

Table 2-1: Grand Forks-East Grand Forks Goal Areas and Alignment with National Performance Goals

| MPO Goal Number | MPO Goal <br> (also Federal Transportation Planning Factors) | MPO Goal Statement | National Performance Goal(s) Satisfied |
| :---: | :---: | :---: | :---: |
| 1 | Economic Vitality | Support the economic vitality through enhancing the economic competitiveness of the metropolitan area by giving people access to jobs, and education services as well as giving business access to markets. | - Congestion reduction <br> - Freight movement and economic vitality <br> - Reduced project delivery delays <br> - Safety <br> - System reliability |
| 2 | Security | Increase security of the transportation system for motorized and non-motorized uses. | Freight movement and economic vitality Infrastructure condition $=$ Safety System reliability |
| 3 | Accessibility and Mobility | Increase the accessibility and mobility options for people and freight by providing more transportation choices. | Congestion reduction  <br> $=$ Environmental sustainability <br> Freight movement and  <br> economic vitality  <br> Infrastructure condition  <br> $=$ Reduced project delivery <br> delays  <br> $=$ Safety <br> $=$ System reliability |
| 4 | Environmental/ Energy/Quality of Life | Protect and enhance the environment, promote energy conservation, and improve quality of life by valuing the unique qualities of all communities - whether urban, suburban, or rural. | $=$ Congestion reduction <br> $=$ Environmental sustainability <br> $=$ Freight movement \& economic <br>  vitality <br> $=$ Infrastructure condition <br> $=$ Safety <br> $=$ System reliability |
| 5 | Integration and Connectivity | Enhance the integration and connectivity of the transportation system, across and between modes for people and freight, and housing, particularly affordable housing located close to transit. | ```Congestion reduction Environmental sustainability Freight movement and economic vitality Infrastructure condition Reduced project delivery delays Safety``` |
| 6 | Efficient System Management | Promote efficient system management and operation by increasing collaboration among federal, state, local government to better target investments and improve accountability. | Congestion reduction <br> Environmental sustainability <br> Freight movement and economic vitality <br> Infrastructure condition <br> Reduced project delivery delays <br> - System reliability |

| MPO Goal Number | MPO Goal <br> (also Federal <br> Transportation <br> Planning Factors) | MPO Goal Statement | National Performance Goal(s) Satisfied |
| :---: | :---: | :---: | :---: |
| 7 | System Preservation | Emphasize the preservation of the existing transportation system by first targeting federal funds towards existing infrastructure to spur revitalization, promote urban landscapes and protect rural landscapes. | Congestion reduction Environmental sustainability Freight movement and economic vitality Infrastructure condition Reduced project delivery delays <br> - Safety <br> - System reliability |
| 8 | Safety | Increase safety of the transportation system for motorized and non-motorized uses. | Congestion reduction <br> Freight movement and economic vitality Infrastructure condition Reduced project delivery delays Safety System reliability |
| 9 | Resiliency | Improve resiliency and reliability of the transportation system and reduce or mitigate stormwater impacts of surface transportation. | Congestion reduction  <br> - Environmental sustainability <br> Freight movement and  <br> economic vitality  <br> - Infrastructure condition <br> - Safety  <br> - Sestem reliability <br> Resiliency  |
| 10 | Tourism | Enhance travel and tourism. | Environmental sustainability  <br> $=$ Freight movement \& economic <br>  vitality <br> $=$ Safety <br>  System reliability |

The FAST Act also retained and strengthened federal emphasis on performance-based transportation planning. This performance-based approach is meant to improve accountability of federal transportation investments, assess risks related to different performance levels, and increase transparency. The FAST Act requires ${ }^{1}$ :

- States
- Undertake performance-based transportation planning that integrates standards and targets encompassing every national, statewide, regional and local entity
- Metropolitan planning organizations (MPOs)
- Link the investment priorities contained in the Statewide Transportation Improvement Program (STIP) and Transportation Improvement Program (TIP) to achievement of performance targets.

[^0]- Establish targets in the key national performance areas to document expectations for future performance, and document the performance targets and measures in the MPO's metropolitan transportation plan
- Coordinate these targets with states to ensure consistency to the maximum extent practicable. Metropolitan planning organizations may adopt state-identified performance targets, or federal law allows MPOs to identify their own set of performance targets for the measures.
- In their transportation plans, MPOs need to describe these performance targets, evaluate the condition and performance of the transportation system, and report on progress toward the achievement of their performance targets.
- Integrate the MPO planning process and the goals, objectives, performance measures, and targets set by the states in the strategic highway safety plan, the highway asset management plan, and the State freight plan. This integration helps deliver performance elements as part of the MPO's investment decision-making processes. Federal rules do not require explicit integration of these elements in the development of the MPO's long-range transportation plan (LRTP) nor the transportation improvement program (TIP).
- Identify how they will cooperatively implement these performance-based planning provisions with States. The MPO(s) and the State(s) must jointly agree on and document in writing the coordinated processes for the collection of performance data, the selection of performance targets for the metropolitan area, the reporting of metropolitan area targets, and the reporting of actual system performance related to those targets. The documentation must also describe the roles and responsibilities for the collection of data for the national highway system.
States or MPOs may also develop and report on additional measures; neither Minnesota nor North Dakota state statutes require MPOs to adopt state-level performance measures.
While there are federal requirements for performance-based planning, the federal rules focus on nationallysignificant near-term measures and performance. Long-term performance and local priorities, like those addressed in an MPO's long-range transportation plan (LRTP), may be better addressed through additional performance measures and targets. Federal and state rules allow for this flexibility in the MPO LRTPs.

## Vision

The vision for the Grand Forks - East Grand Forks MPO covers all modal elements for the region's transportation system. The vision was crafted during the update process for the Transit and Pedestrian/Bicycle elements of the 2045 MTP, which involved input from the Technical Advisory Committee, Policy Board, and the general public. The vision for the Grand Forks - East Grand Forks MPO is stated below:
> "A community that provides a variety of complementary transportation choices for people and goods that is fiscally constrained."

## Street and Highway Plan Goals, Objectives, Standards, Performance Measures and Targets

These goals, objectives, standards and performance measures were reviewed by GF/EGF MPO staff, staff from each state DOT, and the public. They generally reflect the needs and issues of the GF/EGF area. Additional elements of these performance measures include the provision of targets, action initiatives, and monitoring activities to ensure the next Street and Highway Plan update understands past performance and builds upon it. The Grand Forks-East Grand Forks goals are not listed in order of priority.

## Goal 1: Economic Vitality

Goal statement: Support the economic vitality through enhancing the economic competitiveness of the metropolitan area by giving people access to jobs, and education services as well as giving business access to markets.

Table 2-2: Objectives and Standards for Goal 1 Economic Vitality

| Objective | Standards |
| :---: | :---: |
| 1. Coordinate land use and transportation planning, programming, and investments between agencies. | Strengthen and connect existing communities by focusing street and highway system expansion in areas that are contiguous to currently developed areas. <br> Recognize and identify investments that support the types and locations of future development identified in the Grand Forks and East Grand Forks Land Use Plans. <br> Coordinate with local governments on the placement of regionally significant developments (e.g., ones that have a major impact on existing networks) and consider both motorized and non-motorized modes of transportation. <br> Identify prime corridors for industrial uses that are adjacent to major freight operations and truck routes, have facilities for efficient freight and goods movement, and route truck traffic away from incompatible land uses. |
| 2. Enhance the area's economic competitiveness through the movement of goods and services. | Develop and maintain roadway connectivity that is appropriate for the facility type and land-use environment. <br> Protect operational capacity of interstate and state highways through the GF/EGF MPO area and support the growth of regional intermodal freight capacity. |
| 3. Support efficient local and regional street and highway connections for freight and rail movement. | Participate in state and national freight planning efforts. <br> Build and maintain relationships with area businesses to increase the understanding of their freight needs. <br> Improve connections to freight terminals (e.g., air and multimodal), especially the last 1-2 miles of access. <br> Strategically locate freight rail improvements in areas that currently do not have freight rail access. Investments will support critical railstreet/highway connections for key regional centers and businesses to move goods and services. <br> Support integrated network of streets, roads, and highways that provide direct routes for freight and rail. |

| Objective | Standards |
| :--- | :--- |
| 4.Consider economic <br> development efforts in the <br> transportation and <br> programming process. | Invite economic development officials to collaborate in the <br> transportation system alternatives analysis process provide <br> documentation of the alternatives' screening process to local economic <br> development officials for review. <br> Recognize and respond to economic changes at the local, regional, <br> state and national level that influence the metro area's transportation <br> system. |

## Table 2-3: Performance Measures and Monitoring Activities for Goal 1 Economic Vitality

| Performance Measures | Performance Target |
| :--- | :--- |
| 1.Land use and economic <br> development initiatives <br> consistent with the LRTP <br> and TP development <br> initiatives consistent with the <br> LRTP and projects. | Ninety percent (90\%) land use and economic development initiatives <br> consistent with the LRTP and TIP projects. |
| 2.Communication/coordination <br> improvement between <br> freight operators and <br> transportation officials. | Communication/coordination improvement between freight operators <br> and transportation officials via minimum of semi-annual meetings. |

## Action Initiatives

- Document local, state and national freight initiatives that influence the region's transportation system.

## Monitoring Activities

Annually

- Track growth corridors through building permits and platting activities.
- Map the locations of major employment centers, including existing and proposed developments, and identify types of transportation available.
- Document locations and conditions of current freight routes.
- Evaluate the LRTP's effectiveness and consistency with new development and economic development decisions.
- Hold at least two joint meetings annually between the freight community and transportation agencies.
- Track number of new developments with multimodal connections.

## Every 5 Years

- Evaluate the LRTP's effectiveness and consistency with local comprehensive plans.
- Track the increase in households or jobs by TAZ to identify potential employment and residential growth areas and to assist in the prioritization of future transportation projects.
- Conduct a freight assessment of the GF/EGF MPO area and update the freight section of the LRTP.

## Goal 2: Security

Goal statement: Increase security of the transportation system for motorized and non-motorized uses.
Table 2-4: Objectives and Standards for Goal 2 Security

| Objective | Standards |
| :---: | :---: |
| 1. Identify and maintain security of critical street and highway system assets. | Support improvement projects that do not compromise the security of identified critical street and highway assets. <br> - Evaluate and manage the security of the transportation network, especially in critical areas. <br> - During security threats or events, coordinate traffic operations consistent with the Grand Forks-East Grand Forks Bridge Closure Management Plan. |
| 2. Support state and regional emergency, evacuation, and security plans. | - Incorporate state and regional emergency, evacuation, and security plans into transportation plans, project development, and project selection processes. <br> - Develop an implementation plan that responds to various disaster events that might occur within the region including evacuation routes and contingency planning. <br> - Coordinate efforts with local emergency/security/hazardous materials groups. |

Table 2-5: Performance Measures and Monitoring Activities for Goal 2 Security

| Performance Measures | Performance Target |
| :--- | :--- |
| 1.Blockage of emergency <br> transportation routes. <br> 2.Incident clearance time.Clearance time for federal aid eligible route incidents under three year <br> average of 30 minutes. |  |

## Action Initiatives

- Identify and map emergency transportation routes.
- Maintain coordination with regional/emergency/security/hazardous materials movement plans and personnel.
- Refine and update any GF/EGF MPO transportation security plans or studies.

## Monitoring Activities

## Annually

- Collect traffic incident response and clearance times.
- Collect detailed flood/emergency traffic incident information (where, when, why).
- Map future roadway projects, both capacity expansion and state of good repair, in comparison to flood prone, low lying, future land use, and critical/sensitive environments.

## Every 5 Years

- Evaluate coordination with regional/emergency/security/hazardous materials movement plans and personnel.

## Goal 3: Accessibility and Mobility

Goal statement: Increase the accessibility and mobility options for people and freight by providing more transportation choices.
Table 2-6: Objectives and Standards for Goal 3 Accessibility and Mobility

| Objective | Standards |
| :---: | :---: |
| 1. Mitigate excessive travel delays. | - Evaluate all new roadway construction and roadway reconstruction for viability of fiber installation to support future interconnection of traffic signals. <br> Fund and implement a congestion management process that identifies congestion management strategies to expand roadway capacity prior to adding more lanes on streets and highways. <br> Identify, map, report, and regularly update corridor congestion levels in the MPO area using volume, capacity, level of service, and amount of delay. <br> - Consider and implement as appropriate innovative intersection improvements, such as roundabouts, that do not stop cross traffic. |
| 2. Maintain an acceptable level of service for all streets and intersections during peak hours. | - Strive to deliver level of service C or better at intersections, including peak travel periods (with the understanding that local and state agencies accept a lower level of service D threshold for determining deficiencies at intersections). <br> Define corridor-specific level of service criteria for corridors within the metro area, including acceptable levels of congestion, and the meaning of congestion in the context of the region. |
| 3. Consider advances in autonomous vehicle and connected vehicle technology in the transportation planning and programming processes. | Participate in national and state autonomous vehicle and connected vehicle planning efforts. <br> Support implementation in autonomous vehicle and connected vehicle technology that collectively provides increased transportation options for people and freight. <br> Recognize and address autonomous vehicle and connected vehicle changes at the local, regional, state, and national level that influence the metro area's transportation system. |

Table 2-7: Performance Measures and Monitoring Activities for Goal 3 Accessibility and Mobility

| Performance Measures | Performance Target |
| :--- | :--- |
| 1. Interstate truck travel time <br> reliability | For 2020 and 2022, a ratio of 1.5 or less when comparing the 95 ${ }^{\text {th }}$ <br> percentile and 50 percentile truck travel times in five different time <br> periods throughout the day on the Interstate |
| 2. Interstate travel reliability | For 2020 and 2022, 90\% of person-miles traveled on the Interstate are <br> reliable |
| 3.Non-Interstate travel <br> reliability | For 2020 and 2022, 85\% of person-miles traveled on the non-Interstate <br> National Highway System are reliable |

## Action Initiatives

- Expand and maintain implementation of traffic counting method utilizing cameras at signalized intersection.
- Update Metropolitan Intelligent Transportation System Strategy Plan and Regional Architecture.

## Monitoring Activities

## Annually

- Track percent of roadways that are regularly congested during weekday and peak-hour periods.
- Evaluate average commute times.
- Assess travel times on key corridors.
- Conduct turning movement counts at key intersections identified in a current study or identified with possible delay of service.
- Evaluate LOS.

## Every 5 Years

- Track the volume/capacity ratios, level of service, and the amount of delay on key corridors.
- On a ten-year basis, evaluate mobile phone network origin-destination data to track trip distance, purpose, etc.; and compare against outward growth.
- Evaluate Transportation Improvement Programs (TIP)/State LRTP projects to determine their effectiveness in supporting accessibility and mobility.

## Goal 4: Environment/Energy/Quality of Life

Goal statement: Protect and enhance the environment, promote energy conservation, and improve quality of life by valuing the unique qualities of all communities - whether urban, suburban, or rural.
Table 2-8: Objectives and Standards for Goal 4 Environment/Energy/Quality of Life

| Objective | Standards |
| :---: | :---: |
| 1. Avoid, minimize, and/or mitigate adverse social, environmental, and economic impacts resulting from existing or new transportation facilities. | - Initiate corridor preservation and right-of-way acquisition procedures, to strengthen communities and avoid or minimize significant social, environmental, and economic impacts. <br> Incorporate elements of the Environmental Justice (EJ), Title IV and Limited English Proficiency (LEP) plans into the GF/EGF transportation planning process. <br> Prioritize transportation improvements that reduce existing transportation impacts on the environment through context sensitive solutions. <br> Protect, enhance, and mitigate impacts on social, natural, and economic resources when planning, constructing, operating, and maintaining transportation systems. This will include identification of priority resources through available maps, plans, and inventories, and integrating environmentally sustainable practices into street and highway design, construction, and operations. |
| 2. Maintain and improve quality of life along streets and highways. | Work with land use authorities to develop and implement context sensitive projects that incorporate placemaking and "complete streets" principles on new and existing roadways in the GF/EGF MPO area. Tactics may include traffic calming. Identify and avoid, minimize, and mitigate the impact that transportation and development projects have on historical sites and areas of cultural or historical significance. <br> Plan and implement a transportation system that considers the needs of all potential users, including children, senior citizens, and persons with disabilities, and that promotes active lifestyles and cohesive communities. A special emphasis should be placed on promoting the environmental and health benefits of alternatives to single-occupancy vehicle travel. |
| 3. Maintain and improve regional air quality. | Provide and promote alternatives to single occupancy vehicle travel through the implementation of traffic demand management strategies, such as carpooling, vanpooling, telecommuting, walking, bicycling, and travel by public transit. <br> Evaluate air quality monitoring on a regular basis and incorporate mitigation strategies in all transportation and land use plans. Conduct a regional Greenhouse Gas (GHG) Inventory. Recognize the role of transportation choices in reducing emissions and support state and regional goals for reducing greenhouse gas and air pollutant emissions. |

Table 2-9: Performance Measures and Monitoring Activities for Goal 4 Environment/Energy/Quality of Life

| Performance Measures | Performance Target |
| :---: | :---: |
| 1. Transportation-related CO 2 emissions. | By 2045, reduce transportation-related CO2 emissions by 10 percent below 2010 levels. A reduction of 17,579 tons of transportation- related CO 2 emissions is needed every five years. |
| 2. Time/cost of project delivery. | - Reduce the time/cost of project delivery by 20 percent. |
| 3. Population characteristics such as low income, minority percentage, gender, disabled percentage and percentage having Limited English Proficiency (LEP) | - Maintain EJ, Title VI, LEP plans to ensure they reflect current and future demographics, as well as community needs |

## Action Initiatives

- Reach agreements/MOUs on linking the planning process with the environmental permitting to reduce the time/cost of project delivery.
- Improve livability by applying measures such as:
- Context sensitive design including matching design speeds, traffic calming elements, lane widths, and non-motorized elements to surrounding land uses on roadways and bridges
- Delivering integrated street/highway construction projects that address bicycle, pedestrian, transit, and other infrastructure elements in one construction project
- Coordinating transportation construction projects to avoid simultaneous construction on facilities that serve as alternate routes

## Monitoring Activities

## Annually

- Monitor the percent of transportation investment in EO \#12898 Environmental Justice census tracts and evaluate any disproportional impacts as defined EO \#12898.
- Evaluate the effectiveness of traffic calming measures.
- Evaluate EJ, Title VI, and LEP plans' effectiveness in supporting the GF/EGF MPO's transportation planning process.
- Distribute information through PSAs, Public Presentations, and awareness campaigns.

## Every 5 Years

- Evaluate sustainability principles and their effectiveness with TIP projects.
- Conduct a greenhouse gas inventory of transportation related emissions.
- Update EJ, Title VI and LEP plans.
- Evaluate timeline from planning process to delivery of transportation projects to determine linkage between planning and environmental permitting.
- Maintain a list and location of environmentally sensitive properties.
- Evaluate whether agreement/MOUs were reached.

## Goal 5: Integration and Connectivity

Goal statement: Enhance the integration and connectivity of the transportation system, across and between modes for people and freight, and housing, particularly affordable housing located close to transit.
Table 2-10: Objectives and Standards for Goal 5 Integration and Connectivity

| Objective |  |
| :--- | :--- |
| 1. Effectively coordinate <br> transportation and land use <br> by promoting the <br> sustainability and livability <br> principles, goals, and <br> objectives from local land <br> use plans. | Identify priority corridors and nodes for infill development, densification, <br> or transit-oriented development. <br> Increase the use of multi-modal transportation by providing additional <br> transit service and reducing bicycle/pedestrian network gaps. <br> Promote transportation improvements that support access to <br> employment centers, especially those that provide a mix of employment <br> opportunities (e.g. jobs and income levels). <br> Promote higher land use densities. |

Table 2-11: Performance Measures and Monitoring Activities for Goal 5 Integration and Connectivity

| Performance Measures | Performance Target |
| :---: | :---: |
| 1. Daily vehicle miles traveled | By 2045, reduce daily vehicle miles traveled per capita by 10 percent <br> below 2010 levels. A reduction of approximately 2,885 daily vehicle <br> miles traveled is needed every year. |

## Action Initiatives

- Maintain a functional classification system that identifies the proper adjacent land uses, access control, traffic signal spacing and truck routes.
- Assess land use plans to examine how they affect transportation.

## Monitoring Activities

## Annually

- Measure the amount of new streets and lane miles added within the region by functional classification.
- Track growth corridors through building permits and platting activities.
- Track land development patterns and map potential compact developments that may be supported by multimodal transportation.
- Review all development proposals.
- Obtain daily vehicle miles travelled data.

## Every 5 Years

- Collaborate with local agencies to track the outward expansion of development through statistical and visual means.
- Assist in the update in land use plan.

## Goal 6: Efficient System Management

Goal statement: Promote efficient system management and operation by increasing collaboration among federal, state, local government to better target investments and improve accountability.
Table 2-12: Objectives and Standards for Goal 6 Efficient System Management

| Objective | Standards |
| :---: | :---: |
| 1. Implement best practice programming and innovative financing alternatives. | Include inflation in project cost estimates and report project costs for the forecast year(s) of expenditure. <br> Identify, track, and pursue alternate funding sources and financing tools to fund local transportation projects, maintenance, and operations. Innovative funding alternatives may include public/private partnerships. For projects significantly benefitting private entities, develop and implement a cost sharing model to help fund street or highway projects. Assess developers for the costs of street and highway improvements associated with new developments, where appropriate. |
| 2. Involve all local partners in the transportation planning process. | - Collaborate with economic development, transit providers, housing providers, workforce, and other agencies whose clients impact the transportation network to deliver projects that benefit people, businesses, and freight. <br> Participate and invite nontraditional partners in the transportation planning process. <br> Execute agreements necessary (e.g., MOUs, cost sharing, service contracts, etc.) to facilitate regional traffic management strategies. Incorporate environmental stewardship considerations and environmental agency coordination into the planning and implementation of transportation improvements. Collaborate with local and state agencies in setting performance measures and targets for urban and rural areas. |
| 3. Cooperate across jurisdictional boundaries to create an integrated transportation network. | Establish multijurisdictional protocols for special events (e.g., events and parades). <br> Encourage region-wide coordination among traffic, emergency, and maintenance agencies (e.g., police, fire, DOTs, and public works). Continue to develop and maintain a regional travel demand forecast model for use in forecasting future corridor levels of service. Encourage member jurisdictions to continue participation in the GF/EGF MPO's transportation planning activities. |
| 4. Maintain and update the regional ITS architecture | Implement, where applicable, Active Transportation Demand Management techniques using existing and/or new ITS infrastructure. Develop and implement coordinated signal timings between jurisdictions and along new corridors. invest in ITS infrastructure that can record travel times, traffic volumes, turning movements, and other various data points. <br> Implement, where appropriate, monitoring systems as part of transportation facilities, such as bridges that monitor fatigue, tampering, or failure |

Table 2-13: Performance Measures and Monitoring Activities for Goal 6 Efficient System Management

|  | Performance Measures |
| :--- | :--- |
| Performance Target |  |
| 1.Comparison of programmed <br> dollar amounts to actual <br> obligated dollar amounts. | Have no greater than 25 percent variance when comparing <br> programmed dollar amounts to the actual obligated dollar amounts for <br> projects listed in the GF/EGF MPO TIP. |
| 2.Public Participation Plan - <br> attendance at meetings, <br> prior notice, key points of <br> decision. | Increase the effectiveness of the GF/EGF MPO Public Participation <br> Plan in informing, education and engaging the public in transportation <br> decisions. |

## Action Initiatives

- None

## Monitoring Activities

## Annually

- Compare the actual project expenditures to the amounts programed in the local and state investment plans (e.g., CIPs and STIPs). These comparisons should assist in determining whether cost adjustments may be appropriate in the annual listing of obligations identified in the TIP.
- Evaluate the cost sharing opportunities for transportation projects.
- Conduct a customer satisfaction survey through various means of outreach (e.g., online, mailings and open houses). This activity should be done on an annual or bi-annual basis.
- Compare annually the amount of obligated funds to actual expenditures for projects listed in the GF/EGF MPOTIP.

## Every 5 Years

- Evaluate the GF/EGF MPO's Public Participation Plan and its effectiveness under federal and state guidelines to engage community members and stakeholders from various groups.
- Evaluate the Long Range Transportation Plan for its effectiveness in public-private partnerships.
- Evaluate the Financial Planning Forecast in the LRTP.

## Goal 7: System Preservation

Goal statement: Emphasize the preservation of the existing transportation system by first targeting federal funds towards existing infrastructure to spur revitalization, promote urban landscapes and protect rural landscapes.
Table 2-14: Objectives and Standards for Goal 7 System Preservation

| Objective | Standards |
| :--- | :--- |\(\left.\quad \begin{array}{l}Inform project finance planning and fiscal constraints by identifying all <br>

1. Identify sufficient funding for <br>
the program of projects <br>
included in GF/EGF MPO <br>
transportation plans. <br>
Identify funding that can be used for operations, maintenance, and <br>
facility construction. <br>
Assign more likely construction, operation, and maintenance funding to <br>
near-term projects. <br>
Document funding used for "State of Good Repair" projects and <br>

document whether a "State of Good Repair" for the federal\end{array}\right\}\)| transportation system can be currently maintained. |
| :--- |
| Provide technical assistance to local jurisdictions in applying for state |
| and federal funding programs. |

Table 2-15: Performance Measures and Monitoring Activities for Goal 7 System Preservation

| Performance Measures | MPO Performance Target |
| :---: | :---: |
| 1. Percent of Interstate pavement in good condition | - 75.6\% |
| 2. Percent of Interstate pavement in poor condition | - 3\% |

| Performance Measures | MPO Performance Target |
| :---: | :---: |
| 3. Percent of non-Interstate NHS pavement in good condition | ```North Dakota 58.3\% Minnesota - Two-year target: 50\% - Four-year target: 50\%``` |
| 4. Percent of non-Interstate NHS pavement in poor condition | North Dakota $=3 \%$ Minnesota $=\quad$ Two-year target: $4 \%$ Four-year target: $4 \%$ |
| 5. Percent of NHS Bridges in good condition | ```North Dakota - 60% Minnesota \| Two-year target: 50% - Four-year target: 50%``` |
| 6. Percent of NHS bridges in poor condition | ```North Dakota 4\% Minnesota - Two-year target: \(4 \%\) - Four-year target: 4\%``` |

## Action Initiatives

- Develop a common pavement condition reporting system for the Interstate and non-Interstate National Highway System in North Dakota and Minnesota
- Maintain and update the Pavement Management Systems for the metro area so it can be utilized to guide decisions on which type of pavement work makes best use of funds available to ensure state of good repair and reduce yearly average maintenance costs by evaluating the effectiveness and costbenefit of preservation and maintenance projects.
- Incorporate and evaluate bridge inspection reports into biennial performance reports.

## Monitoring Activities

## Annually

- Track the number "ride-quality deficient roadway" miles and "distress deficient roadway" miles in the GF/EGF region and compare to overall Grand Forks County, Polk County, MnDOT and NDDOT system.
- Track the percentage of federal funds programs that is put toward existing and new infrastructure.

## Every 2 Years

- Review bridge inspection report.

## Every 5 Years

- Update pavement system for metro area.
- Evaluate Transportation Improvement Programs (TIP)/State LRTP projects to determine their effectiveness in achieving system preservation.

## Goal 8: Safety

Goal statement: Increase safety of the transportation system for motorized and non-motorized uses.
Table 2-16: Update Objectives and Standards for Goal 8 Safety

| Objective | Standards |
| :---: | :---: |
| 1. Keep vehicles from encroaching on the roadside in rural areas | - Continue to install shoulder rumble strips, edge lines, "profile marking" edge line rumble strips, modified shoulder rumble strips, 6 -inch edge lines, or embedded wet-reflective pavement markings on section with narrow or no paved shoulders. <br> Continue to install enhanced shoulders, lighting, delineation (for example, Chevrons), or pavement markings for sharp horizontal curves in rural areas. <br> Continue to install improved highway geometry for horizontal curves. Increase skid-resistance pavement surfaces. <br> Continue to install shoulder treatments. <br> Eliminate shoulder drop-offs from paved road to unpaved shoulder. Shoulder edge. <br> Widen and/or pave shoulders. |
| 2. Minimize the likelihood of crashing into an object or overturning if the vehicle travels off the shoulder in rural areas | Continue to install safer slopes and ditches to prevent rollovers. Remove/relocate objects in hazardous locations. |
| 3. Reduce the likelihood of a head-on vehicle collision in rural areas | Continue to install centerline rumble strips and 6-inch center lines for two-lane rural roads. <br> Continue operation of alternating passing lanes or four-lane sections at key locations. <br> Continue to install cable median barrier for narrow-width medians and multilane roads. <br> Continue operation of buffer space between opposite travel directions. Continue to install directional medians. |
| 4. Reduce frequency and severity of intersection conflicts through traffic control and operational improvements in urban areas | Continue operation of multiphase signal operation. <br> Optimize clearance intervals. <br> Restrict or eliminate turning maneuvers (including right turns on red). <br> Continue operation of signal coordination along a corridor or route. <br> Continue operation of emergency vehicle preemption <br> Continue to install countdown timers, advanced walk phase, and other <br> low-cost pedestrian/bicycle facility improvements. <br> Remove unwarranted signals. <br> Continue to supplement conventional red-light running enforcement with traffic signal confirmation lights and other technology enhancements that support enforcement efforts. |
| 5. Reduce the severity of the crash | Continue to improve design and applications of barrier and systems to maintain flow of traffic. |

| Objective | Standards |
| :---: | :---: |
| 6. Improve efficiency and effectiveness of aggressive driving/speed enforcement efforts | - Strengthen speed detection and public perceived risk of being stopped and ticketed through sustained, well-publicized, highly visible speed enforcement campaigns. <br> Conduct highly visible, publicized and saturated enforcement campaigns at locations with higher incidence of aggressive driving/speed related crashes. <br> Enact/support legislation to strengthen penalties such as increased fines for right-of-way and speed violations. <br> Strengthen the adjudication of speeding citations to enhance the deterrent effect of fines. <br> - Address the perception of widespread speeding by heavy vehicles by first conducting a statewide assessment of commercial vehicle speeds. In response to the assessment results, examine enforcement, safety education, and outreach safety strategies for priority regions or corridors identified as needing improvement. |
| 7. Review crash data | - Continue to analyze data to clearly define aggressive driving and identify factors contributing to aggressive driving. |
| 8. Set and communicate appropriate speed limits | - Continue to implement active speed warning signs, including dynamic message boards at rural to urban transitions, school zones, and work zones. <br> - Continue operation of in-pavement measures to communicate the need to reduce speeds. |
| 9. Ensure that roadway design and traffic control elements support appropriate and safe speeds | - Effect safe speed transitions through design elements and on approaches to lower speed areas. |
| 10. Improve sight distance at signalized and unsignalized intersections | Continue to clear sight triangles. <br> Redesign intersection approaches. <br> Change horizontal and/or vertical alignment of approaches to provide more sight distance. <br> Eliminate parking that restricts sight distance. |
| 11. Improve driver awareness of intersections and signal control | - Continue to improve visibility of intersections by providing enhanced signing, delineating, overhead indications, 12 -inch lenses, background shields, or pavement markings/messages. <br> Continue to call attention to intersections by installing rumble strips on intersection approaches. <br> Continue to improve visibility of intersections by providing appropriate street lighting. <br> Continue to install larger regulatory and warning signs at intersections, including the use of dynamic warning signs at appropriate intersections. Continue to provide dashed markings (extended left edge lines) for major road continuity across the median opening at divided highway intersections. |

| Objective | Standards |
| :---: | :---: |
| 12. Improve management of access near signalized and unsignalized intersections | Continue to restrict or eliminate parking on intersection approaches. <br> Expand driveway closure/relocations. <br> Provide longer left-turn lanes at intersections. <br> Expand driveway turn restrictions. <br> Continue to install left-turn lanes at intersections. <br> Continue to offset left-turn lanes at intersections. <br> Continue to install bypass lanes on shoulders at T-intersections. <br> Continue to provide acceleration lanes at divided highway intersections. <br> Continue to install right-turn lanes at intersections. <br> Continue to offset right-turn lanes at intersections. <br> Expand to provide right-turn acceleration lanes at intersections. <br> Expand channelized or closed median openings to restrict or eliminate turning maneuvers. <br> Close or relocate "high-risk" intersections. <br> Continue to convert four-legged intersections to two T-intersections. <br> Realign intersection approaches to reduce or eliminate intersection skew. <br> Continue to improve pedestrian and bicycle facilities to reduce conflict between motorists and nonmotorized travelers. <br> Convert 2-lane intersection to 3-lane intersection. |
| 13. Choose appropriate intersection traffic control to minimize crash frequency and severity | Continue to construct roundabouts at appropriate locations. - Currently occurring at intersections in Grand Forks: 23th St \& 40th Ave S, 34th St \& 24th Ave. |
| 14. Improve the roadway and driving environment to better accommodate drivers' needs | Expand the use of advanced guide signs and street name signs. Continue to increase sign and letter heights of roadway signs. Provide more all-red clearance intervals at signalized intersections. Provide more protected left-turn signal phases at high-volume intersections. <br> - Continue to improve lighting at intersections, horizontal curves, and railroad grade crossings. <br> - Continue to improve roadway delineation. <br> Continue to reduce intersection skew angle. |
| 15. Improve Sight Distance and/or Visibility Between Motor Vehicles and Pedestrians/Bicyclists | Continue to provide crosswalk enhancements. <br> Continue to implement lighting/crosswalk illumination measures <br> Continue to eliminate screening by physical objects. <br> Expand signals to alert motorists that pedestrians/bicyclists are crossing. <br> - Continue to improve reflectivity/visibility of pedestrians/bicyclists. |
| 16. Reduce Vehicle Speed | ```Continue to implement road narrowing measures. Continue to install traffic calming-road sections. Continue to install traffic calming-intersections. Continue to provide school route improvements.``` |
| 17. Improve Motorist Safety Awareness and Behavior | - Continue to provide education, outreach, and training. <br> Continue to implement enforcement campaigns. |
| 18. Reduce Effect of Hazards | - Fix or remove surface irregularities. |

| Objective | Standards |
| :---: | :---: |
| 19. Implement a multimodal transportation system that is balanced and integrated with all transportation modes to ensure safe and efficient movement of people and goods | Minimize congestion on roadways and at intersections. Maintain roadway and other Level of Senvice standards consistent with regional, county, and municipal comprehensive plans. <br> Provide a balanced system with viable multi-modal options that are consistent with local comprehensive plans. <br> Provide infrastructure that supports transportation (transit riders, pedestrians, bicyclists and other alternative transportation modes). Improve intermodal connectinity and access to intermodal facilities (e.g., airports, transit centers, Interstate bus system, rail, etc.) and activity centers. <br> Provide more sidewalks and bikeways. Improve public transit services so they are efficient, frequent, reliable, convenient, safe, easy to use and understand, and promotes other intermodal uses. |
| 20. Increase the safety and security of the transportation system for motorized and non-motorized users | Provide for safer travel by all transportation modes, including pedestrian, bicycling, transit, and automobile. Encourage measures that reduce congestion. Encourage strategies that improve emergency response to crash. |
| 21. Reduce the number, severity, and rate of crashes compared to previous years by type of vehicle and transportation facility. | Identify and maintain a database and map of frequent or severe crash locations by transportation facility within the MPO area (intersections, road segment, bicycle/pedestrian facility, and bicycle/pedestrian vehicle conflict point). The database will include number, type, and severity of crashes. <br> Identify and implement, where possible, intersection treatments that reduce crashes. <br> Support policies that prohibit/penalize distracted driving. Identify funding available to improve the safety of the roadway system. Coordinate with local, county, and state agencies to develop education, public health, engineering, and enforcement strategies targeted at crash reduction. <br> Support the region's vision of moving toward zero traffic fatalities and serious injuries, which includes supporting educational and enforcement programs to increase awareness of regional safety issues, shared responsibility, and safe behavior. |

Table 2-17: Performance Measures and Monitoring Activities for Goal 8 Safety

| Performance Measures | Performance Target |
| :---: | :---: |
| 1. Number of traffic fatalities | - 3 or fewer traffic fatalities by 2018 No change in trend |
| 2. Number of fatalities per 100 million vehicle miles traveled | - 0.673/mvmt or lower by 2018 <br> - No change in trend |
| 3. Number of crash-related serious injuries | - $\quad 18$ or fewer serious injuries by 2018 Decline in trend |

| Performance Measures |  |  |
| :--- | :--- | :--- |
| Number of serious injuries <br> per 100 million vehicle miles <br> traveled | Performance Target <br> Decline in trend |  |
| 5. |  |  |
| Number of non-motorized <br> fatalities and non-motorized <br> serious injuries | 3 or fewer non-motorized fatal and serious injury crashes by 2018 <br> Decline in trend |  |

## Action Initiatives

- Adopt Vision Zero by 2045
- Update state-, county-, and local-level strategic highway safety plans in cooperation with the MPO - Conduct travel training as needed

## Monitoring Activities

## Annually

- Establish safety performance targets in cooperation with state DOTs and local road authorities
- Evaluate intersection crash frequency for all nodes with significant commuter and freight traffic volumes, and compare to critical crash rates.
- Evaluate crash severities.
- Review crash data.
- Identify vehicle crash locations that would benefit from changes in traffic or pedestrian signal operations, raised medians, street lights, and signage.
- Evaluate Highway Safety Improvement Program (HSIP) priorities and their effectiveness in addressing GF/EGF MPO safety needs.
- Report the number of times travel training programs were conducted.

## Every 5 Years

- Evaluate Transportation Improvement Programs (TIP)/State LRTP projects to determine their effectiveness in achieving safer roadway system.

## Goal 9: Resiliency and Reliability

Goal statement: Improve resiliency and reliability of the transportation system and reduce or mitigate stormwater impacts of surface transportation.

Table 2-18: Objectives and Standards for Goal 9 Resiliency

| Objective | Standards |
| :---: | :---: |
| 1. Reduce street and highway system vulnerability to snow and storm water | - Maintain passable streets and highways under all reasonable weather conditions. <br> - Strategically design and maintain the street and highway system to operate under all reasonable weather conditions. <br> - Assess and mitigate any possible impacts new roadway construction may have on high water events, including proximity to waterways, construction in wetlands or floodways, storm drainage, etc. |
| 2. Support the region's resilience and travel reliability through efficient detour and evacuation routes | During river flood events, reroute traffic consistent with the Bridge Closure Management Plan, or revised to respond to significant, observed delays or changes. <br> - Be trained in and use established alternate routes and intelligent transportation systems (ITS) to maintain street and highway operations during incidents and temporary street or highway blockages. <br> - Provide auxiliary power sources to operate traffic signals when mainline power is interrupted. |

## Action Initiatives

- Establish agreements with local agencies on reporting closures and time length of closure.

## Monitoring Activities

## Annually

- Monitor the weather-related closure interruptions.
- Identify locations experiencing frequent closure.

Every 5 Years

- Update Bridge Closure Management Plan.
- Develop a Traffic Incident Management Plan.

## Goal 10: Tourism

Goal statement: Enhance travel and tourism.
Table 2-19: Objectives and Standards for Goal 10 Tourism

| Objective | Standards |
| :--- | :--- |
| 1.Maintain convenient and intuitive street and <br> highway access to major activity centers | Develop and use event traffic management plans <br> for major activity centers such as the Alerus |
|  | Center, Ralph Engelstad Arena, and Greater |
|  | Grand Forks Greenway including the Red River <br>  <br>  <br>  |
|  | State Recreation Campground. <br> Identify, coordinate, and communicate traffic plans <br> for simultaneous events. |

## Action Initiatives

- Develop agreements for data on event traffic management plans.

## Monitoring Activities

## Annually

- Assemble report on event traffic results.

## Every 5 Years

- Review and update as needed any event traffic management plans.

## Chapter 3. Existing Conditions

This chapter summarizes existing street/highway conditions for the Grand Forks-East Grand Forks Metropolitan Planning Organization (MPO) area. Planning for the long-term needs of the MPO's street and highway system requires a solid understanding of the various inputs and characteristics that define the function of the current system. Several topics including demographics and land use, street/highway system characteristics, traffic and safety patterns, freight networks, and a summary of recommendations from recent studies are discussed.

## Demographics and Land Use

Located in northeast North Dakota and northwest Minnesota, the MPO planning area encompasses the cities of Grand Forks, ND and East Grand Forks, MN. It also includes areas beyond each city that are anticipated to be urbanized it the next 20-years in Grand Forks County, ND and Polk County, MN. See Figure 3-13 for the MPO planning area.

According to the U.S. Census (2010), the populations for the cities of Grand Forks and East Grand Forks were 52,838 and 8,602 , respectively. Since 2010, Grand Forks has increased its population by four percent while East Grand Forks has remained close to the 2010 estimate. The 2015 American Community Survey estimates the Grand Forks population at 54,944 and the East Grand Forks population at 8,611; a combined population of 63,555 . See Figure 3-2 for population estimates in both cities between 2010 and 2015.

Figure 3-13: MPO Planning Area

Source: Grand Forks-East Grand Forks MPO

Figure 3-2: Grand Forks and East Grand Forks Populations, 2010 to 2015

Source: US Census, American Community Survey
Table 3-1 provides population forecasts to the year 2045 identified in recently adopted land use plans for the cities of Grand Forks and East Grand Forks. The Grand Forks population forecasts are based upon a 1.2 percent annual growth rate, and the East Grand Forks population forecasts are based upon a 0.9 percent annual growth rate. In total, the region's population is forecasted to increase by approximately 39 percent between 2015 and 2045.

Table 3-1: Population Forecasts

| City | 2010 <br> (US Census) | 2015 ACS <br> Estimate | 2025 | 2035 | 2045 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Grand Forks | 52,838 | 54,944 | $60,247^{\star}$ | $67,879^{\star}$ | $76,479^{\star}$ |
| East Grand <br> Forks | 8,601 | 8,611 | $9,841^{\wedge}$ | $10,764^{\wedge}$ | $11,773^{\wedge}$ |
| Total | 61,439 | 63,555 | 70,088 | 78,643 | 88,252 |

*1.2 percent growth rate assumed per 2045 Grand Forks Land Use Plan
ヘ. 9 percent growth rate assumed per 2045 East Grand Forks Land Use Plan
Source: 2045 Grand Forks Land Use Plan, East Grand Forks 2045 Land Use Plan

## Race

Racial composition for both Grand Forks and East Grand Forks is predominantly white (90.7 and 94.9 percent, respectively), as shown in Table 3-2. While minority populations remain low overall, these populations have increased since 2000 in Grand Forks and remained near similar levels in East Grand Forks.

Table 3-2: Race Composition Percentage

| City | White | Black or <br> African <br> American | American <br> Indian and <br> Alaska <br> Native | Asian | Native <br> Hawaiian <br> and Other <br> Pacific | Some other <br> race |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Grand Forks | $90.7 \%$ | $3.7 \%$ | $4.7 \%$ | $3.2 \%$ | $0.2 \%$ | $1.1 \%$ |
| East Grand <br> Forks | $94.9 \%$ | $3.7 \%$ | $3.3 \%$ | $1.4 \%$ | $0.1 \%$ | $0.6 \%$ |

Source: 2015 American Community Survey

## Age

Grand Forks and East Grand Forks are younger than the United States and their respective state average. The median age is 37.6 years in the United States, 35.4 years in North Dakota, and 37.7 years in Minnesota. In comparison, the median age in Grand Forks is just 28.5 years while in East Grand Forks it is 34.1 years. With the University of North Dakota located in Grand Forks, a younger median adult population is expected. Since 2000, the age groups that have seen the largest percentage of increase are young adults (age 20-35) and senior citizens (age 55+). The aging baby boomer population is expected to have a major impact on the transportation network at the regional and national level. As the elderly age, they become less mobile and more reliant on family, friends, taxis, and public transportation to get around. This, along with recent trends in technology and retail, may result in increases in delivery and on-demand services, such as home delivery of everything from medication to groceries.
Figure 3-3: Age Group

Source: 2015 American Community Survey

## Income

According to the 2015 American Community Survey (US Census Bureau), the median household income in Grand Forks is $\$ 46,149$, while in East Grand Forks the median household income is $\$ 55,590$. Both Grand Forks
and East Grand Forks have lower median household incomes compared to their respective states (\$57,181 for North Dakota and \$61,492 for Minnesota).
In terms of poverty, 20 percent of all Grand Forks residents have incomes below the poverty line, compared to 10.6 percent in East Grand Forks. Both states have about 11.5 percent of individuals below the poverty level. The income and poverty levels for Grand Forks may be reflective of the high number of college students present in the community. These individuals commonly hold part-time and lower income jobs as they work though school.

## Environmental Justice

Executive Order 12898 directs Federal agencies to take appropriate and necessary steps to identify and address disproportionately high and adverse effects of Federal projects, including the transportation planning process, on the health or environment of minority and low-income populations to the greatest extent practical and permitted by law. USDOT Order 5610.2(a) sets forth the USDOT policy to consider environmental justice (EJ) principles in all (USDOT) programs, policies, and activities. It describes how the objectives of EJ will be integrated into planning and programming, rulemaking, and policy formulation. The Order sets forth steps to prevent disproportionately high and adverse effects to minority or low-income populations through Title VI analyses and EJ analyses conducted as part of Federal transportation planning and NEPA provisions. Disproportionate is defined in two ways: the impact is predominantly borne by the minority or low income population group, or the impact is appreciably more severe than that experienced by non-minority or non-low income populations.
The MPO addresses Environmental Justice to ensure non-discrimination concerning enacted transportationrelated laws, regulations, and policies. The MPO has developed an Environmental Justice Program Manual designed to provide guidance in meeting EJ mandates and structuring a public participation plan at the project or study level. To certify compliance with, and to address environmental justice, the MPO:

- Identifies residential, employment, and transportation patterns of low-income and minority populations so that their needs can be identified and addressed, and the benefits and burdens of transportation investments can be fairly distributed.
- Ensures that the long-range transportation plan and the transportation improvement program (TIP) comply with the tenets of Environmental Justice.
- Utilizes public involvement processes to eliminate participation barriers and engage minority and low income populations in transportation decision making.
According to the most recent Environmental Justice Program Manual, minority populations in Grand Forks were most concentrated east of Columbia Mall between 24th Avenue South and 32nd Avenue South and north of Grand Cities Mall between 13th Avenue South and 17th Avenue South. Concentrations of poverty greater than 50 percent are also located near the two shopping centers, as well as near both downtown areas. See Figure 3-4 for the Environmental Justice Populations map. These areas will be evaluated further to determine whether any disproportionate or adverse effects would occur due to the Range of Alternatives and potential future regionallysignificant transportation improvements.

Figure 3-4: Environmental Justice Populations

Source: Grand Forks-East Grand Forks MPO

## Workplace and Commuting Patterns

According to the 2015 American Community Survey, most people both live and work within the Grand Forks-East Grand Forks urbanized area. With over 35,000 jobs combined in the two cities in 2014, most employment nodes are located within Grand Forks. Major industry sectors include health care, education, retail, hospitality/food services, and manufacturing. The predominant travel mode for employers is the automobile. The mean travel time to work is under 13 minutes for Grand Forks residents and 14.5 minutes for East Grand Forks residents. MPO data indicates approximately 4,000 East Grand Forks residents commute to Grand Forks for work and approximately 4,000 Grand Forks residents commute to East Grand Forks for work.

Table 3-3: Workplace Location and Travel Patterns

|  | Percent of <br> People that <br> Live and Work <br> in Same City | Percent of <br> People that <br> Live and Work <br> in Same <br> County | Travel to <br> Work via <br> Automobile | Drive <br> Alone | Mean Travel <br> Time to Work |

## Land Uses

The recently adopted 2045 Grand Forks Land Use Plan (2016) emphasizes creating a more compact urban environment, encouraging infill development, creating mixed use areas, and coordinating development with the location of urban services. The Plan utilized the federal Ladders of Opportunity Initiative, which builds on the foundations of sustainable and livable communities to connect low-income and minority transit-dependent residents with economic and educational resources that already exist within the Grand Forks community. The Plan supports mixed use, compact development patterns which provide more transportation choices and strives to increase the share of non-automobile trips.
With a focus on more compact development, the 2045 Grand Forks Future Land Use Plan (Figure 3-5 and Figure $3-6$ ) reallocates and reduces overall acreages for the City's growth tiers compared to the 2040 Future Land Use Map. The three-level tier system for managing timing and sequencing of growth includes: Tier 1 (including existing city limits), where all projected growth within the planning horizon will be accommodated; Tier 2 (Urban Reserve Area), which only allows residential development on existing platted lots and if no other Tier 1 land is available; and Tier 3, agricultural preservation area. The 2045 Future Land Use Map is intended to prevent "sprawl" and to create a pattern of development which provides efficient growth creating quality compact urban places including improved accessibility and mobility. Growth is focused primarily to the south and west of the City adjacent to existing land uses.

The East Grand Forks 2045 Land Use Plan (Figure 3-7 and Figure 3-8), also recently adopted in 2016, promotes compact, infill development and responsible greenfield development. The City of East Grand Forks utilizes the existing flood protection system as an interim growth boundary, with phased land available to accommodate anticipated growth within the planning horizon. The Plan includes three new land use categories: mixed use, commercial/industrial, and medium density residential. Mixed use districts, whether utilized for infill or greenfield development, will enable the City to become more compact and walkable, provide the choice for a living arrangement that is different from that which dominates in neighborhoods of single-family detached housing, and soften transitions between higher and lower intensity land uses. East Grand Forks growth is focused primarily north along TH 220, to the east along US Highway 2 and also to the south of Rhinehart Drive near the Red River.

Both the 2045 Grand Forks Land Use Plan and the East Grand Forks 2045 Land Use Plan incorporated livability principles into their planning processes in order to enhance the livability of the community while improving access to employment, goods and services. Livable communities provide a mix of affordable housing, increase
transportation options, and lower transportation costs while protecting the environment. Linking transportation and land development results in neighborhoods that are more prosperous, allow people to live closer to jobs, save households time and money, and reduce pollution. The following six principles of livability were utilized as developed by the federal Partnership for Sustainable Communities:

- Provide more transportation choices;
- Promote equitable affordable housing;
- Enhance economic competitiveness;
- Support existing communities
- Coordinate and leverage federal policies and investment; and
- Value communities and neighborhoods.

## Natural and Environmental Resources

There are numerous environmentally-sensitive areas found throughout the Grand Forks-East Grand Forks region. An overview of some of the identified sensitive areas, including wetlands, species of concern, and identified cultural sites, is provided in Figure 3-9.

Many of these sensitive areas are too small or too numerous to map at a metropolitan-level and can only be clearly identified through a project-level analysis. Some areas are yet to be identified and will only become known once a project-level analysis is completed. When a programmed project is ready to move into the design and engineering phase, the project sponsor will be responsible for conducting the necessary analyses as required by state and federal regulations to determine the type, location, and impact to environmentally sensitive areas within the project study area.

Figure 3-9: Environmental Constraints

Source: Grand Forks-East Grand Forks MPO

## Carbon Footprint

A pound of carbon dioxide $\left(\mathrm{CO}_{2}\right)$ emitted today from a gas powered motorized vehicle may still be in the atmosphere decades to hundreds of years from now. Therefore, measuring greenhouse gases associated with transportation systems is closely linked to $\mathrm{CO}_{2}$. However, this level of assessment is difficult to measure, considering data availability and scale. To evaluate change over time in the metropolitan area's carbon footprint from a transportation perspective, the analysis from the 2040 Street and Highway Plan was updated to compare the number of vehicle miles traveled (VMT) for passenger cars and light trucks.

The assessment looked at 2015 and 2010 VMT data. VMT was extrapolated out to determine an estimate for GHG emissions (see Table 3-4). The results document an increase in VMT between 2015 and 2010. VMT had been leveling off nationwide since the economic recession in 2008. However, low gas prices and an improved economy have led to increases in VMT. Long-term trends are uncertain due to changes in energy production, improved gas mileage and increased electrification/hybrid technologies in new vehicles, and the potential impact of ride sharing and automated technologies. Therefore, VMT should be continually monitored to determine if travel behaviors are changing within the region.
Table 3-4: Carbon Footprint for Vehicle Miles Traveled
$\left.\begin{array}{|l|c|c|c|c|}\hline & & & \begin{array}{c}\text { Gallons of } \\ \text { Fuel } \\ \text { Consumed } \\ \text { by Year by } \\ \text { Total Vehicle-Miles } \\ \text { Traveled by Year by } \\ \text { Passenger Cars and } \\ \text { Light Trucks }\end{array} & \begin{array}{c}\text { Average Miles } \\ \text { of Travel per } \\ \text { Gallon of Fuel } \\ \text { Consumed }\end{array}\end{array} \begin{array}{c}\text { Carsand } \\ \text { Light } \\ \text { Trucks }\end{array} \quad \begin{array}{c}\text { Metric Tons of Carbon } \\ \text { Dioxide or CO } \\ \text { Equivalent }\end{array}\right]$

Source: FHWA Highway Statisticsfor Urbanized Areas2015 and 2010
https://www.epa.gov/energy/greenhouse-gases-equivalencies-calculator-calculations-and-references

In the region, the increase in VMT resulted in an increase in carbon emissions over the five-year period. This increase is quantified into measurable outcomes by using the Environmental Protection Agency's (EPA) Greenhouse Gas Equivalent Calculator (see Table 3-5). For example, the increase in VMT and $\mathrm{CO}_{2}$ equated to the 258 additional passenger vehicles on the transportation network annually. The increase in $\mathrm{CO}_{2}$ emissions results in an increase in the metropolitan area's carbon footprint from an environmental perspective.

[^1]Table 3-5: Carbon Footprint Equivalence

|  | Carbon Footprint Equivalence for VMT from Passenger Cars and Light <br> Trucks of Value Increase from 2015 to 2010 |
| ---: | :--- |
| 258 | Annual $\mathrm{CO}_{2}$ emissions from the number of passenger vehicles |
| 135,366 | $\mathrm{CO}_{2}$ emissions from the number of gallons of gasoline consumed |
| 2,785 | $\mathrm{CO}_{2}$ emissions from the number of barrels of oil consumed |
| 15.9 | $\mathrm{CO}_{2}$ from the number of tanker trucks worth of gasoline |
| 6.6 | $\mathrm{CO}_{2}$ emissions from burning of the number of railcars worth of coal |

## Street/Highway System

There are several ways to evaluate and characterize roadway networks. As a summary of the existing street/highway system characteristics for the Grand Forks-East Grand Forks MPO area, the following topics are discussed in this section:

- Jurisdiction
- Number of Roadway Lanes
- Functional Classification
- Federal Aid Roadways
- Pavement Condition
- Bridge Condition

## Jurisdiction

Roadway jurisdiction refers to the agency responsible for owning and maintaining a roadway. Roadway jurisdiction often closely corresponds with roadway functional classification to ensure that the system adequately distributes traffic to the appropriate roadway. For example, state owned roads (interstates and trunk highways) typically accommodate higher traffic volumes and longer-distance trips between population centers. County owned roads accommodate moderate traffic volumes and serve regional trips, while city and township provide lower traffic volumes to serve localized trips.
Figure 3-10 shows the breakdown of roadways by jurisdiction for the region and Table 3-6 summarizes roadway mileage by jurisdiction. The following agencies own and maintain the region's public roadways.

- State
- North Dakota Department of Transportation
- Minnesota Department of Transportation
- County
- Grand Forks (ND)
- Polk (MN)
- City
- Grand Forks (ND)
- East Grand Forks (MN)
- Township
- Brenna (ND)
- Falconer (ND)
- Grand Forks (ND)
- Rye (ND)
- Walle (ND)
- Bygland (MN)
- Grand Forks (MN)
- Huntsville (MN)
- Rhinehart (MN)
- Sullivan (MN)

Figure 3-10: Existing Roadway Jurisdiction

Source: Grand Forks-East Grand Forks MPO

Table 3-6: System Mileage by Roadway Jurisdiction

| Jurisdiction | State |  | County |  | Township |  | City |  | Total |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Miles <br> $(\mathrm{mi})$ | Percent <br> $(\%)$ | Miles <br> $(\mathrm{mi})$ | Percent <br> $(\%)$ | Miles <br> $(\mathrm{mi})$ | Percent <br> $(\%)$ | Miles <br> $(\mathrm{mi})$ | Percent <br> $(\%)$ | Miles <br> $(\mathrm{mi})$ | Percent <br> $(\%)$ |
| North <br> Dakota | 37.6 | $10.8 \%$ | 23.3 | $6.7 \%$ | 58.0 | $16.6 \%$ | 230.4 | $66.0 \%$ | 349.3 | $100 \%$ |
| Minnesota | 18.1 | $12.7 \%$ | 21.3 | $15.0 \%$ | 42.2 | $29.7 \%$ | 60.6 | $42.6 \%$ | 142.2 | $100 \%$ |
| MPO Study <br> Area | 55.7 | $11.3 \%$ | 44.6 | $9.1 \%$ | 100.2 | $20.4 \%$ | 291.0 | $59.2 \%$ | 491.5 | $100 \%$ |

Source: Grand Forks-East Grand Forks MPO
North Dakota state statutes limit the state highway system mileage to not exceed seven percent all public roads in the state. County highways eligible for federal aid funds are also limited to 22,500 miles statewide by statute. These rules impact the ability to change the roadway jurisdiction and designation of roadways as they change in function due to growing cities and changing traffic patterns.

## Number of Roadway Lanes

A summary of the number of lanes by centerline lane-miles are described in Table 3-7 and displayed in Figure 3-11. Four lane roadways include the major north-south arterials (l-29, Columbia Road, Washington Street) and east-west arterials (US 2, DeMers Avenue, $32^{\text {nd }}$ Avenue). Over 90 percent of roadways within the region have two-lanes.

Table 3-7: Centerline Lane Miles

| Roadway Type | Four Lanes | All Others | Total |
| :--- | :---: | :---: | :---: |
| North Dakota | 32.7 | 316.6 | 349.3 |
| Minnesota | 7.6 | 134.6 | 142.2 |
| MPO Study Area | 40.3 | 451.2 | 491.5 |

[^2]Figure 3-11: Existing Number of Roadway Lanes

Source: Grand Forks-East Grand Forks MPO

## Functional Classification

The functional classification system groups roadways into classes based on roadway function and purpose. Functional classification is based on both transportation and land use characteristics, including roadway speeds, access to adjacent land, connection to important land uses, and the length of trips taken on the roadway. The functional classification system organizes a roadway and street network that distributes traffic from local neighborhood streets to collector roadways, then to minor arterials and ultimately the principal arterial system. Roads are placed into categories based on the degree to which they provide access to adjacent land and mobility for through traffic. Functional classification gives an indication of the relative hierarchy of roadways in the transportation network.

The MPO has grouped roadways into six classes of roadways: interstate, principal arterial, minor arterial, major collector, minor collector, and local. Figure 3-12 shows the functional classification system for the region. Table 3-8 provides the total centerline miles for each functional classification category.

The MPO works in partnership with each state transportation agency (NDDOT and MnDOT) to periodically review the statewide Functional Classification System. Comprehensive reviews are undertaken approximately every 10 years. MnDOT recently updated its Functional Classification System for greater Minnesota (including the MPO area) in 2015 to reflect guidance revisions made by FHWA in 2013.

Figure 3-12: Roadway Functional Classification

Source: Grand Forks-East Grand Forks MPO

Table 3-8: System Mileage by Functional Classification

| Totals by State | Interstate | Principal <br> Arterial | Minor <br> Arterial | Major <br> Collector | Minor <br> Collector | Local | All <br> Roads |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| North Dakota <br> side | 16.2 | 24.4 | 38.5 | 52.2 | 4.0 | 213.9 | 349.3 |
| Minnesota side | - | 8.2 | 15.9 | 16.3 | 8.8 | 92.9 | 142.2 |
| Total Miles | 16.2 | 32.6 | 54.4 | 68.5 | 12.8 | 306.8 | 491.5 |

Source: Grand Forks-East Grand Forks MPO
Guidelines have been established by the FHWA for an approximate mix of roadway functional classifications within an urban area. Table 3-9 presents these federal guidelines and compares them to the functional classification mileage totals for the metropolitan area. System ratios of functional classification mileage are consistent with FHWA guidance.
Table 3-9: Functional System Summary Compared to FHWA Guidelines

| Facility Type | MPO Area | FHWA Urban Guidance* |
| :--- | :---: | :---: |
| Principal Arterials (including Interstates) | $10 \%$ | $5-14 \%$ |
| Principal Arterials plus Minor Arterials | $21 \%$ | $12-28 \%$ |
| Collectors | $17 \%$ | $6-32 \%$ |
| Local Streets | $62 \%$ | $62-74 \%$ |

*Source: FHWA Highway Functional Classification Concepts, Criteria and Procedures, 2013 Edition - Rural Statesand Urban System Ranges Used (Rural Statesare Defined as Having 75\% of Their Population in Urban Centers)
https://www.fhwa.dot.gov/planning/processes/statewide/related/highway_functional_classifications/section03.cfm

## Federal Aid Roadways

The National Highway System (NHS) includes the interstate highway system as well as other arterial roadways important to the nation's economy, defense, and mobility. The NHS was developed in the 1990s by the U.S. Department of Transportation in cooperation with the states, local officials, and metropolitan planning organizations (MPOs). MAP-21 legislation converted existing principal arterials to be part of the National Highway System and limited the total system to a defined mileage. This limits the ability to expand the number of Principal Arterial mileage within the MPO area.

Figure $3-13$ shows the NHS system and other federal aid eligible roadways within the MPO area. "NHS Roads" include roads with the Interstate and Principal Arterial functional classification. "Other Federal Aid Roadways" include Minor Arterials, Major Collectors, and Minor Collectors within the urbanized area. Per updated FHWA guidance in 2015, Minor Collectors in rural areas are no longer federal aid eligible. Local roads are not eligible for federal aid.

Figure 3-13: Federal Aid Roads

Source: Grand Forks-East Grand Forks MPO

## Pavement Condition

Pavement condition data is collected periodically to assist in monitoring the quality of the street and highway system and to help determine the appropriate level of rehabilitation needed for particular segments. The most recent pavement condition data were available for Grand Forks roadway segments in 2013 and East Grand Forks segments in 2015. Table 3-10 and Figure 3-12 present estimated average pavement condition index ( PCl ) values for each city based on the available data. The average system wide pavement condition has decreased from 2008 levels in Grand Forks. Pavement condition within East Grand Forks has increased on average since 2008.
Table 3-10: Pavement Trends by Pavement Condition Index (PCI)

| Year | Grand Forks <br> Average PCI | East Grand <br> Forks <br> Average PCl | Grand Forks <br> Weighted Average <br> PCI | East Grand Forks <br> Weighted Average <br> PCI |
| :--- | :---: | :---: | :---: | :---: |
| $\mathbf{1 9 9 9}$ | 63.9 | 67.2 | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| $\mathbf{2 0 0 3}$ | 86.3 | 87.0 | 78.1 | 74.9 |
| $\mathbf{2 0 0 8}$ | 76.7 | 76.8 | 82.0 | 79.9 |
| Current | $72.7(2013)$ | $79.2(2015)$ | $69.9(2013)$ | $82.0(2015)$ |

Source: Grand Forks-East Grand Forks MPO
Table 3-11 summarizes the percentage of current pavement condition for the GF/EGF MPO area by general pavement condition categories (good, satisfactory, fair, poor, very poor).
Table 3-11: Current MPO Pavement Condition Index (PCI)

| Pavement <br> Condition | GF/EGF MPO Area |  | MN-Side |  | ND-Side |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Local <br> Roads | State <br> Roads | Local <br> Roads | State <br> Roads | Local <br> Roads | State <br> Roads |
| Good | $35 \%$ | $7 \%$ | $24 \%$ | $9 \%$ | $40 \%$ | $<1 \%$ |
| Satisfactory | $21 \%$ | $7 \%$ | $7 \%$ | $4 \%$ | $27 \%$ | $13 \%$ |
| Fair | $17 \%$ | $21 \%$ | $2 \%$ | $0 \%$ | $24 \%$ | $72 \%$ |
| Poor | $7 \%$ | $0 \%$ | $2 \%$ | $0 \%$ | $9 \%$ | $0 \%$ |
| Very Poor | $<1 \%$ | $0 \%$ | $<1 \%$ | $0 \%$ | $<1 \%$ | $0 \%$ |
| No Data | $21 \%$ | $66 \%$ | $64 \%$ | $87 \%$ | $0 \%$ | $14 \%$ |

Source: Grand Forks-East Grand Forks MPO
The above referenced table represents PCI data provided by the Ctiy of Grand Forks (2013) and the City of East Grand Forks (2016) and is incomplete. After considerable research with MnDOT, NDDOT, the City of Grand Forks, the City of East Grand Forks, Grand Forks County and Polk County, it was determined that pavement condition data derived from a consistent methodology with consistent metrics of meaure does not currently exist for the GF/EGF MPO planning area.

Figure 3-14 on the following page combines 7 different pavement condition data sets with different collection methodologies and condition rating metrics. This map provides a visual generalization of pavement condition for the entire GF/EGF MPO planning area.

Figure 3-14: Pavement Condition

Source: Grand Forks-East Grand Forks MPO

## Existing Bridge Conditions

Area bridges are inspected on a regular basis by the respective State Departments of Transportation. Following an inspection, a sufficiency rating is given to each bridge. The sufficiency rating is a means of quantifying a bridge's ability to remain in service. Sufficiency rates are conducted biannually. The rating scale is 0 to 100 , with 100 considered an entirely sufficient bridge and 0 an entirely deficient bridge. The sufficiency rating formula includes factors for structural condition, bridge geometry, and traffic considerations. Prior to the FAST Act and MAP-21, a bridge with a sufficiency rating of 80 or less was eligible for Federal Bridge Rehabilitation funding. A bridge with a sufficiency rating of 50 or less is eligible for Federal Bridge replacement funding. Under the Fast Act, Federal Bridge Funds were combined into the Surface Transportation Block Grant Program (STP).

As part of the inspection, it is also noted if bridges are found to be functionally obsolete or structurally deficient. Bridges that are functionally obsolete may be in good condition, but do not meet current engineering design standards. A bridge is identified as structurally deficient if one or more load carrying elements is found to be deficient. The fact that a bridge is classified under the Federal definition of "structurally deficient" does not imply that it is unsafe. A structurally deficient bridge, when left open to traffic, typically requires regular maintenance and repair in service and may eventually require rehabilitation or replacement to address the deficiencies. To remain in service, structurally deficient bridges are often posted with weight limits to restrict the gross weight of vehicles using the bridges to less than the maximum weight allowed by statute.

Figure 3-15 and Table 3-12 show the sufficiency ratings and locations of the bridges in the MPO area. Of the 49 bridges in the area, 35 have sufficiency ratings greater than 80,10 have sufficiency ratings between 80 and 50 , and 4 have sufficiency ratings less than 50 .

## Existing Traffic Conditions

Current traffic patterns and the operations of the street and highway network are summarized in the following sections.

## Traffic Volumes

Figure 3-16 shows the range of year 2015 average daily traffic volumes for the roadway system. Arterial roadways that provide connections across Grand Forks and along commercial centers experienced the highest traffic volumes. These arterials include Interstate 29, US 2/Gateway Drive, DeMers Avenue, $32^{\text {nd }}$ Avenue, Columbia Road, and Washington Street. These roadways have four lanes and are intended to carry higher traffic volumes to serve regional trips.

Since 2005, South Washington Street, South Columbia Road, and $32^{\text {nd }}$ Avenue South have experienced increases in traffic volumes as Grand Forks has continued developing south of $32^{\text {nd }}$ Avenue South. On South Washington Street, 2015 traffic volumes range from around 22,000 vehicles per day near $32^{\text {nd }}$ Avenue South to around 30,000 vehicles per day near DeMers Avenue. South Columbia Road experiences around 26,000 vehicles per day between $24^{\text {th }}$ Avenue South and DeMers Avenue. Between South $42^{\text {nd }}$ Street and South Washington Street, $32^{\text {nd }}$ Avenue South experiences around 20,000 vehicles per day.

Figure 3-16: Existing Traffic Volumes

Source: Grand Forks-East Grand Forks MPO. Note: Ranges reflect planning-level roadway capacity volumesfor two-lane (up to 12,000 ), three-lane divided (up to 17,000), four-lane undivided (up to 22,000 ), and four-lane divided (up to 32,000) roadways

## Existing Intersection Level of Service

The ability of an intersection to accommodate traffic is affected by the number and type of vehicles, desired turning movements, intersection geometrics, and traffic control devices. Intersection Level of Service (LOS) is defined as the delay to vehicles caused by the intersection's traffic control. Intersection LOS typically focuses on operations during the peak periods of the day that experience the highest traffic volumes. Thus, the intersection LOS analysis gives a "worst case" result for each intersection and more clearly identifies operational problems at the intersections.

The intersection operational analysis process includes determining the LOS for the key intersections under the existing peak hour traffic conditions. Many jurisdictions consider LOS D as the lowest acceptable LOS for urban intersections. NDDOT had not historically, but now does also consider LOS D as acceptable at urban intersections. Figure 3-17 presents the intersection LOS thresholds, in terms of seconds of vehicle delay, as defined in the Highway Capacity Manual.

Figure 3-17: Level of Service

Source: Highway Capacity Manual
To evaluate intersection level of service (LOS) along important regional corridors, 50 intersections were identified by MPO staff. In addition, previous studies were reviewed to document the results of 11 recent intersection LOS analyses. The evening (p.m.) peak period was selected for evaluation as this timeframe generally experiences the highest traffic volumes. The 61 evaluated intersections and LOS results are listed in Table 3-13 and mapped in Figure 3-18. Overall, the system's intersections generally operate within LOS A-C conditions. There are four intersections where a LOS D was recorded (S. Columbia Road \& $17^{\text {th }}$ Avenue S., S. Columbia Road \& $32^{\text {nd }}$ Avenue S., S. Washington Street \& DeMers Avenue, and N. $42^{\text {nd }}$ Street \& University Avenue when trains are present). No intersections were recorded with a LOS E or F.

Three intersections that were recorded at LOS D in the 2040 Street/Highway Plan Update have seen a decrease to LOS C or B. They are S. Washington Street \& $17^{\text {th }}$ Avenue S., S. Washington Street $\& 32^{\text {nd }}$ Avenue S., and Central Avenue NE (TH 220) \& Gateway Drive.

* Intersection LOS as documented from recent studies
** Without/with trains

Figure 3-18: Intersection Level of Service

## Existing Roadway Segment Level of Service

The regional travel demand forecast model prepared by the Advanced Traffic Analysis Center (ATAC) for the Street and Highway Plan identified existing LOS for key roadway segments within the MPO area. The model utilized roadway characteristics and 2015 average daily traffic volumes to determine LOS via a volume to capacity ratio. This analysis identified three road segments experiencing LOS D:

- South Columbia Road between 11th Avenue South and DeMers Avenue
- South Columbia Road between 17th Avenue South and Knight Drive
- South Washington Street between 8th Avenue South and DeMers Avenue

There were no segments that were identified as a LOS E or F as part of this analysis. See Figure 3-19 for a map of LOS by roadway segment.

Figure 3-19: 2015 Level of Service by Road Segment

## Safety/Crash Analysis

When Moving Ahead for Progress in the 21st Century Act (MAP-21) was passed in 2012, the law regarding the connection between safety planning and long range transportation planning changed from "should be consistent with" to "shall integrate." With this new requirement, the relationship between statewide Highway Safety Improvement Programs and Strategic Highway Safety Programs strengthened, and all levels of transportation planning have now taken steps towards integrating strategic safety planning into plans.

Traditionally, safety improvement locations were determined by using a site-specific approach: a safety analysis that identified high-crash locations (also known as dark spots) based off historical crash trends. Safety funding would then be utilized to improve those specific areas.

Recently, a systemic approach to safety has been emphasized in transportation planning. The systemic safety approach is a technique that supplements the site-specific approach by identifying roadway characteristics that lead to severe and fatal crashes. Instead of solely taking a reactive approach to safety by improving areas where crashes have already occurred, the systemic approach introduced a proactive approach by improving high-risk roadways before crashes occur. Planning bodies in both Minnesota and North Dakota have already begun the integration process on a statewide level and are currently updating their safety plans. For more information regarding safety planning, please refer to these plans.
The passage of MAP-21introduced two changes from programs in the past: increased safety-specific funding and the use of penalties. Previously, safety funds within the state of North Dakota had been apportioned from the Urban Roads Program fund pool, but safety is now funded by a stand-alone program. The state of Minnesota also funds transportation safety through a stand-alone program. MAP-21 also introduced a financial penalty for states that do not make significant progress in improving safety.
In the late 1990's, the American Association of State Highway and Transportation Officials (AASHTO) developed a recommended safety program development process that sorted crash data into twenty-two emphasis areas. Those emphasis areas were further divided up into six categories: drivers, special users, vehicles, highways, emergency service, or management. By utilizing the systemic approach, transportation agencies identify projects that specifically cater to one or more emphasis area.

## Site-Specific Crash Analysis

The existing site-specific traffic safety analysis for the Grand Forks-East Grand Forks MPO area was based on evaluation of crash data available from the NDDOT and MnDOT. Due to current limitations in accessing 2016 or later crash data for Minnesota communities, crash data for the four-year period from January 1, 2012 to December 31, 2015 was used for the analysis.
A total of 48 intersections were identified that experienced 12 or more crashes during the four-year analysis period. The average crash rate for these intersections was approximately 0.7 crashes per million entering vehicles (MEV), and was consistent between Grand Forks and East Grand Forks. The 48 identified intersections with 12 or more crashes are shown in Figure 3-20.
Spatial aggregation processing was performed to collect crashes associated with intersections. Total traffic passing through the intersection was then computed using NDDOT and MnDOT AADT (Annual Average Daily Traffic) data, and then an intersection crash rate was computed for each location.
To evaluate the performance and condition of intersections, grounded on computed crash rates, Expected Crash Rate tables from MnDOT Green Sheets were used. The expected crash rates for similar intersections from the MnDOT Green Sheets were applied to crashes occurring in both North Dakota and Minnesota to ensure consistency in the safety analysis and since NDDOT does not offer similar crash analysis tools. MnDOT Expected Crash Rate tables classify state-wide averages of crash rates and other parameters for different classes of intersections and segments. These parameters are computed separately for three years, five years, and ten years of historic crash data. Since this analysis was based on four years of crash data, an average of three-year and five-year tables were used to compare results. Based on the AADT and segments information for the
intersections, expected crash rates were calculated and compared for each intersection. A total of 26 intersections were found to have crash rates above the expected crash rates. The attached tables summarize the types of crashes occurring at each of these 26 locations and how expected crash rates compare to actual crash rates.

Based on the information in Table 3-14, two types of crashes are more frequent than other types:

- Angle or Turn Crashes: Angle and turn crashes accounted for approximate 54 percent of total crashes in the metropolitan area.
- Rear End Crashes: Rear end crashes accounted for approximately 32 percent of total crashes in the metropolitan area.
The number of severe crashes for the intersections that have higher than expected crash rates are listed in Table $3-15$. Based on this analysis, it was found that:
- Three intersections experienced over 50 crashes during this timeframe. They were: S. $34^{\text {th }}$ Street \& $32^{\text {nd }}$ Avenue S. (64), N. $42^{\text {nd }}$ Street North \& DeMers Avenue (60), and S. $31^{\text {st }}$ Street \& $32^{\text {nd }}$ Avenue $S$ (52).
- There were no fatal incidents reported in any of the high crash rate intersections from 2012-2015.
- 31 percent of the total crashes that occurred at the high crash rate intersections involved injury related crashes.

In June 2017, NDDOT provided results of a statewide Highway Safety Improvement Program (HSIP) crash analysis for urban intersection crash locations using updated 2014-2016 crash data. Nine intersections were identified in Grand Forks in the top 50 statewide intersections for most crashes. These intersections and rankings include: S. Columbia Road \& $17^{\text {th }}$ Avenue S. (10), S. $34^{\text {th }}$ Street \& $32^{\text {nd }}$ Avenue S. (11), S. Washington Street \& $17^{\text {th }}$ Avenue S. (14), Washington Street \& DeMers Avenue (24), S. $20^{\text {th }}$ Street and $32^{\text {nd }}$ Avenue S. (26), S. Columbia Road \& $32^{\text {nd }}$ Avenue S. (31), S. $31^{\text {st }}$ Street \& $32^{\text {nd }}$ Avenue S. (40), S. Washington Street \& $32^{\text {nd }}$ Avenue S. (44), and DeMers Avenue \& N. $42^{\text {nd }}$ Street (46).

Both state DOT agencies develop strategic statewide highway safety plans with recommended strategies to improve roadway safety. Incorporating these plans and strategy approaches into the future projects and performance measurements will help address current safety issues in the MPO area.

## System-Wide Crash Analysis

An additional safety analysis was performed as the MPO developed its targets for the safety performance measures as the region works toward no fatalities by 2045. The analysis identified findings and trends for number of traffic fatalities, fatality rate, number of serious injuries, serious injury rate, and number of non-motorized fatalities and serious injuries throughout the system.

## Number of Traffic Fatalities

The annual number of fatalities ranged from 0 to 4 between 2007 and 2015. Over this time period, the region experienced a declining trend in the number of fatalities. The five-year rolling average ranged from 1.8 to 2.6 with a declining trend of 0.04 per year. For 2018, the region established a target of 3 or fewer traffic fatalities with no change in the declining trend, as described in Chapter 2.

## Traffic Fatality Rate

The traffic fatality rate per 100 million vehicle miles traveled (mvmt) is also declining for the region. Between 2007 and 2015, the five-year rolling average ranged from $0.550 / \mathrm{mvmt}$ to $0.795 / \mathrm{mvmt}$ with a declining trend of 0.0122 per year. For 2018, the region established a target of $0.673 / \mathrm{mwnt}$ or lower with no change in the declining trend.

## Number of Crash-Related Serious Injuries

The annual number of traffic crash-related and life-altering serious injuries ranged from 8 to 24 between 2007 and 2015. Over this time period, the region experienced a rising trend in the number of serious injuries. The five-year rolling average ranged from 15 to 19.4 with a rising trend of 1.2 per year. For 2018, the region established a target of 18 or fewer serious injuries with a decline in the trend.

## Serious Injury Rate

The traffic crash-related serious injury rate per 100 million vehicle miles traveled (mumt) is rising for the region. Between 2007 and 2015, the five-year rolling average ranged from 4.587/mumt to $5.933 / \mathrm{mvmt}$ with a rising trend of 0.367 per year. For 2018, the region established a target of $5.933 / \mathrm{mvmt}$ or lower with no change in the declining trend.

## Number of Non-M otorized Fatalities and Serious Injuries

The annual number of non-motorized fatalities and serious injuries ranged from 0 to 5 between 2007 and 2015. Over this time period, the region experienced a rising trend in the number of non-motorized fatalities and serious injuries. The five-year rolling average ranged from 2.4 to 3.4 with a rising trend of 0.18 per year. For 2018, the region established a target of 3 or fewer non-motorized fatalities and serious injuries with a decline in the trend.

## Systemic Safety Approach

In keeping with MAP-21's requirement to integrate the systemic safety approach into transportation plans, the Grand Forks - East Grand Forks MPO incorporated crash data and performance measures from safety plans and programs in North Dakota and Minnesota. A common criticism of the site-specific/black spot safety approach found earlier in this section is that once all crashes are taken into account, locations with high traffic volumes tend to be over-represented. The systemic approach seeks to alleviate that problem by focusing on risk factors that may not have already caused - but have the potential to cause-severe or fatal traffic crashes. Together, the two safety approaches are complementary to developing a safety plan that is both reactive and proactive in reducing crashes. Adding systemic improvements is a low-cost process that yields high benefits in the long run.
The Federal Highway Administration recommends four steps in the systemic safety planning process. After selecting the focus crash type, it is necessary to answer the question "where are the crashes occurring?" The FHWA recommends utilizing a crash tree diagram to approach this question.
(http://safety.fhwa.dot.gov/systemic/fhwasa13019/element1.cfm)

Figure 3-21: FHWA System Safety Planning Process

## Source: Federal Highway Administration

For the systemic-based crash assessment, crash trees were utilized from both North Dakota and Minnesota plans. Most applicably, the North Dakota Local Road Safety Program specific to Grand Forks, the Polk County Safety Plan, and the Minnesota DOT District 2 Highway Safety Plan provided crash trees that further the understanding of crashes that have not been identified by the site-specific approach. Although the data accounts for more than just the MPO area, the crash trees still remain relevant in identifying roadway characteristics that can be alleviated by the systemic approach to highway safety.

The crash trees highlighted below signify the dynamics of crashes that occurred in Grand Forks County and Polk County from 2008-2012. Unlike the dark spot approach described above - which has been criticized for overemphasizing intersection crashes - these trees represent the types and severities of crashes in addition to intersection crashes.

After creating region-specific crash trees, NDDOT and MnDOT identified the most common roadway characteristics that present a potential risks for each of these crashes. From there, a list of countermeasures were identified and applied to specific roadway segments that exhibited those characteristics. The project applications in both North Dakota and Minnesota reflect those identified roadway segments, and have been incorporated into Chapter 8 to determine appropriate performance measures for the LRTP.

## Crash Trees

For the Grand Forks County crash tree analysis, data was taken from 5,041 crashes that occurred in a 5-year period from 2008 to 2012. The Polk County crash tree analysis utilized data from 1,535 crashes that occurred between 2007 and 2011. The District 2 (Minnesota) crash tree analysis used data from 3,975 crashes between 2006 and 2010. For each of these crash data sets, five years of data was examined to prevent the possibility of examining an abnormal year, as well as reduce the chance for signific ant changes in roadway conditions such as reconstructed roads or changed speed limits. The Grand Forks County and Polk County crash trees below reflect the crashes by road type, area, and crash type category, while the District 2 crash trees reflect the crashes by area and then crash type.

## Source: MnDOT District 2 Highway Safety Plan

Based on the data found in each of these crash trees, the states of North Dakota and Minnesota have identified projects that focus on crucial AASHTO emphasis areas. Primarily, roadway agencies have the most control in reducing crashes that related to infrastructure-based emphasis areas such as lane-departure crashes and intersection crashes. As a result, the projects strictly adhere to improvements that relate to roadway conditions.

There are two criteria that are examined to identify candidates for safety investments: high-crash locations and atrisk locations. A crash analysis identifies locations with serious crashes, and then evaluates basic roadway characteristics of locations with serious crashes. Those characteristics - also called risk factors - are then used to determine the risk of future crashes. Rather than wait for a location to become a "dark spot," the systemic approach addresses those risk factors to reduce the potential for serious and fatal crashes.

The maps below detail the results from identifying low-cost, safety-related infrastructure projects focused on safety emphasis areas. Specifically, projects were developed based off high priority rural and urban improvements.

- In Grand Forks County, high-priority rural roadway projects addressed the most common type of serious segment-related crash: a single-vehicle, lane departure crash. High-priority rural curve projects focused on enhancing curve delineation, reducing rear-end and head-one crashes, and reducing rightangle crashes.
- In Polk County, high priority rural roadway projects were developed that specifically targeted edge improvements and enhanced delineation. In both rural and urban areas, there was an effort to develop projects that upgraded signs and pavement markings, installed street lights, and improved visibility at unsignalized intersections.
- In Minnesota District 2, projects were developed that targeted the most practical solutions to rural areas: improvements to the edges and centerlines of rural highways, enhanced delineation of horizontal curves in rural areas, realignment of intersections to reduce skew, upgrading signs and pavement marking, installing street lights, clearing sight triangles, and providing ITS warning systems at rural STOP controlled intersections.

## Freight

The Grand Forks-East Grand Forks MPO area includes multi-modal infrastructure for transporting goods. The street and highway network along with the Grand Forks International Airport and multiple railroad corridors connect the region to national and international transportation systems.

## Key Freight Routes

NDDOT adopted its North Dakota State Freight Transportation Plan in 2015. On the North Dakota side of the GF/EGF MPO, there are a number of roadways that serve as part of critical state and national freight routes for the movements of goods. Figure 3-33 and Figure 3-34 below illustrates NDDOT's State Strategic Freight System of Highways. As illustrated, in the Grand Forks area, Interstate I-29 and US Highway 2 are both identified as Level 1 Strategic Highways. These highways are also part of the National Freight Network and connect North Dakota with domestic and foreign markets. An extension of the National Freight Network for urban areas are Urban Critical Freight Corridors. Figure 3-35 on the following page illustrates critical urban freight corridors in the Grand Forks area including Gateway Drive, DeMers Avenue, Washington Street, Columbia Road, $32^{\text {nd }}$ Avenue South, among others.
Figure 3-33: NDDOT Strategic Freight System - Highways

Figure 3-34: NDDOT Strategic Freight System - Highways - Grand Forks Urbanized Area

Source: NDDOT

Figure 3-35: Critical Urban Freight Corridors - Grand Forks Urbanized Area

Source: NDDOT
MnDOT has developed a 2017 Minnesota State Freight Investment Plan that identifies Critical Urban Freight Corridors and Critical Rural Freight Corridors. This investment plan identifies $\$ 100$ million of FAST-Act federal freight funds that will be programmed for freight projects from FY 2019 thru FY 2022. None of these funds are programmed for the GF/EGF MPO planning area. In 2018, a Minnesota Statewide Freight System Plan was also developed. Figure 3-36 on the following page illustrates the National Highway Freight System in Minnesota from the 2017 Minnesota State Freight Investment Plan. As illustrated, there are no currently designated National Freight System roadways in the East Grand Forks area. Also, MnDOT has not identified any Critical Urban Freight Corridors or Critical Rural Freight Corridors in the East Grand Forks area.

It should be noted that unlike Minnesota where there is a federal set-a-side and statewide competition for federal freight projects using FAST-Act freight funds, in North Dakota, there is not a separate federal freight project solicitation and funding process. In North Dakota, freight projects identified as part of the NDDOT Strategic Freight System or the Urban Critical Freight System must compete for and be funded through the standard state and federal funding programs available to other projects.

## Metro Truck Routes

The movement of goods and senvices by truck is facilitated by designated truck routes within the metro area (see Figure 3-37). However, truck routes are designated differently between the States of North Dakota and Minnesota. In Minnesota, truck routes include any roadway designated as a Municipal State Aid (MSA) route. In North Dakota, State law allows specific designation of truck routes. In Grand Forks these special designations have been assigned to Gateway Drive, DeMers Avenue, Washington Street, $32^{\text {nd }}$ Avenue South, and Mill Road. Trucks may travel on any road off the designated truck route only when they are at the intersection to their destination and then must follow the reverse route back to that intersection on the designated truck route. Grand Forks also has prohibited trucks over a certain weight from traveling on the Columbia Road overpass and the Point Bridge. For the Columbia Road overpass, the weight limit is 20,000 pounds gross weight and for the Point Bridge the weight limit is 40,000 pounds gross weight.

## Metro Truck Volumes

Figure 3-38 represents year 2015 truck traffic counts taken in Grand Forks by NDDOT on certain roadways and 2012 truck traffic counts taken in East Grand Forks by MnDOT (state highways only). Truck trips are significant during harvest season in the Grand Forks-East Grand Forks region. In 2012, for example, harvest truck trips were
documented as part of turning movement counts collected along South Washington Street. This count documented a total of 316 trucks along South Washington Street and 119 of the 316, or approximately 38 percent, were beet trucks.

## Metro Truck Safety

According to the US DOT, approximately 12 percent of all motor vehicle crashes in the United States involve large trucks. Comparatively, large trucks were involved in 116 of 5,425 total crashes in the Grand Forks-East Grand Forks metro area from 2012 to 2015, or approximately 2 percent of all crashes. The density and total number of truck related crashes is summarized in Figure 3-39 and Table 3-16. Most truck related crashes occurred along US Highway 2/Gateway Drive over this period-of-time.

## Metro Rail Lines

The majority of railroad tracks in the region are owned and operated by the BNSF Railway Company (BNSF). These routes provide access through North Dakota to the west coast, through Minnesota to Chicago, and south to the Gulf of Mexico. BNSF also owns and operates the DeMers railyard just north of DeMers Avenue and south of the University of North Dakota campus. It is one of the main rail yards in North Dakota. At the yard, empty cars are dropped off, and cars full of commodities are staged in sections along multiple lines of track before being heading to their destination. Additionally, the Mill Spur and other minor spur connections provide industrial rail access and link the region's industrial land uses to BNSF's national railroad network. The region's railroad network is shown in Figure 3-40. Amtrak also operates its Empire Builder line on the BNSF lines, providing daily rail passenger service to Chicago and Seattle.

Minimizing the traffic delay at rail crossings is important, especially for truck freight movement in the metro area and across the nation. FHWA reports that unexpected delays (by train blockages) can drive up the cost of freight transport by 50 to 250 percent, hindering the ability of a region's transportation system to effectively meet freight demands. The movement of various agricultural products, especially sugar beets, via trucks from field processing or transshipment points can also be disrupted by train traffic. Balancing the movement of goods and services between multiple modes of transportation is a challenging task and requires coordination and collaboration between public and private sectors. Two problematic at-grade rail crossings for truck traffic delays associated with unit train traffic and train blockages are the Glasston Subdivision crossing at US Highway 2 and the Grand Forks Subdivision crossing near the intersection of DeMers Avenue and North $42^{\text {nd }}$ Street.

## Metro Rail Crossings

Regarding traffic operations, rail movement plays a significant role in the overall transportation system of the Grand Forks-East Grand Forks region. Currently, there are 45 at-grade railroad crossings, 20 of which have crossing signs only; 9 crossings have signs and flashers; and 16 have crossing signs flashers and gates (see Figure 3-41). In 2010, the Grand Forks-East Grand Forks MPO conducted a quiet zone assessment for the metropolitan area, which led to a recommended crossing improvement plan for 4 at-grade crossings in East Grand Forks and 11 at-grade crossings in Grand Forks. The MPO and respective cities continue to work toward implementing these quiet zones throughout the metropolitan area.

## Freight Businesses

The region's economy consists of several industries, regional shopping centers, and manufacturing facilities that rely on the freight system to move goods within and out of the region. In addition, the region serves as a hub collecting agricultural commodities from northeast North Dakota and northwest Minnesota. Several large freight users are identified in Figure 3-42. Among these, the largest freight generators include American Crystal Sugar, North Dakota State Mill, and BNSF Railway.

Heavy commercial vehicles are highly dependent on the US Highway 2 corridor with the unrestricted load crossing of the Red River, via Kennedy Bridge, and connections to the American Crystal Sugar plant. During the annual beet harvest, daily heavy commercial volumes can exceed 1,500 trucks per day at the intersection of US Highway 2/US Business 2 and US Highway 2/County Road 17. The geometrics of the corridor intersections need to support these vital movements to support the economics of East Grand Forks and the region. American Crystal Sugar, Bert's Truck Equipment, Todd's Trailer Sales and Lumber Mart are a few of the businesses along the US Business 2 corridor that depend on heavy commercial traffic movement.

The regional sugar beet harvest stretches from September to October of each year, generating over 4,500 heavy commercial traffic movements per day destined for the American Crystal Sugar plant. Beet deliveries are strategically timed during all hours of the day to reduce impacts to peak hour travel. The origin of these heaw commercial movements is estimated to be evenly split into thirds, with $1 / 3$ of the trucks coming east on US Highway 2, 1/3 from the north on US Highway 2 or the east on County Road 17, and the remaining third from the south via US Highway 2. Aside from the increase in harvest season heavy commercial traffic volumes, year-round heavy commercial traffic volumes for the corridor averages nearly 10 percent of the overall traffic.
Another key freight generator is LM Wind Power, a company that produces and ships fiberglass blades for large scale wind turbines. The size of the blades being produced have recently expanded up to 184 feet, 26 feet longer than previous versions. The length of these blades impacts the delivery and shipment of these products via trucks, requiring large turning movements along key freight corridors including I-29, DeMers Avenue, and 32nd Avenue South.

The North Dakota State Mill (NDSM) is a major generator truck and for train activity in the region. Grain trucks bring commodities to the Mill and after processing much of the outputs are shipped out via rail. While there are anticipated increases in grain received at the NDSM, the most significant increase in actinity is associated with a planned unit grain unloading facility with access to the Glasston Subdivision. Plans for improvements on the NDSM property are being pursued. With additional rail car storage at the North Dakota State Mill there will be the opportunity for an increase in grain received via the Mill Spur rail line. This is expected to have an impact on rail traffic to both the Mill Spur and Glasston Subdivision due to a potential rail connection, as well as the roadway network due to the increased truck traffic and additional activity at railroad crossings.

## Recent and Programmed Regionally Significant Improvements

The previous Street/Highway Plan along with state and local transportation improvement programs identify projects to be implemented and that are in the project development phase or are already prioritized for investment. These upcoming projects along with the existing conditions described in this chapter will influence future travel patterns in the region. The following includes a list of regionally significant improvements that were recently constructed or identified in the 2019-2022 Transportation Improvement Program, as further shown in Figure 3-43.

- Kennedy Bridge Rehabilitation (2017)
- South Columbia Road 2 to 5 Lane Expansion and New Signal (2017)
- South Columbia Road Turn Lanes at 17th Avenue South (2017)
- Central Avenue Multi-Use Trail (2018)
- Greenway Boulevard Reconstruction and Sidewalk (2018)
- 32nd Avenue Corridor Safety Improvements (2019)
- DeMers Avenue (Columbia Rd/30th St.) Traffic Signal/Turn Lanes (2019)
- DeMers Avenue Reconstruction/Expansion (2019)
- Gateway Drive/55th Street Traffic Signal/Turn Lanes (2020)
- US 2 Resurfacing in Grand Forks (2021)
- North Columbia Road Reconstruction (2021)
- I-29 Bridge Maintenance north of US 2 Interchange (2021)
- US 2 Resurfacing in East Grand Forks (2021)
- North Washington Street Railroad Underpass Reconstruction (2022)
- Bygland Road and Rhinehart Drive Intersection Reconstruction (2022)

Figure 3-43: Recent and Programmed Regionally Significant Projects by Year

## Recent Studies

Since the 2040 Street/Highway Element was adopted, several corridor studies were completed providing new recommendations that, if implemented, would affect the functionality of the overall roadway network. The recent studies and key findings are summarized below:

## I-29 Traffic Operations Study (2017, Grand Forks)

The I-29 Traffic Operations Study examined the current and future needs and opportunities for this important regional corridor. The study provided several recommendations and implementation strategies as summarized below and in Figure 3-44.

The study found that without improvements, existing interchanges at Gateway Drive/US 2, DeMers Avenue, and $32^{\text {nd }}$ Avenue South will experience significant delays and backups onto l-29 based on 2040 forecasts. New Red River crossings at $32^{\text {nd }}$ Avenue South and Merrifield Road were found to provide great benefit to the region but did little to improve forecasted congestion on I-29. Grade separations (over/underpasses) were studied at $17^{\text {th }}$ Avenue South, $47^{\text {th }}$ Avenue South, and $62^{\text {nd }}$ Avenue South; however, the cost of these improvements outweighed the benefits in the near term and were not carried forward.

Other findings include:

- Based on 2040 forecasts, the $32^{\text {nd }}$ Avenue South interchange traffic operations cannot be satisfactorily improved without an interchange at $47^{\text {th }}$ Avenue South
- The Gateway Drive/US 2 interchange would benefit from the Northeast Loop Alternative, as recommended from the US 2 Study, and also grade separation of the Glasston Railroad east of $42^{\text {nd }}$ Street along Gateway Drive/US 2
- The DeMers Avenue interchange would benefit from traffic control and lane configuration improvements. Also, DeMers Avenue would benefit from the $42^{\text {nd }}$ Street railroad grade separation just north of DeMers Avenue. This railroad grade separation would also mitigate additional significant infrastructure improvements along I-29.
- New interchanges at 47th Avenue South and Merrifield Road/County Road 6 were found to provide significant improvement and value to the region
- A 47 ${ }^{\text {th }}$ Avenue South interchange with an additional travel lane on I-29 between $32^{\text {nd }}$ Avenue South and $47^{\text {th }}$ Avenue South was found to reduce congestion along $32^{\text {nd }}$ Avenue South to the point of mitigating $\$ 16$ million worth of improvements at the existing $32^{\text {nd }}$ Avenue South interchange
- A Merrifield Road interchange provided a major reduction to regional vehicle miles of traveled. This interchange could be implemented with only adding ramps to the existing bridge.
- No significant problems were identified along I-29 after bottlenecks at the key interchanges of Gateway Drive, DeMers Avenue and $32^{\text {nd }}$ Avenue South were relieved

I-29 Interchange Implementation Plan and Project Costs:

- I-29/North Washington Street Interchange improvements estimated at $\$ 5.98$ million, no immediate need, improvements could be incorporated into 2030 NDDOT I-29 concrete pavement repair project
- I-29/Gateway Drive (US 2) Interchange improvements estimated at $\$ 6.62$ million (northeast loop 20312040+) and US 2 railroad grade separation estimated at $\$ 28.3$ million (planning evaluation 2026-2030)
- I-29/DeMers Avenue (ND 297) Interchange improvements estimated at $\$ 7.4$ million (planning evaluation before 2025) and $42^{\text {nd }}$ Street railroad grade separation estimated at $\$ 40$ million (planning evaluation before 2025)
- $1-29 / 32^{\text {nd }}$ Avenue South Interchange improvements estimated at $\$ 915,000$ (2017-2030) and $47^{\text {th }}$ Avenue South Interchange estimated at $\$ 28.5$ million (mid-term planning horizon, 2026-2030)
- I-29/Merrifield Road Interchange Ramps and traffic control at South Columbia Road (\$16.8 to \$18.1 million)

Figure 3-44: I-29 Study - Prioritized Improvements

Source: Grand Forks-East Grand Forks MPO I-29 Traffic OperationsStudy, 2017

## US 2 and US 2 Business Study (2017, East Grand Forks)

The primary goal of this study was to evaluate alternatives for improvements to the US Highway 2 and US Business 2 intersection to ensure safe and efficient operation for all modes of transportation. There is a long history of discussed improvements to the US Highway 2 and US Business 2 intersection based on historic crashes, heavy commercial truck movements, truck storage, and roadway grades, among others. MnDOT has scheduled a resurfacing project for the westbound lanes of US Highway 2 in 2021 and has allotted safety funding that may be utilized for improvements to this intersection. As a result of this potential funding, the intersection, along with five others in the area, were reviewed to quantify issues and identify potential opportunities.

Several intersection alternatives were evaluated based on 31 criteria. Three alternatives (Alternatives 2A turn lane improvements, 3A modified R-Cut and acceleration lane, and 3B modified R-Cut) received the highest cumulative score, and are all recommended solutions for improvements for the US Highway 2 and US Business 2 intersection. This recommendation is a result of the alternative evaluation and input received from the public and corridor stakeholders throughout the process. Further analysis during project development and NEPA evaluation should be used to determine a preferred solution for the intersection to be included in the 2021 resurfacing project.

## Bygland Road Study (2016, East Grand Forks)

This study evaluated the 2.5 -mile segment of Bygland Road from the Red Lake River to the southeastern East Grand Forks city limits. The goals of this study were to: evaluate feasibility, design options and desire to provide an on street bike facility along Bygland Road; examine traffic operations at key intersections, specifically $5^{\text {th }}$ Avenue, Rhinehart Drive, and $13^{\text {th }}$ Street and potential options to improve mobility, access, and safety; improve pedestrian crossing opportunities and safety at key locations along the corridor; and examine Cities Area Transit (CAT) and school bus stops and routes within the study area and potential to improve the modal connections.

The outcomes of the study included a recommended transportation plan showing future infrastructure improvements, capital improvement programming costs and an implementation plan. Recommendations included:

- Pedestrian and bicycle improvements from $1^{\text {st }}$ Street Southeast to $13^{\text {th }}$ Street Southeast (south East Grand Forks City limits), estimated costs of \$215,000-\$543,000 (2016-2020)
- Reroute "Route 11" to Bygland Road and Rhinehart Drive concurrent with roundabout construction currently programmed for 2022
- Pedestrian school crossing improvements programmed for 2018
- Roundabout construction at Bygland Road and $13^{\text {th }}$ Street, estimated costs of $\$ 3.5$ million (long-term improvements 2026-2040)
- Roundabout construction at Bygland Road and $5^{\text {th }}$ Avenue, estimated costs of $\$ 1.875$ million (long-term improvements 2026-2040)

## Glasston Railroad Crossing Study (2016, Grand Forks)

The purpose of the study was to develop strategies to minimize at-grade conflicts of train traffic in northern Grand Forks. The north-south BNSF Railway Glasston Subdivision currently has six trains per day at a maximum speed of 25 MPH and is forecasted to increase to twelve trains per day by 2040. Gateway Drive/US 2 is an NHS/Super Haul/Expanded Envelop Corridor ${ }^{4}$ serving international trade from Canada. Gateway Drive/US 2 is currently congested and expected to become increasingly congested in the future. Operations along the Glasston Subdivision can result in trains currently blocking traffic on Gateway Drive/US 2 for 5 minutes at a time.

[^6]The Mill Spur Rail Line is east of the Glasston Subdivision, just west of the Red River and the Grand Forks Downtown, currently has a total of thirteen at-grade crossings, including University Avenue, $8^{\text {th }}$ Avenue, and Gateway Drive/US 2. The Mill Spur does not currently connect to the Glasston Subdivision.
The study recommends rerouting the Mill Spur north of Grand Forks near $27^{\text {th }}$ Avenue and continuing west to the Glasston Subdivision to remove thirteen existing at-grade railroad crossings just west of the downtown area. The study also recommends grade separation of Glasston Subdivision at Gateway Drive/US 2.
In June 2017, it was announced that ND State Mill is seeking City approval to receive unit trains using the Mill Spur Line.

## North $42^{\text {nd }}$ Street Traffic Operations Study (2016, Grand Forks)

The existing three-lane corridor has adequate capacity for existing and forecasted traffic. An upgraded signal, driveway consolidation, right and left-turn lane improvements, and bicycle facility improvements are recommended in the study. The reconstruction of North $42^{\text {nd }}$ Street from University Avenue to Gateway Drive is programmed for 2018 at an estimated cost of $\$ 6.9$ million. The proposed project will include reconstructing the roadway into a four-lane urban roadway south of $6^{\text {th }}$ Avenue and a three-lane urban roadway north of $6^{\text {th }}$ Avenue. In addition this project would also include a 10 -foot wide shared use path connecting with the existing path along Gateway Drive and the path along University Avenue.

## 32nd Avenue Safety Audit Review / 32nd Avenue Signal Coordination Plan Update (2016, Grand Forks)

This study was prepared by NDDOT. The study recommends a variety of turn lane, signal, and pedestrian related improvements along $32^{\text {nd }}$ Avenue from the Interstate 29 interchange to Washington Street. Turn lane, signal, and pedestrian related improvements are also recommended along Columbia Road, $20^{\text {th }}$ Street, and Washington Street, near $32^{\text {nd }}$ Avenue. Also, signal timing and operational improvements along $32^{\text {nd }}$ Avenue from $\mathrm{I}-29$ to Washington Street and along Columbia Road from $6^{\text {th }}$ Avenue North to $40^{\text {th }}$ Avenue South were recommended. Improvements are currently programmed for 2019.

## US 2 Access Study (2015, Grand Forks)

US 2 is a designated truck route and carries over half of North Dakota's 85 million tons of freight. The study highlighted improvements to six major focus areas: Airport Drive intersection, I-29 interchange area, traffic control, access management, the proposed Northern Plains Nitrogen (NPN) Plant site, turn lanes, and bicyclist/pedestrian facilities. Recommended improvements included:

- A staggered T-Intersection configuration and ITS improvements at Airport Drive
- A new northeast quadrant loop ramp along with turn lane improvements and new access restrictions at the l-29 interchange
- New signals at $55^{\text {th }}$ Street and $69^{\text {th }}$ Street
- NDDOT prefers 1 mile spacing of signals in rural areas and $1 / 2$ mile spacing is acceptable in urban areas
- Future turn lanes at $51^{\text {st }}$ Street, $55^{\text {th }}$ Street, $58^{\text {th }}$ Street and $69^{\text {th }}$ Street
- The corridor was divided into built-out urban, urbanizing, and rural areas for access management purposes
- No access management improvements were recommended for the build-out urban area
- A frontage and backage road system was developed for the urbanizing area. The urbanizing area also includes design plans for future $1 / 2$ mile full access signalized intersections with intervening $3 / 4$ access intersections.
- The rural area did not include specific plans for a frontage/backage road system, but is envisioned to accommodate a similar access spacing plan to the urbanizing area once developed

## South Columbia Road Traffic Operations Study (2015, Grand Forks)

A traffic study was completed for the proposed South Columbia Road expansion project programmed for 2017. The traffic study project limits were between $36^{\text {th }}$ Avenue South and $47^{\text {th }}$ Avenue South. The analysis provided the following conclusions:

- The intersections along South Columbia Road at $36^{\text {th }}$ Avenue South, $40^{\text {th }}$ Avenue South, and $47^{\text {th }}$ Avenue South and the segment from $36^{\text {th }}$ Avenue South to $40^{\text {th }}$ Avenue South have a crash rate higher than typical for intersections or segments with similar characteristics. $36^{\text {th }}$ Avenue South and $40^{\text {th }}$ Avenue South intersections have a crash rate above the critical crash rates, indicating a crash issue.
- Traffic forecasts were developed for future year 2040 conditions for two scenarios based on the ATAC travel demand model:
- Year 2040 with an interchange at $1-29 / 47^{\text {th }}$ Avenue South
- Year 2040 no interchange at $1-29 / 47^{\text {th }}$ Avenue South
- With the at I-29/47 ${ }^{\text {th }}$ Avenue South interchange, traffic volumes along South Columbia Road north of $47^{\text {th }}$ Avenue South decrease approximately 6,000 to 7,000 vehicles per day and traffic volumes along $47^{\text {th }}$ Avenue increase approximately 9,000 vehicles per day west of South Columbia Road
- Year 2040 traffic forecasts indicate that South Columbia Road will be significantly over capacity for a two-lane rural section for conditions with and without the I-29/47 ${ }^{\text {th }}$ Avenue South interchange. Planning level roadway capacities suggest that a five-lane (four-lane divided with turn lanes) will be needed along South Columbia Road to meet the traffic demand.
- It was recommended that South Columbia Road be expanded to a four-lane facility south of $36^{\text {th }}$ Avenue South to $47^{\text {th }}$ Avenue South.
- Construction will be complete in Fall 2017.

## 42nd Street Railroad Grade Separation Study (2014, Grand Forks)

$42^{\text {nd }}$ Street is a primary access north-south corridor to North Dakota State University and Alerus Center, and carries 15,000 vehicles per day. An at-grade railroad crossing currently exists on $42^{\text {nd }}$ Street just north of DeMers Avenue. Train volumes are expected to increase 70 percent by 2040 and vehicle volumes expected to increase to 90 percent by 2040. It is estimated that by 2040, 41 percent of traffic would be diverted to I -29 and the railroad crossing would be blocked for ten percent of the day.

To address traffic issues, the City of Grand Forks is recommending grade separation of the railroad at this location with an estimated cost of $\$ 24$ to $\$ 30$ million. The project would have a benefit-cost of 1.5 and would save 500,000 hours of train delay through 2040. This project is beyond funding available over the long-term planning horizon. Additional funding opportunities including federal grants are being pursued. The recent announcement of golf course closure in southeast quadrant of DeMers Avenue/42 ${ }^{\text {nd }}$ Street intersection may open up discussion of alternatives previously eliminated that utilize the golf course property

## Grand Forks-East Grand Forks Freight Rail Access Study (2014, Grand Forks)

This study undertook a broad stakeholder outreach effort and site viability analysis to identify properties in the GF/EGF area that are available and best suited for providing industrial/commercial access to rail services on the BNSF Railway. The study also analyzed the local street network and developed conceptual designs for rail access for a several sizes of property developments. This is the first step toward the greater inclusion of freight in the MPO planning process as well as the deliberate inclusion of freight in the broadly defining the future vision of the region. The study provided a list of recommendations for next steps in increasing rail freight access to the region.

## Grand Sky Traffic Study (2013, Grand Forks)

Grand Sky is a proposal for private use of the Grand Forks Air Force Base runway for drone use/development. The development was proposed in the southwest portion of the existing Grand Forks Air Force Base along the
north side of US 2, near 27 ${ }^{\text {th }}$ Street, is expected to employ 3,000 people when fully developed with 70 percent of travel to and from Grand Forks/East Grand Forks. Recommended improvements to accommodate this development include:

- Construct four lane expansion of $27^{\text {th }}$ Street
- Construct turn lanes and install a traffic signal at US 2 and $27^{\text {th }}$ Street

The recommendations from this study have since been completed. This location is not within the MPO planning area.

## Chapter 4. Identification of Issues

This chapter is intended to provide a summary of key issues and themes for the 2045 Street/Highway Plan Update identified as part of public engagement activities, stakeholder input, and in the Existing Conditions Chapter. The findings of this chapter served as the basis for developing Chapter 5. Range of Alternatives by considering both the technical analysis of the current street and highway network with the input received from Technical Advisory Committee (TAC) stakeholder meetings, public meetings, and on-line surveys and engagement.

## Existing Conditions Summary

The Existing Conditions Chapter provides a summary of the Grand Forks-East Grand Forks Metropolitan Planning Organization (MPO) area street and highway system. Several topics were discussed including roadway functional classification and jurisdiction, pavement and bridge condition, traffic and safety patterns, and summaries of recent study recommendations. The following is a summary of key issues and themes identified in the chapter.

- Balancing the need to maintain existing pavement conditions with the need to expand roadways to support additional traffic continues to be an issue given current funding levels.
- Three east-west corridors (US 2/Gateway Drive, DeMers Avenue, and 32nd Avenue South) and two north-south corridors (Columbia Road and Washington Street) continue to experience the highest daily traffic volumes.
- Overall, the system's intersections generally operate within acceptable traffic Level of Service (LOS) AC conditions. There are four intersections where a LOS D was recorded (South Columbia Road \& 17th Avenue South, South Columbia Road \& 32nd Avenue South, South Washington Street \& DeMers Avenue, and North 42nd Street \& University Avenue when trains are present). No intersections were recorded with a LOS E or F.
- The roadway segment traffic analysis identified three road segments experiencing LOS of D (South Columbia Road between 11th Avenue South and DeMers Avenue, South Columbia Road between 17th Avenue South and Knight Drive, and South Washington Street between 8th Avenue South and DeMers Avenue). There were no segments that were identified as a LOS E or F as part of this analysis.
- A total of 26 intersections were found to have crash rates above the expected crash rates. Three intersections experienced over 50 crashes during this timeframe. They were: S. 34th Street \& 32nd Avenue S. (64), N. 42nd Street North \& DeMers Avenue (60), and S. 31st Street \& 32nd Avenue S (52).
- There were no fatal incidents reported in any of the high crash rate intersections from 2012-2015. 31 percent of the total crashes that occurred at the high crash rate intersections involved injury related crashes.
- Minimizing traffic delays at rail crossings is important, especially for truck freight movement. Two problematic at-grade rail crossings for truck traffic delays associated with unit train traffic and train blockages are the Glasston Subdivision crossing at US Highway 2 and the Grand Forks Subdivision crossing near the intersection of DeMers Avenue and North 42nd Street.
- The I-29 Traffic Operations Study (2017) found that without improvements, existing interchanges at Gateway Drive/US 2, DeMers Avenue, and 32nd Avenue South will experience significant delays and backups onto l-29 based on 2040 forecasts. New Red River crossings at 32nd Avenue South and Merrifield Road were found to provide great benefit to the region but did little to improve forecasted congestion on I-29. Grade separations (over/underpasses) were studied at 17th Avenue South, 47th Avenue South, and 62nd Avenue South; however, the cost of these improvements outweighed the benefits in the near term and were not carried forward.
- The Bygland Road Study (2016) includes a recommended transportation plan with near term improvements including: pedestrian, bicycle and school crossing improvements; reroute of "Route 11" to Bygland Road and Rhinehart Drive; roundabout construction at Bygland Road and 13th Street; and roundabout construction at Bygland Road and 5th Avenue.
- The Glasston Railroad Crossing Study (2016) recommends rerouting the Mill Spur north of Grand Forks near 27th Avenue and continuing west to the Glasston Subdivision to remove thirteen existing at-grade railroad crossings just west of the downtown area. The study also recommends grade separation of Glasston Subdivision at Gateway Drive/US 2.
- NDDOT completed a safety audit review and signal coordination plan in 2016 for 32nd Avenue from I29 to Washington Street. The study recommends a variety of turn lane, signal, and pedestrian related
- Improvements and signal timing and operational improvements. Improvements are currently programmed for 2019.
- A grade separation of the railroad at 42nd Street is recommended by the City of Grand Forks to address traffic issues. However, this project is currently beyond funding available over the long-term planning horizon.
- The US 2 Access Study (2015) highlighted several improvements to six major focus areas: Airport Drive intersection, I-29 interchange area, traffic control, access management, the proposed Northern Plains Nitrogen (NPN) Plant site, turn lanes, and bicyclist/pedestrian facilities. The corridor was divided into built-out urban, urbanizing, and rural areas for access management purposes. No access management improvements were recommended for the build-out urban area. A frontage and backage road system was developed for the urbanizing area. The urbanizing area also includes design plans for future $1 / 2$ mile full access signalized intersections with intervening $3 / 4$ access intersections. The rural area did not include specific plans for a frontage/backage road system, but is envisioned to accommodate a similar access spacing plan to the urbanizing area once developed.

## Summary of Public and Stakeholder Engagement

As part of the 2045 Street/Highway Plan Update, several outreach and engagement opportunities have been utilized to help the public learn about the plan and provide input regarding the street and highway system in the MPO area. Both in person and web-based opportunities were used to ensure that people could participate in ways that work best for their schedule and preferred communication style. The following list describes the various public engagement opportunities used through the planning process.

- Public meetings and open houses
- Project website (www.theforksstreets2045.org) combined with interactive online mapping, surveys, and comment forms. The project website was used as the primary resource for posting information related to the planning process.
- MPO Facebook updates and postings
- MPO website updates
- Agency and stakeholder meetings
- Local media press releases and interviews with MPO staff

## Public Meetings

Four public meetings have been held to date. The materials presented at the meetings were also posted on the study website immediately following the meetings. More information is available in Appendix B.

## Public Meeting \#1

The first public meeting was held on August 30, 2017, at the Empire Arts Center in Grand Forks. A formal presentation was provided during a portion of the event, and the remainder of the event was set up in an open house format. The purpose of this public meeting was to introduce the Street and Highway Plan Update to the public, present the 2045 Long-Range Transportation Plan (LRTP) vision statement and draft goals, and provide information on existing conditions and planned land use in the MPO area. Attendees were also asked to provide feedback on the condition of streets and highways in the MPO area to help guide the process for prioritizing projects in the Street and Highway Plan Update. Display boards were available that provided an overview of the LRTP and Street and Highway Plan Update, the schedule, the 2045 LRTP vision statement and draft goals,
existing conditions, and planned land use. An interactive mapping activity was also available on a display board and as an interactive map on the project website.

Twenty-two attendees signed in at the open house. Two written comments were received. One was a safety concern at a specific location and the other comment noted a preference to keep performance measures to only those that are required. The project website was accessed by more than 130 users in the two weeks before and after the public meeting.

## Public Meeting \#2

The second public meeting was held on December 14, 2017, at the East Grand Forks City Hall. The meeting was set up in an open house format (no formal presentation provided). The purpose of the meeting was to discuss the existing plus future transportation network and the transportation issues that have been identified so far. Additionally, the meeting was meant to explore the concept of a financially constrained transportation plan; this discussion was aided by an interactive financial planning activity, which collected input on attendees' public investment preferences. Finally, more detailed information on goals, objectives, and performance measures for the Street and Highway Plan Update were presented.

Display boards were available that provided information on the LRTP and Street and Highway Plan Update, the draft universe of alternatives, existing traffic volumes, forecast traffic volumes, planned land use, issues identified through the last public meeting and interactive mapping activity, the 2045 LRTP vision statement and draft goals, performance-based planning, financial plans, and the project schedule.

For the financial planning activity, each attendee was given ten stickers and a worksheet. Participants were asked to place the stickers, representing public funds, on their worksheets to indicate their investment priorities. On online version of this activity was also available on the project website.

Some of the key issues that were presented at the public meeting included:

- Costs are rising faster than federal and state revenues
- Developing reasonably expected revenue estimates for new sources (ND HSIP, ND Main Street Program, Grand Forks sales tax)
- Identifying and positioning projects to successfully compete for grants
- Maintenance and operations costs are a significant part of overall costs
- Need for additional river crossing to improve local traffic and connectivity

Seven attendees signed in on the meeting sign-in sheets. Three written comments were received. One comment asked that all railroad tracks south of Gateway Drive, Grand Forks, be removed, and that new tracks be laid north of Grand Forks and East Grand Forks. Another comment expressed that a new bridge and street improvements should be a first priority for public funding. A third comment expressed the desire for more bicycle and pedestrian infrastructure. This comment explained that east and west flowing bike traffic is very difficult and dangerous, and asked that bike facilities on University Avenue be improved. The project website was accessed by more than 100 users in the two weeks before and after the public meeting.

## Public Meeting \#3

The third public meeting was held on April 18, 2018, at Choice Health \& Fitness in Grand Forks. The purpose of this meeting was to present the range of alternatives, discuss how the alternatives will be evaluated, and share the public input received on funding priorities. Display boards were available that provided information on the LRTP and Street and Highway Plan Update, the project schedule, forecast average daily traffic, forecast volume to capacity ratios, issues identified through the first public meeting and interactive mapping activity, the 2045 LRTP vision statement and draft goals, performance-based planning, the financial plan, input received from the second public meeting and an interactive activity on funding priorities, the range of alternatives, the alternatives evaluation framework, and the river crossing analysis. This information was also presented through a formal presentation during the public meeting.

Fourteen attendees signed in on the meeting sign-in sheets. No written comment forms were submitted at the public meeting. The project website was accessed by nearly 80 users in the two weeks before and after the public meeting.

## Public Meeting \#4

The fourth public meeting was held on September 12, 2018, at the Alerus Center in Grand Forks. The purpose of this meeting was to present information about available street/highway funding and share the street/highway projects that match the funding available. Results from the analysis of new river crossing options were also shared. Display boards were available that provided information on the LRTP and Street and Highway Plan Update; the project schedule; the 2045 LRTP vision statement, goals, and performance measures and targets; performance goals, measures, and targets for safety, system preservation, and accessibility and mobility; the financial plan; input issues areas and investment priorities; the alternatives evaluation framework; the proposed investment scenario; and potential discretionary projects. Display boards were also available on the river crossing analysis, including information on the scope of work, traffic analysis, and benefit-cost analysis. This information was also presented through a formal presentation during the public meeting.
Eighteen attendees signed in on the meeting sign-in sheets. One written comment was received. It noted the commenter's opposition to the $24^{\text {th }}$ Avenue S river crossing option due to the impact to the historical society's grounds and recommended pursuing a crossing further south. The project website was accessed by more than 250 users in the two weeks before and after the public meeting.

## Online Engagement

A key public outreach component was the use of on-line resources to engage residents in the Street and Highway Plan Update process. The project website (www.theforksstreets2045.org) was used as the primary resource for posting information related to the study, announcements, and providing opportunities for on-line engagement activities. Between July 2017 and December 2018, the project website was accessed more than 2,000 times by more than 1,500 users. In addition, the MPO posted announcements on its Facebook page.

In coordination with Public Meeting \#1, an on-line mapping activity was used to collect input on the existing street and highway network. Accessed through the project website, participants were able to post geographically specific comments related to access, congestion/driving conditions, pavement conditions, safety, signs/signals, and other. A total of 97 comments were posted. Figure 4-1 displays the related location for these comments and the general comment type.

Figure 4-1: On-Line Mapping Results

The second on-line engagement activity was coordinated with Public Meeting \#2 to help identify investment priorities to inform the financial plan analysis. Via the project website, participants were asked how they would allocate $\$ 100$ between the six investment categories listed below. The more money allocated to a category indicates a higher priority for the participant. A total of 69 interactions were posted. The results of the exercise are illustrated in Figure 4-2 and included the following:

- Maintain and rebuild existing infrastructure: 30\%
- Safety improvements (ex: lighting): 9\%
- Improve traffic signals and technology: 8\%
- New freeway interchanges: 16\%
- New river crossings: 29\%
- Add additional lanes or new roads: 8\%

Figure 4-2: December 2017 Open House Results - How Would You Invest \$100?

## Stakeholder Engagement

The following stakeholders have been identified in the Streets and Highway Plan Update planning process:

- North Dakota Department of Transportation
- Minnesota Department of Transportation
- City of Grand Forks
- City of East Grand Forks
- Grand Forks County
- Polk County
- Federal Highway Administration
- Federal Transit Administration
- Residents and other stakeholders

The Technical Advisory Committee (TAC) served as a primary group to collect input from the various partner agency stakeholders. The TAC is composed of various modal staff from the GF/EGF MPO's cities and counties, as well as technical staff from the North Dakota Department of Transportation (NDDOT), the Minnesota Department of Transportation (MnDOT), Federal Transit Administration (FTA) and the Federal Highway Administration (FHWA). Study meetings were held on approximately a monthly basis throughout the planning process.

One of the key issues discussed by the TAC included the need for an additional crossing over the Red River for the southern portion of the MPO area. TAC representatives noted that this issue has been discussed in previous Streets and Highway plans, and continues to be a need to address local traffic and connectivity for an expanding population.

## Summary of Issues, Needs and Opportunities

A summary of issues and opportunities collected from the public and stakeholder engagement activities is provided in Figure 4-3. Some of the key issues include:

- Additional southern Red River crossing
- $32^{\text {nd }}$ Avenue South
- Proposed interchange improvements along I-29
- Bygland Road
- Columbia Road
- Washington Avenue
- Belmont Road
- Proposed railroad grade separations at DeMers Avenue and US Highway 2
- US Highway 2
- Demers Avenue through the Grand Forks and East Grand Forks downtowns
- Minnesota TH 220

Figure 4-3: Issues Map

## Chapter 5. Range of Alternatives

This chapter provides a summary of the process used to develop various street and highway improvements needed to improve the overall street and highway transportation system and address identified existing, 2030, and 2045 street and highway goals, objectives, standards, performance measures and targets, and issues for the Grand Forks-East Grand Forks (GF/EGF) Metropolitan Planning Organization (MPO) area. The Range of Alternatives process is intended to develop a comprehensive list of potential projects for consideration in various financially constrained alternative scenarios. The process for developing the range of alternatives included reviewing existing transportation improvement programs and recent studies to document expected and anticipated improvements. Previously unidentified improvements were considered to address unmet needs based on the results of the technical analysis and traffic modeling from the overall Street/Highway Plan Update process. Public input and partner agency feedback also contributed to the development of the list of projects for evaluation.

## 2040 Street/Highway Plan Improvements

Projects identified by the previous 2040 Street/Highway Plan Update were compiled to summarize known and documented transportation improvement needs. Previously completed projects since adoption of the 2040 Street/Highway Plan Updated were removed from the inventory.

## Programmed Improvements

Programmed roadway improvements as identified by local, regional, and state agencies were inventoried for the GF/EGF MPO area. All roadway projects currently listed in the GF/EGF MPO's transportation improvement program (TIP) and the North Dakota and Minnesota statewide transportation improvement programs (STIP)s were compiled to the range of alternatives list. This information also provided valuable data on project scopes, cost, funding sources and program year.

The Grand Forks 6-year capital improvement program (CIP) and the East Grand Forks 5 -year CIP were also reviewed to add locally programmed roadway projects to the list. It was through this process that costs, scopes, funding sources and year of improvements for many local projects were identified and/or refined.

In addition, the recently adopted Grand Forks Infrastructure Sales Tax project list was reviewed. Any projects not previously identified were added to the list. The following list identifies the source of all programmed roadway improvements that were included in the Range of Alternatives:

- NDDOT Statewide Transportation Improvement Program 2018-2021 and 2019-2022
- MnDOT Statewide Transportation Improvement Program 2018-2021 and 2019-2022
- Grand Forks-East Grand Forks MPO Transportation Improvement Program 2018-2021 and 2019-2022
- Grand Forks Capital Improvement Program (2018-2023)
- East Grand Forks Capital Improvement Program (2018-2022)
- Grand Forks Infrastructure Sales Tax Project List

## Recently Completed Studies

Several recent studies that identified or recommended roadway improvements with the GF/EGF MPO planning area were compiled and reviewed. It was through this step that additional recommended roadway improvements were identified for inclusion on the expanded range of alternatives list. These studies also provided valuable technical analysis and costs estimates for such improvements.

## Safety Plans \& Operational Analysis

A list of safety issues and needs were identified as part of the Plan's detailed technical analysis. These issues and needs were evaluated during the development of the range of alternatives by the TAC and GF/EGF MPO staff to determine possible project improvements that will address safety needs. A detailed summary of the safety issues are identified in the Existing Conditions Chapter. A variety of safety related projects eligible for Highway Safety Improvement Program (HSIP) federal funding are also included.

- North Dakota Local Road Safety Plan
- Polk County Safety Plan
- MnDOT District 2 Safety Plan

As discussed in the Existing Conditions Chapter, existing intersection Level of Service (LOS) was also conducted at individual intersection locations within the GF/EGF MPO planning area in an effort to identify intersection operational deficiencies and possible project investments to improve these deficiencies. Additionally, as part of the Red River Crossing forecasted 2045 LOS analysis that was done in conjunction with this Street and Highway Plan at select intersections in the immediate vicinity of the crossings. This analysis, which can be found in Appendix C, was considered in the identification of future operational deficiencies and intersection operational improvement projects.

## 2030/2045 Capacity Analysis

Year 2030/2045 Average Daily Traffic (ADT) forecasts were prepared by the GF/EGF MPO regional travel demand forecast model. As a part of the Street and Highway Plan update, staff from the Advanced Traffic Analysis Center (ATAC) worked in coordination with GF/EGF MPO staff to update the travel demand model.
The travel demand model update included the most recent state-of-practice techniques to improve the model's ability to correctly replicate local travel patterns. Details about specific updates to the model can be found in Appendix D. Other updates included, but were not limited to, revised 2045 land use and transportation network assumptions to represent a 2015 base year 2030 and year 2045 conditions.
Average Daily Traffic (ADT) forecasts for year 2030 and 2045 were developed after the incorporation of the "Existing + Committed" transportation system which included the existing roadway network plus all roadway improvement projects that currently programmed in the GF/EGF MPO's 2018-2022 Transportation Improvement Program (TIP). After the model was calibrated and verified for an acceptable level of accuracy, 2030/2045 traffic forecasts were produced and mapped. Figure 5-1 and Figure 5-3 illustrate the resulting forecasted 2030 and 2045 ADTs respectively.
2030/2045 ADT forecasts developed through the travel demand modeling process provided the basis for the future Level of Service (LOS) deficiency analysis. This analysis was completed using volume to capacity (V/C) ratios to estimate future levels of congestion. Figure 5-1 illustrates the V/C thresholds used for the LOS deficiency analysis.
The purpose of the LOS analysis was to identify future 2030/2045 congestion for various roadway corridors throughout the GF/EGF MPO planning area, so that mobility improvement projects could be scoped and considered that could mitigate future operational issues. Locations anticipated to exhibit congestion issues (i.e., LOS D or worse) by year 2030 or 2045 were identified through this process and then discussed with the TAC to assess if existing programmed projects were already identified to address the deficiency or if a new Street and Highway Plan project should be proposed. Figure 5-1 and Figure 5-4 illustrate the resulting LOS for 2030 and 2045 respectively.
As part of the regional modeling task, an analysis of various Red River Crossings extending from $17^{\text {th }}$ Avenue South to Merrifield Road were also analyzed. Appendix C provides a detailed narrative and summary of this analysis and associated recommendations and conclusions.

Table 5-1: Volume to Capacity Ratio Thresholds

| Level of Service <br> (LOS) | Volume to Capacity (VIC) <br> Ratio |
| :---: | :---: |
| LOS A | $<0.6$ |
| LOS B | $0.6-0.7$ |
| LOS C | $0.7-0.8$ |
| LOS D | $0.8-0.85$ |
| LOS D- | $0.85-0.9$ |
| LOS E | $0.9-1.0$ |
| LOS F | $>1.0$ |

## North Dakota Mainstreet Projects

North Dakota Mainstreet projects were identified within the urban core of the City of Grand Forks. These projects are eligible for a special federal set-a-side established by NDDOT to revitalize existing urban core areas. Projects identified for this program included bicycle/pedestrian improvements, transit improvements, decorative streetlighting, benches, planters, street signs and other streetscape amenities.

## State of Good Repair Projects

State of Good Repair (SOGR) projects were identified by NDDOT, MnDOT, the City of Grand Forks, the City of East Grand Forks, Grand Forks County and Polk County based on these agencies assessment of current and anticipated future pavement and bridge conditions.

When considering State of Good Repair projects, efforts were made to group investments within the same roadway corridor that typically would occur in a sequence within the short-range, mid-range and long-range time periods of the transportation plan. These State of Good Repair investments, when done in the right sequence and the right time intervals, have been proven to maximize the useful life of pavements and bridges. These improvements generally include the following:

- Pavement Chip Seal/Bridge Painting
- Pavement Mill and Overlay/Resurfacing/Bridge Redecking
- Major Pavement/Bridge Rehabilitation
- Full Roadway/Bridge Reconstruction/Replacement

## Range of Alternatives Project List

The range of alternatives project list represents the entire "universe of projects" that have been evaluated and screened through the planning process. The range of alternatives was focused on addressing the GF/EGF MPO area's issues, needs and deficiencies. Appendix $F$ and Appendix $G$ provide a detailed summary of each project included in the entire range of alternatives projects list. This list divides projects into six categories, which include:

- MPO 2019-2022 TIP: Included in current regional TIP. Each of these projects is included as part of this metropolitan transportation plan.
- Existing + Committed (E + C) Network: Projects expected to be completed using Non-Federal/NonState funds.
- Safety/Operations - HSIP: Projects that will improve the safety and operation of the existing system.
- Multimodal, Streetscape, Studies: Projects emphasizing multimodal or streetscape improvements or studies.
- State of Good Repair: Projects related to maintenance and preservation of the existing system.
- Discretionary: All remaining projects not listed previously.

## Chapter 6. Financial Plan

## Introduction

This section examines the sources of funding that will be available for transportation investments within the region in the coming years and the general areas of expenditure for those revenues. This section presents the revenues that can reasonably be expected to be available and investment spending that will occur under what is known as the "Current Revenue Scenario".

As identified in past Street/Highway Plans, an inadequate level of transportation funding continues to be a major issue facing the region. Under the Current Revenue Scenario, expectations are that highway system pavement and bridge conditions will continue to decline, and that highway congestion will continue to grow.

This chapter summarizes the revenue forecasting methodology and results, and demonstrates how available revenues align with the investments identified in this plan.
It should be noted that funds were identified for 2023 to 2045 only. Projects identified as existing and committed are constrained based on funds identified for those projects in the 2019-2022 Transportation Improvement Program (TIP).

## Fiscal Constraint \& Revenue Forecasting Requirements

Since the passage of the Intermodal Surface Transportation Efficiency Act (ISTEA) in 1991, the long-range transportation planning process in metropolitan areas was transformed away from "needs" based analyses, with little-to-no consideration given to the transportation funding amounts, to a financially-constrained project / program planning approach. Fiscally-constrained means that anticipated investments are equal to or less than forecast revenues.

The fiscal evaluation element of the MPO planning process has continued to evolve. Subsequent congressional re-authorizations of TEA-21 in 1998, SAFETEA-LU in 2005, and MAP-21 in 2012 have required an increased level of financial analysis, so that MPOs clearly demonstrate that projects and program activities included in their transportation plan were reasonably fundable for both the near- and long-term.
This remains even truer today. The Fixing America's Surface Transportation Act (FAST Act) passed in 2015 places an even stronger emphasis on-performance-based planning, preserving the National Highway System (NHS), and documenting that sufficient funding is available to address "state of good repair" (preservation projects) before expansion or discretionary projects are programmed. State and local policy also emphasize that street and highway preservation needs are critical and should be considered a primary investment.

## Revenue Forecast Methodology

The methodology for developing future funding estimates was developed by the Grand Forks-East Grand Forks MPO in cooperation with state DOTs and local counties and cities. Federal and state policy allow for development of region-specific methodology, which is summarized below. All state and local partners accepted the resulting revenue forecasts.

## Step 1: Establish Historical Transportation Improvement Funding Programs and Amounts

The GF/EGF MPO worked with the state DOTs and local agencies to review past Transportation Improvement Program (TIP) funding and future revenue forecasts, when available, to establish a "reasonable" baseline for forecasting future revenue streams. The TIP assessment considered past obligated dollars for expansion and preservation projects that occurred on the federal aid system (e.g., functionally classified roadways) dating back to 2013. The assessment also considered projects programmed in the 2019-2022 Transportation Improvement

Program (TIP) for the Minnesota and North Dakota sides of the GF/EGF MPO, and projects planned in the MnDOT 10-Year Capital Highway Investment Plan 2019-2028.

The revenue data was further screened to evaluate if past funding sources could reasonably be expected to continue into this Plan's time horizon. Many sources are expected to continue including:

- Federal assistance to each State DOT
- Various federal funding pass through programs to local governments, e.g., Urban Program (North Dakota), Highway Safety Improvement Program, and the Area Transportation Partnership programs (Minnesota)
- State funding sources, e.g., gas tax and license tab fees
- Local revenue streams, e.g., property tax and sales tax.

Special revenue streams were not included, such as bonds, special assessments, or grants (e.g., Safe Routes to School, Local Road Improvement Board Grant), because they are not considered reasonably consistent future revenue streams.

The baseline revenue for federal, state, and local programs is presented in Table 6-1 for North Dakota and Minnesota. This information supplements the revenue forecast in the 2019-2022 Transportation Improvement Program and establishes the base forecast.

Table 6-1: Annual Anticipated GF/EGF MPO Revenues from Historic Sources - Annual (2018 Dollars except where noted)

| Funding Program | North Dakota | Minne sota |
| :--- | :--- | :--- |
| Highway Safety Improvement <br> Program | $\$ 530,500$ | $\$ 25,500$ |
| Interstate Program | $\$ 320,000$ | None |
| Urban Regional Program | $\$ 2,800,000$ | Not applicable |
| Urban Roads Program | $\$ 2,458,000$ | Not applicable |
| Statewide Performance Program <br> (SPP) | Not applicable | Varies by project <br> $\$ 3.2$ million to $\$ 13.6$ million <br> (year of expenditure dollars) |
| MN District Risk Management <br> Program | Not applicable | Varies by project <br> $\$ 720,000$ to $\$ 3.2$ million (year <br> of expenditure dollars) |
| East Grand Forks City Sub-Target <br> of Federal Funding | Not applicable | $\$ 860,000$ every fourth year <br> starting in 2018 |
| State Match | $\$ 390,000$ | Varies by project <br> $\$ 180,000$ to $\$ 3$ million (year of <br> expenditure dollars) |
| Federal Allocation to Grand Forks | $\$ 80,000$ | Not applicable |
| County |  |  |

## Step 2: Establish New Transportation Improvement Funding Programs and Amounts

The 2045 Street/Highway plan includes two new revenue sources identified by MPO partners, the federallyfunded Urban Grant (Main Street) program and a new City of Grand Forks sales tax. These sources are summarized in Table 6-2.

The Main Street program is a new competitive grant program administered by the North Dakota DOT and funded by Federal Highway Administration, with the intent of spurring investment in already developed areas. In coordination with NDDOT, the GF/EGF MPO estimated the MPO area will receive a portion of the annual program funding available in North Dakota, equal to its share of the North Dakota urban population. For the purposes of this plan, NDDOT directed the GF/EGF MPO to include Watford in the state's total urban population. Grand Forks made up 13 percent of the 2016 American Community Survey 5-year Estimated North Dakota urban population, and the GF/EGF MPO estimated it will receive the equivalent of $\$ 600,000$ annually, which is 13 percent of the annual $\$ 4,600,000$ program funding.
The City of Grand Forks also passed a new sales tax in November 2017 to fund public works projects, including Streets and Highways. The new sales tax supplements the existing City of Grand Forks streets/highway revenues and is set to sunset in the year 2037. For the purposes of this plan, the GF/EGF assumed the equivalent of $\$ 2,350,000$ annually (2018 dollars).

Table 6-2: Annual Anticipated GF/EGF MPO Revenues from New Sources - Annual (2018 Dollars)

| Funding Program | North Dakota | Minnesota |
| :--- | :--- | :--- |
| Main Street Program | $\$ 600,000$ | Not applicable |
| City of Grand Forks Sales Tax | $\$ 2,350,000$ | Not applicable |

## Step 3: Establish Revenue Growth Rates

The GF/EGF MPO worked with the state DOTs and the local agencies to establish inflation rates for each revenue source. These are summarized in Table 6-3.

Table 6-3: GF/EGF MPO Revenue Inflation Assumptions - Annual

| Inflation Rate by Funding Program | North Dakota | Minnesota |
| :--- | :--- | :--- |
| Federal Funding (includes State <br> Match) | $2.0 \%$ | $2.2 \%$ |
| State Funding (non-federal match) | $2.0 \%$ | $1.9 \%$ |
| Local Funding | $2.0 \%$ | $1.9 \%$ |

## Step 4: Identify Future Available Revenues

The GF/EGF MPO inflated each revenue stream annually through the program sunset year or 2045-planning horizon, whichever year came first. This information provided year-by-year revenue forecasts for 2023-2045 for each side of the GF/EGF MPO that are presented in Appendix E. Funds forecast at the federal, state, and local levels assume reauthorization or otherwise continued collection and disbursement of the source revenue (gas tax, property tax, sales tax, etc.).
The Street and Highway Plan incorporates the following revenue assumptions and State policies:

- The 2019-2022 Transportation Improvement Program for the Grand Forks-East Grand Forks metropolitan area
- The Minnesota Department of Transportation prepares their own revenue forecasts and disbursements by MPO area
- Area Transportation Partnership (Minnesota) generally provides funds to East Grand Forks project every four years. The Minnesota revenue forecasts account for this allocation starting in 2018, and includes a state match corresponding to 20 percent.

## Revenue Estimates

Based on these revenue assumptions, the GF/EGF MPO can reasonably anticipate approximately $\$ 425$ million dollars of revenue over the 23 -year planning horizon. Table 6-4 shows the forecast funds by timeband--shortrange (2023 - 2027), mid-range (2028-2037), and long-range (2038-2045)—which form the base for the fiscal constraint analysis in Chapter 7.These revenues are in addition to those forecast in the Grand Forks-East Grand Forks 2019-2022 Transportation Improvement Program.

Table 6-4: Funding Estimates by Timeband in Year of Expenditure Dollars

| Timeband | North Dakota | Minnesota | TOTAL |
| :--- | :--- | :--- | :--- |
| 2019-2022 <br> Transportation <br> Improvement Program | $\$ 62,640,000^{*}$ | $\$ 12,308,000$ | $\$ 74,948,000$ |
| Short-Range (2023-2027) | $\$ 69,969,000$ | $\$ 15,805,000$ | $\$ 85,774,000$ |
| Mid-Range (2028-2037) | $\$ 162,543,000$ | $\$ 18,910,000$ | $\$ 181,452,000$ |
| Long-Range (2038-2045) | $\$ 125,340,000$ | $\$ 32,857,000$ | $\$ 158,197,000$ |
| TOTAL (2023-2045) | $\$ 357,851,000$ | $\$ 67,572,000$ | $\$ 425,423,000$ |

*Includes $\$ 1.3$ million in federal funding available through the NDDOT Urban Main Street program in years 20212022

## Chapter 7. Future Network and Implementation

## Background and Overall Approach

The previous Range of Alternatives Chapter provides a summary of how the "Universe of Projects" list was developed, which encompasses all projects that could potentially be included in the Current Revenue Scenario of the financially constrained 2045 Street and Highway Plan. This Future Network and Implementation Chapter provides an outline of the methodology, assumptions and underlying approach used to narrow down the "Universe of Projects" list to a smaller subset of street and highway projects that have been identified as the financially constrained 2045 Street and Highway Plan (i.e. Current Revenue Scenario). Projects identified in the Current Revenue Scenario are eligible to compete for federal transportation funding through the GF/EGF MPO's Transportation Improvement Program (TIP) process. The following pages provide further background of how these Current Revenue Scenario projects were selected.

Projects identified in this section supplement those identified in the 2019-2022 Transportation Improvement Program (TIP).

## Goals, Objectives, Performance Measures

The fundamental starting point for reviewing the "Universe of Projects" list and considering projects for inclusion in the Current Revenue Scenario was to consider the overall vision, goals, objectives, standards, performance measures and targets established for the 2045 Street and Highway Plan. The policy framework outlined in the 2045 Plan includes specific federal performance target requirements from the FAST Act combined with State and local standards established by NDDOT, MnDOT and the MPO regarding how the overall transportation system should perform today and through the year 2045.
The Grand Forks-East Grand Forks MPO has established ten overarching goal areas in this Plan related to the regional transportation system. Federal performance measures through the FAST Act have also been established for safety, state of good repair, mobility and environment. Safety and state of good repair are identified as the top federal investment priority in the FAST Act. These federal investment priorities have been carried out by NDDOT and MNDOT and are also the primary investment focus of this Grand Forks-East Grand Forks MPO 2045 Street and Highway Plan.

Specific targets have been established by NDDOT and MnDOT to carry out State of Good Repair requirements for the National Highway System (NHS). Maintaining roadway pavements and bridges in a State of Good Repair consistent with these targets for NHS Interstate Principal Arterials and Non-NHS Minor Arterials was the number one priority of the MPO and its planning partners when identifying fiscally constrained projects in the Current Revenue Scenario. Table 2-15 of the Vision, Goals, Objectives, Standards, Performance Measures and Targets Chapter outlines the specific State of Good Repair performance targets established by NDDOT and MnDOT to satisfy this FAST Act State of Good Repair mandate. The Grand Forks East Grand Forks MPO has adopted these same NDDOT and MnDOT standards for pavement quality and bridge condition. Figure 7-1 provides an illustration of how the overall 2045 Street and Highway Plan vision, goals, objectives, standards, performance measures and targets relate to each other as part of the overall planning process.

## Financial Forecast

As discussed in the Financial Forecast Chapter, Federal law requires that Current Revenue Scenario projects be financially constrained to only include projects that can reasonably be expected to be funded within the 2045 planning horizon. For the 2045 Street and Highway Plan Current Revenue Scenario, separate financially constrained project lists were prepared based on the following 2045 forecasted highway revenue sources outlined in Table 7-1.

Table 7-1: 2045 Highway Revenue Forecast (2023-2045)

| Funding Source | Total <br> Forecasted <br> Revenue (2023- <br> $2045)^{*}$ |
| :---: | :---: |
| Safety | $\$ 17.7$ |
| North Dakota Main Street | $\$ 19.1^{* *}$ |
| Interstate | $\$ 10.2$ |
| State | $\$ 20.3$ |
| Other Federal | $\$ 218$ |
| Local | $\$ 139.9$ |
| Total | $\$ 425$ Million |

**An additional $\$ 75$ million is forecast to be available in the 2019-2022 Transportation Improvement Program *An additional $\$ 1.3$ million in federal funding is available through the NDDOT Main Street program in years 2021-2022

Using the above referenced revenue forecasts, revenues for each funding source were then broken up further into the following time periods so projects could be grouped and financially constrained intological implementation periods.

Table 7-2: 2045 Street/Highway Plan Time Periods

| Transportation Improvement <br> Program | $2019-2022$ | Adopted MPO Transportation <br> Improvement Program |
| :--- | :--- | :--- |
| Short-Range | 2023 to 2027 | Starts at end of adopted <br> $2019-2022$ MPO <br> Transportation Improvement <br> Program |
| Mid-Range | 2028 to 2037 | End coincides with expiration <br> of City of Grand Forks <br> $2018-2037$ sales tax |
| Long-Range | 2038 to 2045 | Remaining years in planning <br> horizon |

Projects that could not be financially constrained within these time periods and the overall 2045 planning horizon were identified as "Illustrative." Illustrative projects are projects that have a regional transportation purpose and need, however, based on the financial forecast and established project priorities, it is not reasonable to assume that the project can be funded within the 2045 planning horizon.

## Public Input

Another important consideration in selecting projects from the Universe of Projects list for inclusion in the Current Revenue Scenario was collecting public input. Early in the study process, during the summer of 2017, citizens had an opportunity to provide input about general transportation issues they experience in the Grand Forks-East Grand Forks Metro Area via an interactive on-line "Wiki Maps" tool. General transportation issue areas identified through the "Wiki Maps" exercise are summarized in Figure 7-2.

Figure 7-2: 2017 On-line Wiki Map Survey: What are your transportation issues?

In late 2017, residents had an opportunity to provide input about investment priorities for the area's street and highway system. Residents could provide input at the December 2017 Open House and online through the plan
website. Figure 7-3 summarizes investment preference responses. As shown in Figure 7-2 and Figure 7-3, existing transportation system preservation and safety are high priorities for Grand Forks-East Grand Forks residents, along with a new river crossing.

Figure 7-3: January 2018 Open House: How would you invest between the above referenced choices?

## Prioritization Tool

In addition to overall transportation plan goals and objectives, the 2045 revenue forecast, and public input, another important resource used to identify Current Revenue Scenario projects from the Universe of Projects list was a Prioritization Tool that helped score and rank projects based on how well they addressed each of the following ten goal areas:

1. Economic Vitality
2. Security
3. Accessibility and Mobility
4. Environmental/Energy/Quality of Life
5. Integration and Connectivity
6. Efficient System Management
7. System Preservation
8. Safety
9. Resiliency
10. Tourism

Using the above referenced general goal areas and more detailed objectives associated with each goal as a reference, staff then used the prioritization tool to assign points to each project on the Universe of Projects list as one consideration in the project screening process. Projects that did not clearly improve a given goal area and its associated objectives received 0 points for that goal. Projects that clearly improved a given goal area and its associated objectives receive 1 point for that goal.
Projects were prioritized into the following federal project categories:

- State of Good Repair
- Safety
- North Dakota Urban Grant (Main Street) Program
- Illustrative

## Other Considerations

In addition to the considerations outlined above, a variety of other factors also contributed to the overall conversation and ultimate decision of what projects to include in the Current Revenue Scenario. The following provides an overview of these considerations.

## NHS and Functional Classification

State of Good Repair pavement and bridge projects on the federally designated National Highway System (NHS)/Principal Arterial system, including Interstate 29, US Highway 2, DeMers Avenue, Columbia Road, Washington Street and 32nd Avenue South were given the priority for inclusion in the Current Revenue Scenario. Secondarily, Non-NHS Minor Arterial State of Good Repair pavement and bridge projects were also funded to the extent possible.

## Pavement and Bridge Life Cycle

When considering State of Good Repair projects, efforts were made to group investments within the same roadway corridor that typically would occur in a sequence within the short-range, mid-range and long-range time periods of the transportation plan. These State of Good Repair investments, when done in the right sequence and the right time intervals, have been proven to maximize the useful life of pavements and bridges. These improvements generally include the following:

- Pavement
- Reconstruction by rebuilding the roadway, including soil and infrastructure beneath the pavement
- Rehabilitation by performing mill and overlay
- Preservation by applying chip seal
- Bridge
- Reconstruction by rebuilding the bridge, including approach roadways
- Rehabilitation by replacing the bridge deck
- Preservation by repainting the surface of the bridge

## Existing Investment Programs

Existing short-, mid-, and long-range investment programs developed by MnDOT, NDDOT, the City of Grand Forks, the City of East Grand Forks, Grand Forks County and Polk County tied to known revenue sources were used as a starting point to identify individual agency investment priorities. These individual agency investment programs were integrated into the overall Current Revenue Scenario to the maximum extent possible within the framework of other factors outlined in this chapter.

The North Dakota Urban Grant (Main Street) Program was introduced in 2017. The program funds transportation improvements that directly support a community's urban core and central business district. It is also intended to leverage funding administered by other state agencies. Urban Grant Program objectives include: preserving existing assets; ensuring safety of all users of the transportation system; improvement of multi-modal transportation options such as walking, bicycling and public transit; supporting economically sustainable growth; lessening the need for outward expansion of community transportation infrastructure; and enhancing the economic vitality of the area by providing transportation assets.

## Project Cost Estimates and Inflation

Current project cost estimates were provided by NDDOT, MnDOT, City of Grand Forks, City of East Grand Forks, Polk County and Grand Forks County or were taken from recent corridor studies. In limited cases, current cost
estimates were made based on similar projects in the Grand Forks/East-Grand Forks area. Each project was assigned to a time period in the plan, and its cost was inflated to the mid-year of the time period. The assumed annual inflation rates were 4 percent per year in North Dakota, and 4.4 percent per year in Minnesota. The inflation factors for each time period for North Dakota and Minnesota projects are:

## NDDOT/City of Grand Forks/Grand Forks County Inflation Rates (4\% compounded annually)

```
Short-Range: }2023\mathrm{ to 2027 (1.316)
Mid-Range: }2028\mathrm{ to 2037 (1.801)
Long-Range: }2038\mathrm{ to 2045 (2.563)
```

## MnDOT/City of East Grand Forks/Polk County Inflation Rates (4.4\%compounded annually)

| Short-Range: | 2023 to $2027(1.352)$ |
| :--- | :--- |
| Mid-Range: | 2028 to $2037(1.908)$ |
| Long-Range: | 2038 to $2045(2.811)$ |

## Local Knowledge

In addition to the above referenced considerations, the final tool used to identify Current Revenue Projects from the Universe of Projects list was to consider local staff and elected official knowledge. Various local knowledge considerations such as project readiness, coordination with other scheduled projects, neighborhood and community support, elected official support, etc., were all considered in the Current Revenue Scenario project selection process.

## Current Revenue Scenario Planned Investments

Current Revenue Scenario investments for 2023-2045 are summarized in Table 7-3 and Figure 7-4. The majority of funding goes toward maintaining a state of good repair for the non-Interstate National Highway System. This investment direction advances the direction first established in the 2040 Streets and Highway plan and reflected in the 2019-2022 Transportation Improvement Program.
The $\$ 267$ million in investments is less than the $\$ 425$ million in forecast revenues largely because the revenue forecast includes the transportation portion of the recent increase in City of Grand Forks sales tax. The City of Grand Forks sales tax increase for transportation was included to ensure the local match and local cost components of federally funded projects could be shown as fiscally constrained. Revenues from the City of Grand Forks sales tax for transportation exceed the amount required for federal project local match and local components. Consistent with City policy, these remaining revenues can serve purposes beyond paying for costs related to federally funded transportation projects, including repairing or expanding local roads.
The City of Grand Forks local projects will be identified by the City Council. Any project being financed locally and needing federal approval must be amended into this fiscally constrained Current Revenue Scenario.

Table 7-3: Current Revenue Scenario Project Type Investment Amounts for 2023-2045*

| Project Type | Investment Amounts | Share |
| :---: | :---: | :---: |
| Safety | $\$ 4.8$ million | $2 \%$ |
| North Dakota Main Street | $\$ 39.1$ million | $14 \%$ |
| State of Good Repair: Interstate | $\$ 28.9$ million | $11 \%$ |
| State of Good Repair: Non- <br> Interstate NHS | $\$ 194.1$ million | $73 \%$ |
| Total | $\$ 267$ million | $100 \%$ |

*An additional $\$ 75$ million is programmed for investment through the 2019-2022 Transportation Improvement Program.

Figure 7-4: Current Revenue Scenario Investment Amounts

## North Dakota Current Revenue Scenario Projects

## NDDOT Planned State of Good Repair

NDDOT State of Good Repair projects were identified by NDDOT from their existing Capital Improvement Program and incorporated in their entirety within the Current Revenue Scenario. Roadways that have been targeted for State of Good Repair Investments by NDDOT are along the Interstate and NHS Principal Arterial system including Interstate 29, US Highway 2 (Gateway Drive), US 81 Business (Washington Street/32nd Avenue) and State Highway 297 (DeMers Avenue). Table 7-4 provides a summary of NDDOT State of Good Repair projects by time period. State of Good Repair project types included in the Current Revenue Scenario include chip seal, CPR and grind, mill and overlay, full reconstruction, painting the Kennedy and Sorlie Bridges in conjunction with MnDOT, as well as regional traffic signal upgrades.

Table 7-4: NDDOT State of Good Repair Planned Investments

| Time Period | Federall <br> State Match | City Match | YOE Total |
| :---: | :---: | :---: | :---: |
| Short-Range | $\$ 20,181,000$ | $\$ 1,440,000$ | $\$ 21,620,000$ |
| Mid-Range | $\$ 50,485,000$ | $\$ 4,732,000$ | $\$ 55,217,000$ |
| Long-Range | $\$ 44,150,000$ | $\$ 2,412,000$ | $\$ 46,561,000$ |
| Total | $\$ 114,816,000$ | $\$ 8,584,000$ | $\$ 123,398,000$ |

Source: GF/EGF MPO, 2018

## City of Grand Forks Planned State of Good Repair

City of Grand Forks federally funded State of Good Repair projects included in the Current Revenue Scenario focused on the NHS Principal Arterial system. These projects addressed pavement needs on roadways such as University Avenue, $4^{\text {th }}$ Avenue South, Minnesota Avenue, South $48^{\text {th }}$ Street, Columbia Road, $17^{\text {th }}$ Avenue South and Washington Street. A project is also included in conjunction with the City of East Grand Forks to rehabilitate the Point Bridge. Specific project types include maintenance and operations, Concrete Pavement Rehabilitation
(CPR), rehabilitation, reconstruction as well as traffic signal or roundabout improvements. Table 7-5 provides a summary of the City of Grand Forks federally funded State of Good Repair projects by time period.
Table 7-5: City of Grand Forks State of Good Repair Planned Investments (Federally Funded)

| Time Period | Federal/City <br> Match | Additional <br> City Funds | YOE <br> Total |
| :---: | :---: | :---: | :---: |
| Short-Range | $\$ 18,568,000$ | $\$ 4,744,000$ | $\$ 23,312,000$ |
| Mid-Range | $\$ 42,138,000$ | $\$ 13,906,000$ | $\$ 56,044,000$ |
| Long-Range | $\$ 40,117,000$ | $\$ 13,238,000$ | $\$ 53,355,000$ |
| Total | $\$ 100,823,000$ | $\$ 31,888,000$ | $\$ 132,711,000$ |

Source: GF/EGF MPO, 2018
The City of Grand Forks identified additional locally funded projects to bring segments of the federal aid system into state of good repair. A prioritized list of lllustrative projects by agency, identifying relative importance to one another, is available in Appendix $G$.

## City of Grand Forks Planned Main Street

The City of Grand Forks has identified a series of streetscape, bicycle/pedestrian, transit and downtown revitalization projects as potential "Main Street" program investments to compete for this recently established federal set-a-side available through NDDOT. The focus of these projects is to improve multimodal transportation options in the urban core of Grand Forks while also investing in decorative streetlighting, benches, planters, street signs and other streetscape amenities. Revitalization projects have been identified for east, west, north and south quadrants of the downtown, as well as reconstruction along North and South sections of $3^{\text {rd }}$ Street and $4{ }^{\text {th }}$ Street. Table 7-6 provides a summary of City of Grand Forks Main Street projects by time period.

Table 7-6: City of Grand Forks Main Street Planned Investments

| Time Period | YOE Total <br> Federal/City Match |
| :---: | :---: |
| Short-Range | $\$ 6,330,000^{\star}$ |
| Mid-Range | $\$ 8,293,000$ |
| Long-Range | $\$ 24,488,000$ |
| Total | $\$ 39,111,000$ |

*One or more of the short-range Main Street projects may be completed in 2021-2022.
Source: GF/EGF MPO, 2018

## Grand Forks County Planned State of Good Repair

Grand Forks County has identified State of Good Repair mill and overlay projects along their federal-aid eligible roadway network in the MPO planning area along County Road 6, CR 5, CR 17 and $32^{\text {nd }}$ Avenue west of Interstate 29. The County has also identified various chip seal projects throughout the County roadway network. Table 7-7 summarizes these projects by time period.

Table 7-7: Grand Forks County State of Good Repair Planned Investments

| Time Period | Federal/County <br> Match | County Only <br> Funds | YOE <br> Total |
| :---: | :---: | :---: | :---: |
| Short-Range | $\$ 1,316,000$ | $\$ 618,000$ | $\$ 1,934,000$ |
| Mid-Range | $\$ 2,702,000$ | $\$ 1,162,000$ | $\$ 3,864,000$ |
| Long-Range | $\$ 3,845,000$ | $\$ 1,459,000$ | $\$ 5,304,000$ |
| Total | $\$ 7,863,000$ | $\$ 3,239,000$ | $\$ 11,102,000$ |

[^8]
## Safety (North Dakota Portion of MPO)

Safety projects included in the Current Revenue Scenario were derived from the North Dakota Local Road Safety Plan, recent studies and local capital improvement programs. It is important to note that this Plan is in need of updating and efforts should be made in the future to include a short-term listing of projects that can be implemented. Safety projects will be funded through the Highway Safety Improvement Program (HSIP) and include miscellaneous intersection safety upgrades along with more significant investments. More significant investments include intersection improvements at Gateway Drive and Airport Drive and realignment of Stanford Road at Gateway Drive. Table 7-8 provides a summary of all safety/operation projects within the North Dakota portion of the MPO by time period.
Two projects are included in the Illustrative Projects list that respond to the higher than expected crash rates identified in Chapter 3 Existing Conditions. These projects are interchange improvements in the NE loop at Interstate 29 and Gateway Drive and intersection improvements at the Ralph Engelstad Arena entrance at Gateway Drive; they would cost about $\$ 19$ million if constructed in the mid-range time period of this plan.
Table 7-8: Safety Projects (North Dakota Portion of MPO*

| Time Period | YOE Total <br> Federal/City Match |
| :---: | :---: |
| Short-Range | $\$ 3,479,000$ |
| Mid-Range | $\$ 1,316,000$ |
| Long-Range | $\$ 0$ |
| Total | $\$ 4,795,000$ |

*Note: Short-range projects are from the North Dakota Local Road Safety Plan. Mid-range projects are candidates identified in recent studies and capital improvement programs and should be prioritized for funding through updates to the North Dakota Local Road Safety Plan and North Dakota Strategic Highway Safety Plan.
Source: GF/EGF MPO, 2018

## Planned "Projects of Significance" (North Dakota Portion of MPO)

Table 7-9 outlines planned "Projects of Significance" on the North Dakota side of the MPO planning area. Projects of $\$ 5$ million or more are identified for NDDOT and the City of Grand Forks. Grand Forks County did not have any projects identified in the Current Revenue Scenario that met this criterion.
Table 7-9: Planned "Projects of Significance" (North Dakota Portion of MPO) (>1=\$5 Million)

| Project <br> Type | Roadway | Lead <br> Agency | Termini | Time Period | Improvement | Investment |
| :---: | :---: | :---: | :---: | :--- | :--- | :--- |
| State of <br> Good <br> Repair | US 81 <br> Business | NDDOT | Grand Forks - <br> South <br> Washington <br> Street <br> (Hammerling to <br> 8th Avenue <br> South) | Short-Range | Reconstruct | $\$ 5,922,000$ |
| State of <br> Good <br> Repair | Various | NDDOT | Various | Short-Range | Regional Traffic <br> Signal Upgrade | $\$ 7,238,000$ |
| State of <br> Good <br> Repair | Columbia <br> Road | City of <br> Grand <br> Forks | Columbia Road <br> Railroad <br> Overpass North <br> of DeMers Ave. | Short-Range | Overpass | $\$ 7,481,000$ |

| Project Type | Roadway | Lead Agency | Termini | Time Period | Improvement | Investment |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| State of Good Repair | $32^{\text {nd }}$ <br> Avenue South | City of Grand Forks | Cherry Street to Belmont Road | Long-Range | Reconstruct | \$5,215,000 |

Source: GF/EGF MPO, 2018
**Columbia Road project includes two separate sets of termini. These projects being packaged together by the City of Grand Forks for a future NDDOT Urban Roads Program grant funding request.

## Minnesota Current Revenue Scenario Projects

## MnDOT Planned State of Good Repair

MnDOT's 20-year Minnesota Highway Investment Plan (MnSHIP) and 10-year Highway Investment Plan (HIP) communicate MnDOT's capital investment priorities and fiscally constrained project commitments. MnDOT's State of Good Repair projects in these Plans for the East Grand Forks/Polk County portion of the MPO planning area include painting the Kennedy and Sorlie bridges in conjunction with NDDOT, replacing the US Highway 2 Bridge
over River Road NW, rehabilitating the Sorlie Bridge, along with a variety of mill and overlay, resurfacing and concrete rehabilitation projects along US Highway 2, US Highway 2 Business and Minnesota State Trunk Highway 220. As noted in Table 7-10, these State of Good Repair improvements total $\$ 39,500,000$ through the 2045 planning horizon.

Table 7-10: MnDOT State of Good Repair Planned Investments

| Time Period | YOE Total <br> Federal/State Match |
| :---: | :---: |
| Short-Range | $\$ 10,300,000$ |
| Mid-Range | $\$ 9,000,000$ |
| Long-Range | $\$ 20,600,000$ |
| Total | $\$ 39,800,000$ |

Source: GF/EGF MPO, 2018

## City of East Grand Forks Planned State of Good Repair

City of East Grand Forks State of Good Repair projects were identified by the City for its federal-aid eligible roadways including Bygland Road, Rhinehart Drive, 10th Street NE, 5th Avenue NW, and 8th Avenue NW. Project types include rehabilitation and full reconstruction. Additionally, the City of East Grand Forks has a rehabilitation project planned for the Point Bridge in the short-range time period in cooperation with the City of Grand Forks. A summary of these investments is provided in Table 7-11.
Table 7-11: City of East Grand Forks State of Good Repair Planned Investments

| Time Period | YOE Total <br> Federal/City Match |
| :---: | :---: |
| Short-Range | $\$ 2,738,000$ |
| Mid-Range | $\$ 6,392,000$ |
| Long-Range | $\$ 6,803,000$ |
| Total | $\$ 15,933,000$ |

Source: GF/EGF MPO, 2018

## Polk County Planned State of Good Repair

Planning efforts were coordinated with Polk County to identify State of Good Repair projects, which has led to identification of mill and overlay projects along CSAH 72 , CSAH 73 and CSAH 76 . The CSAH 72 project is planned for the short-range time period and the CSAH 73 and CSAH 76 projects are planned for the mid-range time period. Table 7-12 below provides a summary of these investments.
Table 7-12: Polk County State of Good Repair Planned Investments

| Time Period | YOE Total <br> FederallCounty Match |
| :---: | :---: |
| Short-Range | $\$ 203,000$ |
| Mid-Range | $\$ 638,000$ |
| Long-Range | $\$ 0$ |
| Total | $\$ 841,000$ |

Source: GF/EGF MPO, 2018

## Safety (Minnesota Portion of MPO)

The Current Revenue Scenario does not yet identify fiscally constrained safety projects in the Minnesota portion of the metropolitan area. Regional partners will work together to quickly identify projects to be funded using Highway Safety Improvement Program (HSIP) funds.

The Illustrative Projects list includes more than $\$ 18$ million in potential safety projects derived from the MnDOT District 2 Safety Plan, the Polk County Safety Plan, and a recent corridor study along Bygland Road. Examples of larger investments include signal and turn lane upgrades along US 2 and roundabout upgrades along Bygland Road at $13^{\text {th }}$ Avenue and also $5^{\text {th }}$ Avenue. Table $7-13$ provides a summary of all safety/operation projects within the Minnesota portion of the MPO by time period.
Table 7-13: Safety (Minnesota Portion of MPO)

| Time Period | YOE Total <br> Federal/City/County Match |
| :---: | :---: |
| Short-Range | $\$ 0$ |

## Planned "Projects of Significance" (Minnesota Portion of MPO)

Table 7-14 outlines planned "Projects of Significance" on the Minnesota side of the MPO planning area. Projects of 5 million dollars or more are identified for MnDOT and the City of East Grand Forks. and Polk County.

Table 7-14: Planned "Projects of Significance" (Minnesota Portion of MPO) (>/= \$5 Million)

## Fiscally Constrained Program of Projects

The following provides a summary of the financially constrained implementation plan based upon the GF/EGF MPO's forecasted local, state and federal revenues and inflation adjusted expenditures by short-range (20232027), mid-range (2028-2037) and long-range (2038-2045) time period. Expenditures are financially constrained by Main Street, Safety and State of Good Repair eligible funding program and associated local match forecasts from 2023 through 2045. Project expenditures are also constrained within each individual funding program and within each time period.
As a result of the FAST Act required emphasis on State of Good Repair and safety investments and the NDDOT, MnDOT and MPO reinforcement of this emphasis, all of the fiscally constrained program of projects in this Plan through 2045 are State of Good Repair, Safety and Main Street investments.

## Expected Revenue and Expenditure Estimates

The fiscally-constrained program of projects (Current Revenue Scenario) represents the financial balancing of the Grand Forks/East Grand Forks 2045 Street and Highway Plan recognized federally eligible project investment needs and corresponding revenues that are "reasonably expected to be available" over the 2023 to 2045 planning
horizon. As discussed earlier in this chapter and in various other locations of this Plan, the FAST Act requires that system preservation and maintenance needs for pavements and bridges and Safety needs be addressed before other discretionary transportation system needs are funded. This investment philosophy is also supported by NDDOT, MnDOT and the GF/EGF MPO.

Table 7-15 summarizes the GF/EGF MPO expenditures and revenues for the North Dakota portion of the MPO planning area. Table 7-16 summarizes the GF/EGF MPO expenditures and revenues for the Minnesota portion of the MPO planning area. During development of the fiscally constrained plan, a threshold tolerance of $+/-8$ percent was established for the purposes of balancing revenues and expenditures by time period.
Table 7-15: Fiscally Constrained Program for North Dakota Portion of Grand Forks-East Grand Forks MPO*

| Time Period | Planned Expenditures |  |  | Forecast Revenue |  | Balance |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | NDDOT | City of Grand Forks | Grand Forks County | State and Federal | City/County |  |
| ShortRange (20232027) | \$20,951,000 | \$13,902,000** | \$3,253,000 | \$41,671,000 | \$28,297,000 | $\begin{aligned} & +\$ 32 \\ & \text { million } \end{aligned}$ |
| MidRange (20282037) | \$50,485,000 | \$28,247,000 | \$3,864,000 | \$96,805,000 | \$65,737,000 | $\begin{aligned} & +\$ 80 \\ & \text { million } \end{aligned}$ |
| LongRange (20382045) | \$44,150,000 | \$40,137,000 | \$5,304,000 | \$92,499,000 | \$32,841,000 | $\begin{aligned} & +\$ 35.8 \\ & \text { million } \end{aligned}$ |
| Subtotal | \$115,586,000 | \$82,286,000 | \$12,421,000 | \$230,975,000 | \$126,875,000 |  |

*The 2019-2022 Transportation Improvement program includes an additional $\$ 63$ million in forecast revenues and planned expenditures for the North Dakota portion of the MPO area.
**One or more of the short-range Main Street projects may be completed in 2021-2022, when there is an additional $\$ 1.3$ million in federal funding available.

*The 2019-2022 Transportation Improvement Program includes an additional $\$ 12$ million in forecast revenues and planned expenditures for the Minnesota portion of the MPO area.
Source: GF/EGF MPO, 2018
A complete listing of fiscally constrained Current Revenue Scenario projects by agency and funding program can be found in Appendix F. Figure 7-5 also highlights Current Revenue Scenario "Projects of Significance" equal to or greater than $\$ 5$ million, as summarized earlier in this chapter in Table 7-9 and Table 7-14.

Figure 7-5: Current Revenue Scenario "Projects of Significance"

## Illustrative Projects

After going through the project prioritization and vetting process described in this chapter, a variety of projects were not included in the Current Revenue Scenario. These illustrative projects have had an identified regionally significant transportation purpose and need, however, at this point in time, forecasted federal, state and local revenues are not available for construction through 2045. A prioritized list of lllustrative projects by agency, identifying relative importance to one another, is available in Appendix G. A summary of some of the highest ranked illustrative projects from the prioritization tool are outlined in Table 7-17 and in Figure 7-6.
The Red River crossing projects, $32^{\text {nd }}$ Avenue $S$ and Merrifield Road, shown on the bottom of the table are included on the list as a result of policy direction from the GF/EGF MPO Board that was made considering input from this planning process and public input. The river crossing projects will provide regional connectivity across the Red River, supplementing the three existing river crossings that are forecast to operate with significant congestion in 2045. The 2040 Plan also included the same crossings as Illustrative "Projects of Significance" although the 2040 plan prioritized Merrifield Road over $32^{\text {nd }}$ Avenue S. As a part of this plan they have not been prioritized for the following reasons:

- There has been interest in the community in these two river crossing locations for "local traffic" and "bypass" since the late 1990s.
- The current analysis again showed that the Merrifield Road river crossing served "bypass" traffic and the $32^{\text {nd }}$ Avenue S river crossing served "local" traffic. There are different transportation benefits for each crossing location.
- The Merrifield Road and $32^{\text {nd }}$ Avenue S. river crossings would be led by different agencies. Merrifield Road would be a Grand Forks County and Polk County led project. The $32^{\text {nd }}$ Avenue S crossing would be a City of Grand Forks and City of East Grand Forks led project.
- Both projects had a benefit-cost ratio over 1 based on the planning analysis completed, indicating both projects are anticipated to benefit the community when compared to cost of construction.
- Since both river crossing locations would benefit the region and funding would come from different sources, including both crossing as illustrative "Projects of Significance" provides some flexibility if one crossing is successful in obtaining funding.
Important activities that will be necessary to make a river crossing a success include the following:
- Continue to explore for additional funding sources for a river crossing.
- Political leaders in North Dakota and Minnesota should work collaboratively to communicate the need for funding to state and federal political leaders.
- Local land use authorities should take steps to preserve corridor right-of-way for public use.
- Lead transportation authorities should complete required environmental documentation when possible.

More information regarding the river crossings and how they impact the overall regional transportation network is available in Appendix C.
Table 7-17: Illustrative "Projects of Significance"

| Project Type | Project Description |
| :---: | :---: |
| State of Good Repair | Non-NHS Federal Aid Eligible Streets/Highways |

| New Grade Separations | US 2 (Gateway Drive) east of Interstate 29 <br> 42nd Street: North of DeMers Avenue |
| New River Crossings | 32nd Avenue |
| Merrifield Road |  |

Figure 7-6: Summary of Illustrative Projects of Significance

## Right-of-Way and Corridor Preservation

Right-of-way for future transportation infrastructure is a valuable asset and difficult to obtain. As the Grand ForksEast Grand Forks area continues to grow and develop, local partners should work together to preserve right-ofway for public use when project locations become certain and property becomes available. Local government can help preserve right-of-way by identifying transportation right-of-way needs in local comprehensive and zoning plans in coordination with transportation providers. Other strategies include advanced purchase, subdivision techniques, official mapping, and corridor signing; these strategies should be carefully implemented in coordination with project development and environmental documentation. Preserving right-of-way can reduce project costs and streamline project development.

In addition to preserving right-of-way, local partners should work together to preserve corridor capacity. Local government can preserve corridors by adopting and implementing access management guidelines that can be implemented through the development review process.

## Environmental Mitigation Considerations

The GF/EGF MPO's transportation planning activities are performed at the regional level and projects identified in this plan require more detailed scoping and design analysis in order to adequately determine social, economic, and environmental impacts. Environmentally-sensitive areas, including wetlands, species of concern, and identified cultural sites are shown in Figure 7-7. Many of these sensitive areas require a project-level analysis to determine potential impacts and mitigation activities. Some areas are yet to be identified and will only become known once a project-level analysis is completed. When a programmed project is ready for project implementation, the project sponsor will be responsible for conducting the necessary analyses as required by state and federal regulations to determine the type, location, and impact to environmentally sensitive areas within the project study area.

As part of long-range transportation plans, MPOs are required to consult with Federal, State, and Tribal land management, wildlife, and regulatory agencies on possible environmental mitigation activities that may be appropriate for the types of system improvement projects identified in the plan. The GF/EGF MPO solicited input from several regional agencies as part of this plan update. Agencies were notified via a letter and requested to provide input on the projects and proposed environmental mitigation activities identified during the planning process. There were 50 different agencies from which comments were solicited.

## Environmental Mitigation Activities

The GF/EGF MPO and its jurisdictional partners are committed to minimizing and mitigating the negative effects of transportation projects on the natural and built environments. Not every project will require the same amount of review or mitigation. For example, preservation or State of Good Repair projects typically have no or limited impacts as they are located within previously disturbed or built environments. New roadways or expansion projects have a greater likelihood for impacts as the areas of disturbance are greater in size and may extend beyond current road right of ways. The GF/EGF MPO and its planning partners understand that project specific mitigation efforts will depend on how severe the impact on environmentally sensitive areas is expected to be.

Considerations should be made during the project design phase to avoid environmentally-sensitive areas, where feasible. If avoidance is not possible, strategies to minimize off-site disturbance in sensitive areas should be strongly considered, to preserve air and water quality, to limit tree removal, to minimize grading and other earth disturbance, to incorporate Best Management Practices (BMP) for erosion and sediment control, and limit noise and vibration impacts. Impacts that cannot be avoided or minimized should be mitigated. The mitigation planning process should solicit public input and offer alternative designs or alignments and mitigation strategies for comment by the GF/EGF MPO, state and local governments.

For major construction projects, such as new roadways, or for projects that may have a metropolitan-wide environmental impact, context sensitive solutions should be considered. This process should include considerable public participation and alternative design solutions are used to lessen the impact of the project.
The following three steps process will be used by the GF/EGF MPO and its planning partners to determine the type of mitigation strategy to apply for any given project, as it advanced from the planning stage:

1. Identify environmentally sensitive areas throughout the project study area.
2. Determine how and to what extent the project will impact these environmentally-sensitive areas.
3. Develop appropriate mitigation strategies to lessen the impact these projects have on the environmentally-sensitive areas.
Table 7-18 details mitigation activities that will be considered by the GF/EGF MPO as projects move through the project development process. Sensitive environmental features identified in Figure 7-7 will need to be considered as Current Revenue Scenario projects identified in Appendix F move forward through future environmental review and project development processes.

Table 7-18: Environmental Mitigation Activities

| Environmental Concern | Potential Mitigation Activities |
| :--- | :--- |
| Wetlands or Water Resources | Mitigation sequencing requirements involving avoidance, <br> minimization, compensation (could include preservation, creation, <br> restoration, in lieu fees, riparian buffers); design exceptions and <br> variances; environmental compliance monitoring |
| Forested and Other Natural <br> Areas | Avoidance, minimization; replacement property for open space <br> easements to be of equal fair market value and of equivalent <br> usefulness; design exceptions and variances; environmental <br> compliance monitoring |
| Agricultural Areas | Avoidance, minimization; design exceptions and variances; <br> environmental compliance monitoring |
| Endangered and Threatened <br> Species | Avoidance, minimization; time of year restrictions; construction <br> sequencing; design exceptions and variances; species research; <br> species fact sheets; memoranda of agreements for species <br> management; environmental compliance monitoring |
| Ambient Air Quality | Transportation control measures, transportation emission reduction <br> measures |
| Neighborhoods, Communities, <br> Homes, and Businesses | Impact avoidance or minimization; context sensitive solutions for <br> communities (appropriate functional and / or aesthetic design <br> features) |
| Environmental Justice (EJ) | Avoidance, minimization; engage EJ populations in the planning <br> process; follow procedures in MPO's Environmental Justice <br> Program Manual |
| Cultural Resources (historical | Avoidance, minimization; landscaping for historic properties; <br> preservation in place or excavation for archeological sites; <br> Memoranda of Agreement with the State Historical Society of North <br> Dakota and the Minnesota Historical Society; design exceptions <br> and variances; environmental compliance monitoring |
| cultural areas, etc.) |  |

## Environmental Justice

Executive Order 12898 directs Federal agencies to take appropriate and necessary steps to identify and address disproportionately high and adverse effects of Federal projects, including the transportation planning process, on the health or environment of minority and low-income populations to the greatest extent practical and permitted by law. USDOT Order 5610.2(a) sets forth the USDOT policy to consider environmental justice (EJ) principles in all (USDOT) programs, policies, and activities. It describes how the objectives of EJ will be integrated into planning and programming, rulemaking, and policy formulation. The Order sets forth steps to prevent disproportionately high and adverse effects to minority or low-income populations through Title VI analyses and EJ analyses conducted as part of Federal transportation planning and NEPA provisions. Disproportionate is defined in two ways: the impact is predominantly borne by the minority or low-income population group, or the impact is appreciably more severe than that experienced by non-minority or non-low-income populations.

The MPO addresses Environmental Justice to ensure non-discrimination concerning enacted transportationrelated laws, regulations, and policies. The MPO has developed an Environmental Justice Program Manual designed to provide guidance in meeting EJ mandates and structuring a public participation plan at the project or study level. To certify compliance with, and to address environmental justice, the MPO:

- Identifies residential, employment, and transportation patterns of low-income and minority populations so that their needs can be identified and addressed, and the benefits and burdens of transportation investments can be fairly distributed.
- Ensures that the long-range transportation plan and the transportation improvement program (TIP) comply with the tenets of Environmental Justice.
- Utilizes public involvement processes to eliminate participation barriers and engage minority and lowincome populations in transportation decision making.
According to the most recent Environmental Justice Program Manual, minority populations in Grand Forks were most concentrated east of Columbia Mall between 24th Avenue South and 32nd Avenue South and north of Grand Cities Mall between 13th Avenue South and 17th Avenue South. As illustrated in Figure 7-8, concentrations of poverty greater than 50 percent are also located near the two shopping centers, as well as near both downtown areas. As illustrated in Figure 7-9, the fiscally constrained, Current Revenue Scenario projects are not concentrated in environmental justice communities. These areas will be evaluated further during the future project development process for the Current Revenue Scenario projects identified in Figure 7-9 and Appendix F.

## Source: Grand Forks-East Grand Forks MPO Performance Based <br> Planning

MAP-21 and FAST Act requires incorporation of performance based planning in the development of the Grand Forks - East Grand Forks MPO metropolitan transportation plan. The requirement in these US Laws defined that the Plan shall include, to the maximum extent practicable, a description of the anticipated effect of the Plan toward achieving the performance measures by linking them with the investment priorities.

Performance-based planning is an approach to applying performance management principles to transportation system policy and investment decisions. This approach provides a link between short-term management and long-range decisions about policies and investments that an agency makes for its transportation system. Performance-based planning is a system-level, data-driven process to identify strategies and investments. For MPOs, performance measures provide a nuanced means of assessing progress toward meeting the intent of the Plan.

MAP-21 and FAST Act place increased emphasis on performance management within the Federal Aid highway program, including development of national performance measures with targets set by State DOTs and MPOs. The Grand Forks-East Grand Forks MPO performance measures and targets are discussed in Chapter 3.

The 2045 Street/Highway Plan implements the now promulgated required national performance measures. The Plan integrates the safety plans developed by partner agencies, including each state's Strategic Highway Safety Plan and more localized strategic highway safety plans that apply state-level emphasis areas and strategies consistent with local context and intent to implement. The 2045 Plan also identifies projects for Highway Safety

Improvement Program (HSIP) funding (see Table 7-8 and Table 7-13). These projects are expected to have a positive impact toward meeting safety targets in North Dakota.
This plan also acknowledges the need to update plans that prioritize safety-related projects for HSIP funding. A concern with these safety plans, particularly on the Minnesota side, has been the lack of MPO inclusion in the safety planning process. The most recent Minnesota Strategic Highway Safety Plan greatly improved MPO engagement, but this practice has not carried forward with each respective District and/or County Safety plan update. Further, the Minnesota process for programming funds from the Highway Safety Improvement Program has historically neglected the active engagement of MPOs. Routinely, MnDOT solicits, vets and programs projects without involvement from Greater Minnesota MPOs. This plan recommends improvements to the HSIP project solicitation process, and efforts are underway to improve it.
The MPO regularly completes corridor specific studies. Safety is often one of the leading issues that create the need for the more in-depth analysis of the corridors transportation system. As a standard operating practice, the MPO conducts these studies through the lens of the needs of all users regardless of mode dominance. Lately, some specific studies on the Minnesota has led to adopting future improvement projects that should be prioritized for investment and amended into this Plan.

The MPO conducted a project identification and selection process to assist it in planning for projects that help the region meet its performance targets. Each possible project was reviewed through criteria pertinent to the project's likely funding source. Safety is also considered.

The 2045 Street/Highway Plan emphasizes projects that support State of Good Repair for pavement and bridges on the Interstate, non-Interstate National Highway System, and Federal Aid-Eligible System in North Dakota and Minnesota (see Table 7-4, Table 7-5, Table 7-6, Table 7-7, Table 7-10, Table 7-11, and Table 7-12). These projects are expected to have a positive impact toward meeting pavement and bridge condition targets in North Dakota and Minnesota.

The Grand Forks-East Grand Forks MPO understands it is in the early stages of developing a fully compliant, performance-based MTP. As multiple years of data is collected for the performance measures and their targets, the MPO will monitor performance and evaluate if trends are moving toward meeting the targets. The Grand Forks-East Grand Forks MPO commits to making adjustments to planning strategies to meet the performance targets if the desired results are not being met.

## Appendix A

Grand Forks-East Grand Forks Metropolitan Transportation Plan Linkage to NDDOT and MnDOT Plans

## Appendix A. Grand Forks-East Grand Forks Metropolitan Transportation Plan Linkage to NDDOT and MnDOT Plans

Table 1: Linkage between Grand Forks-East Grand Forks Metropolitan Transportation Plan and North Dakota DOT Statewide Strategic Transportation Plan Goals

|  | NDDOT Statewide Strategic Transportation Plan Goals |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Grand Forks-East Grand Forks Metropolitan Transportation Plan Goal | Goal 1: Safe and Secure Transportation The importance of safe and secure transportation includes both personal and freight mobility, it extends to transportation infrastructure and services. | Goal 2: Sustainable and Reliable Mobility Personal mobility includes going to work, accessing health care, attending school and social functions, running errands and many other trip purposes. Personal mobility in rural and urbanized areas is viewed differently in terms of trip time and congestion. Freight mobility encompasses transporting bulk grain, crude oil transloaded from trucks to rail and pipelines, in bound raw materials for manufacturing, and a host of other movements. | Goal 3: Diversified and Sufficient Funding for Transportation Priorities <br> For funding to be sufficient, it must be tied to system goals and priorities. To achieve sufficiency, transportation revenues must be derived from multiple sources that are reliable, equitable, diversified, flexible, timely, and adequate. | Goal 4: Communication and Cooperation Effective communication is a two-way process that results in a common perception. Common perception results in cooperation that leads to collaborative outcomes. | Goal 5: Strong Economic Growth with Consideration of Environmental, Cultural and Social Impacts <br> The transportation system, consisting of both infrastructure and services, exists to move people and goods. The movement of goods supports economic activity, which supports our quality of life. Important to sustaining our quality of life is the appropriate consideration of transportation impacts on our environmental, cultural, and social resources. Understanding the relationship of land use and the generation of traffic, particularly truck traffic, is key to the development of a sustainable transportation system. |
| Economic Vitality <br> Support the economic vitality through enhancing the economic competitiveness of the metropolitan area by giving people access to jobs, and education services as well as giving business access to markets. |  | Link |  |  | Link |
| Security <br> Increase security of the transportation system for motorized and non-motorized uses. | Link |  |  |  |  |
| Accessibility and Mobility <br> Increase the accessibility and mobility options for people and freight by providing more transportation choices. |  | Link |  |  |  |
| Environmental/ Energy/Quality of Life <br> Protect and enhance the environment, promote energy conservation, and improve quality of life by valuing the unique qualities of all communities - whether urban, suburban, or rural. |  |  |  |  | Link |
| Integration and Connectivity <br> Enhance the integration and connectivity of the transportation system, across and between modes for people and freight, and housing, particularly affordable housing located close to transit. |  | Link |  |  | Link |
| Efficient System Management <br> Promote efficient system management and operation by increasing collaboration among federal, state, local government to better target investments and improve accountability. |  |  |  | Link |  |
| System Preservation <br> Emphasize the preservation of the existing transportation system by first targeting federal funds towards existing infrastructure to spur revitalization, promote urban landscapes and protect rural landscapes. |  |  | Link |  |  |
| Safety <br> Increase safety of the transportation system for motorized and non-motorized uses. | Link |  |  |  |  |

| Grand Forks-East Grand Forks Metropolitan Transportation Plan Goa | Goal 1: Safe and Secure Transportation The importance of safe and secure transportation includes both personal and freight mobility, it extends to transpor infrastructure and services |  | Goal 3: Diversified and Sufficient Funding for Transportation Priorities For funding to be sufficient, it must be tied to system goals and priorities. ## PUBLIC INPUT MEETING

## WHY?

To discuss the updating of the Street and Highway element of the Transportation Plan. The purpose of this first meeting is to inform the public that an update is taking place, to provide the schedule, to give existing conditions and to gather initial public thoughts on important issues to address.

## When?

August 30th, 2017
5:00 PM to 7:00 PM
Presentation at 5:45 PM

## Where?

Empire Arts Center 415 DeMers Ave Grand Forks, ND

## OPEN HOUSE CONDUCTED BY

## Grand Forks - East Grand Fo Metropolitan Planning Organiz

Representatives from the Grand Forks/ East Grand Forks Metropolitan Planning Organization (GF-EGF MPO) and Kimley-Horn/WSB Consulting Team will be on hand to answer your questions and discuss your concerns. Additional information available at www.theforksmpo.org

WRITTEN STATEMENTS or comments about this project must be mailed by September 15th, to Earl Haugen, GF-EGF MPO, PO Box 5200, Grand Forks, ND 58206
Email: info@theforksmpo.org
Note "Street and Highway" in email subject heading.
The GF-EGF MPO will consider every request for reasonable accommodation to provide:

- an accessible meeting facility or other accommodation for people with disabilities,
- language interpretation for people with limited English proficiency (LEP), and
- translations of written material necessary to access GF-EGF MPO programs and information.

Appropriate provisions will be considered when the MPO is notified at least 5 days prior to the meeting date or the date the written material translation is needed.

To request accommodations, contact Earl Haugen, at 701-746-2660 or earl.haugen@theforksmpo.org.

## Public Meeting \#1 Summary

## Time and Location

Wednesday, August 30, 2107
5:00-7:00 p.m.
Presentation at 5:45 p.m.

## Empire Arts Center

415 DeMers Avenue
Grand Forks, ND 58201

## Purpose of Meeting

The purpose of this public meeting was to introduce the Street and Highway Plan Update to the public, present the 2045 Long-Range Transportation Plan (LRTP) vision statement and draft goals, and provide information on existing conditions and planned land use in the MPO area. Attendees were also asked to provide feedback on the condition of streets and highways in the MPO area to help guide the process for prioritizing projects in the Street and Highway Plan Update.

## Materials

Display boards were available that provided an overview of the LRTP and Street and Highway Plan Update, the schedule, the 2045 LRTP vision statement and draft goals, existing conditions, and planned land use. An interactive mapping activity was also available on a display board and as an interactive map on the project website.

## Participants

Twenty-two attendees signed in on the sign-in sheets. Of these 22, 17 completed the NDDOT Title VI Public Participation Survey. The results of this survey are summarized below.

- Sex
- Number of respondents: 17
- Male: 11 (65\%)
- Female: 6 (35\%)
- Disability
- Number of respondents: 17
- Yes: 0 (0\%)
- No: 17 (100\%)
- Age
- Number of respondents: 17
- 34 and younger: 2 (12\%)
- 35-54: 8 ( $47 \%$ )
- 55 and older: 7 (41\%)
- Race
- Number of respondents: 17
- White: 16 (94\%)
- Other: 1 (6\%)
- Language most frequently spoken in your home
- Number of respondents: 17
- English: 17 (100\%)
- Do you receive public assistance?
- Number of respondents: 16
- No: 16 (100\%)
- Indicate how you heard about the event (note that some respondents checked more than one box)
- Number of respondents: 17
- Internet: 6 (35\%)
- Radio: 1 (6\%)
- Mailing: 2 (12\%)
- Newspaper: 5 (29\%)
- Other: 5 (29\%)

## Input Received

## Comment Forms

Two written comments were received. One was a safety concern that has been incorporated into the mapping activity results summarized below. The other comment noted a preference to keep performance measures to only those that are required.

## Interactive Map

The input from the mapping activity at the public meeting was added to the interactive map on the project website to compile all the feedback received. As of September 15, 2017, 97 different comments had been recorded on the interactive map.

## Respondents

Eighteen respondents completed the optional demographic survey. A summary of the demographic information collected is provided below.

- What is your age?
- Number of respondents: 18
- 18 to $34: 8$ ( $44 \%$ )
- 35 to $44: 3$ ( $17 \%$ )
- 45 to $55: 4$ ( $22 \%$ )
- 55 to 64: 2 (11\%)
- 65 or older: 1 (6\%)
- What is your gender?
- Number of respondents: 18
- Male: 9 (50\%)
- Female: 9 ( $50 \%$ )
- What is your race?
- Number of respondents: 17
- White: 17 (100\%)
- What is your ethnicity?
- Number of respondents: 15
- Not Hispanic or Latino: 15 (100\%)
- What is your home zip code?
- Number of respondents: 18
- $56721: 5$ (28\%)
- 58201: 8 (44\%)
- 58203: 5 (28\%)
- If you work or are in school, what is your work/school ZIP Code?
- Number of respondents: 16
- 56721: 4 ( $25 \%$ )
- 58201: 4 (25\%)
- 58202: 6 (38\%)
- 58203: 2 (12\%)

## Comments Received

The 97 comments received were broken down into the following categories:

- Access: 19 (20\%)
- Congestion/Driving Conditions: 8 (8\%)
- Pavement Conditions: 10 (10\%)
- Safety: 42 (44\%)
- Signs/Signals: 7 (7\%)
- Other: 11 (11\%)

The locations of these comments are shown in Figures 1 through 6. The content of the comments will be analyzed to inform the range of alternatives developed.

Figure 1: Locations of Access Comments

Figure 2: Locations of Congestion/Driving Conditions Comments

Figure 3: Locations of Pavement Conditions Comments

## Next Steps

Public Meeting \#2 is anticipated to occur in November 2017. This public meeting will include discussion on the existing plus future network and the transportation issues that have been identified. In addition, more detailed information on goals, objectives, and performance measures will also be presented, and the concept of a financially constrained transportation plan will be introduced.

Grand Forks-East Grand Forks MPO
STREET/HIGHWAY PLAN UPDATE

# Welcome Public Meeting 

## Grand Forks-East Grand Forks Metropolitan Planning Organization

|  | Grand Forks - East Grand Forks Metropolitan Planning Organization |
| :---: | :---: |

## Overview

## What is a Long-Range Transportation Plan (LRTP)?

- Sets a direction and strategies to help shape a region's transportation network
- Includes three elements:

?Streets and highways

## Transit

Pedestrians and bicycles

- The MPO is required to update its LRTP every 5 years - the last update for Grand Forks-East Grand Forks was completed in 2013

## ? What's an MPO?

Federal law requires that all urbanized areas in the US with populations over 50,000 people establish Metropolitan Planning Organizations (MPO) responsible for area transportation planning and programming services.

## $+$ <br> What is the Street and Highway Plan Update?

- This part of the LRTP will develop a performance-based investment decision framework for the streets and highways in the MPO area that is consistent with requirements of the FAST Act

## Who is I nvolved?

- North Dakota Department of Transportation
- Minnesota Department of Transportation
- City of Grand Forks
- City of East Grand Forks
- Grand Forks County
- Polk County
- Federal Highway Administration
- Federal Transit Administration
- Residents and regional stakeholders

## YOUR INPUT IS I MPORTANT TO US!

$\square$ Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE

## M O O A CHEME

We want to hear your thoughts on the condition of streets and highways in the Grand Forks-East Grand Forks MPO area. Consider characteristics such as pavement condition, sight lines, congestion, and other related topics. This feedback will help guide the process for prioritizing projects in the Streets and Highway Plan Update.

## 2045 LRTP Vision Statement and Draft Goals

Vision Statement: The Grand Forks-East Grand Forks Long Range
Transportation Plan (LRTP) envisions a community that provides a variety of complementary transportation choices for people and goods that is fiscally constrained.

|  | GOAL | DESCRIPTION |
| :---: | :---: | :---: |
| 1 | Economic Vitality | Support the economic vitality through enhancing the economic competitiveness of the metropolitan area by giving people access to jobs and education services as well as giving business access to markets |
| 2 | Security | Increase the security of the transportation system for motorized and non-motorized uses |
| 3 | Accessibility and Mobility | Increase the accessibility and mobility options for people and freight by providing more transportation choices |
| 4 | Environmental/ Energy/ Quality of Life | Protect and enhance the environment, promote energy conservation, and improve quality of life by valuing the unique qualities of all communities - whether urban, suburban, or rural |
| 5 | Integration and Connectivity | Enhance the integration and connectivity of the transportation system across and between modes for people, freight, and housing, particularly affordable housing located close to transit |
| 6 | Efficient <br> System <br> Management | Promote efficient system management and operation by increasing collaboration among federal, state, and local government to better target investments and improve accountability |
| 7 | System Preservation | Emphasize the preservation of the existing transportation system by first targeting federal funds towards existing infrastructure to spur revitalization, promote urban landscapes, and protect rural landscapes |
| 8 | Safety | Increase safety of the transportation system for motorized and non-motorized uses. |
| 9 | Resiliency* | Improve resiliency and reliability of the transportation system and reduce or mitigate storm water impacts of surface transportation |
| 1.0 | Tourism* | Enhance travel and tourism |

## Existing Conditions

## Existing Conditions

## 2045 Conditions

## 2045 Land Use Plan <br> Grand Forks

The 2045 Grand Forks Future Land Use Plan focuses on more compact development and uses a three-tier system for managing timing and sequencing of growth:

- TIER 1 - includes existing city limits and is the area where all projected growth within the 2045 planning horizon will be accommodated
- TIER 2 - Urban Reserve Area that only allows residential development on existing platted lots and only if no other Tier 1 land is available
- TIER 3 - agricultural preservation area

## 2045 Land Use Plan

East Grand Forks

The East Grand Forks 2045 Land Use Plan:

- Promotes compact infill development and responsible greenfield development
- Utilizes the existing flood protection system as an interim growth boundary, with phased land available to accommodate anticipated growth within the 2045 planning horizon

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE

## Plan Overview: Background

\author{

- Project Area Issues Map
}

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE

## Plan Overview: Purpose

- Update street/highway element of the 2040 plan
- Communicate local investment needs and priorities
- Address federal regulations in the FAST Act
- Required to update every five years

## Plan Overview: Organizational Chart

## Plan Outcomes

1. Update or establish vision, goals, objectives, performance measures and performance targets
2. Understand existing conditions and issues
3. Identify and evaluate planned projects and potential alternatives

- Apply updated performance measures and targets

4. Establish financial plan
5. Identify future network recommendations
6. Establish implementation priorities

## Open House Overview: Performance Measures, Metrics and Targets

| Eement | Description |
| :--- | :--- |
| Performance Measure | An expression of a trend or desired trend that <br> is used to establish a metric and target. |
| Performance Metric | The specific dataset or information used to <br> track a given performance measure. |
| Performance Target | Maximum and minimum thresholds for <br> success and/or failure. |

## Open House Overview: Existing Conditions

- National Highway System (NHS) and other federal-aid roads
- Functional classification
- Intersection level of service
- Crash rates
- Pavement condition
- BNSF trackage
- Truck traffic volumes
- General traffic volumes

## Open House Overview: Key Projects in MPO 2017-2020 <br> Transportation I mprovement Program (TI P)

$\underline{2017}$

- Kennedy Bridge Rehabilitation
- South Columbia Road 2 to 5 Lane Expansion and New Signal
- South Columbia Road Turn Lanes at 17th Avenue South
$\underline{2019}$
- 32nd Avenue Corridor Safety Improvements
- Demers Avenue (Columbia Rd/30th St.) Traffic Signal/Turn Lanes
- Downtown GF Demers Avenue Reconstruction/Mill \& Overlay

2018

- 42nd St Reconstruction (University to US2)
- Central Avenue Multi-Use Trail
- Rhinehart St Reconstruction
- EGF Point Bridge Mill \& Overlay

2020

- Gateway Drive/55th Street Traffic Signal/Turn Lanes
- University Avenue Mill \& Overlay

## Open House Overview: Key Projects in MPO 2021 TI P Under Consideration

## Minnesota

- US 2 and US Bus 2 Intersection Improvements
- Funds are programmed, final project scope being set

North Dakota

- Washington St Underpass Reconstruction
- N. Columbia Rd Reconstruction (2nd St thru University Ave)

## Plan Public Engagement

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE

## Plan Public Engagement: Ways To Stay I nvolved

- Public meetings
- Attend the open houses - there will be four
- Online
- Project website - get interactive with online mapping
- Facebook page - help us spread the word
- Stay in touch
- Provide your contact information to stay informed
- Provide feedback on comment forms
- Got other ideas? Tell us what works for you

# Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE 

## What is the purpose of the street/ highway plan update?

The purpose of this project is to update the street and highway element of the Grand Forks-East Grand Forks Metropolitan Planning Organization's (MPO) Long-Range Transportation Plan (LRTP). The MPO is required to update its LRTP every five years, and the last update for Grand Forks-East Grand Forks was in 2013.

LRTPs include three elements:

Streets and highways

Transit

Pedestrians and bicycles

This update will communicate local investment needs and priorities for streets and highways in the MPO area and address the federal regulations in the Fixing America's Surface Transportation (FAST) Act. The transit and pedestrian/bicycle elements are being addressed separately.

## How can I engage with the plan update?

There will be multiple opportunities to learn about the project and provide input regarding the street and highway system in the MPO area, both in person and online. We'd love to hear from you!
» Come talk to us at the public meetings
» Use the interactive map on the project website to provide your thoughts regarding issues with and opportunities for the streets and highways in the MPO area
» Check out the project website to see project reports and other materials and provide your comments
» Sign up for project email updates

## Who is involved?

The plan update will be completed in partnership with:

- North Dakota Department of Transportation
■ Minnesota Department of Transportation
- City of Grand Forks
- City of East Grand Forks
- Grand Forks County
- Polk County
- Federal Highway Administration
- Federal Transit Administration
- Residents and other stakeholders

# Grand Forks - East Grand Forks Metropolitan Planning Organization 

## 1969 Plan

$3^{\text {nd }}$ Ave S. Likely receive more serious consideration in future years; not officially a recommended project
 tomp Rasp Trasportabon hion Dpdath

## 1979 Plan

At $24^{\text {th }}$ Ave $S$ or $3^{\text {nd }}$ Ave $S$ with the official traffic forecast utilizing the $24^{\text {th }}$ Ave $S$ location as the future street network

## 1992 Plan

N. Bypass Bridge at $27^{\text {th }}$ Ave N and continue study of feasibility and need for a local bridge beginning at $17^{\text {th }}$ Ave $S$ and southward.

## 1999/2000 Plan

No new bridges but continue seeking two new bridges with focus on either $17^{\text {th }}$ Ave $S$ or $32^{\text {nd }}$ Ave $\mathbf{S}$ for local traffic and Merrifield Rd. for "bypass" traffic.

## 2004 Plan

$3^{2{ }^{\text {nd }}}$ Ave S location for local traffic and Merrifield Rd for "bypass" traffic constructed within Plan horizon

## 2007 Plan

$3^{2}{ }^{\text {nd }}$ Ave $S$ for local traffic and Merrifield Rd for "bypass" traffic but not within fiscally constrained plan so construction not within Plan horizon

## 2013 Plan

$3^{\text {nd }}$ Ave $\mathbf{S}$ for local traffic and Merrifield Rd for
"bypass" traffic but not within fiscally
constrained plan so construction not within Plan horizon

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE

COMMENT CARD

OPTIONAL

COMMENT Keep performance measures to an absolute minimum. I doit want to see a waste of tax pryer dalliers on unfunded mandates or going above and bepand to waste money measuring things that dort need ta be measured

# Street/Highway Plan Update Open House 

August 30, 2017

Earl Haugen, MPO Executive Director Brandon Bourdon, Kimley-Horn

## Agenda

- Plan Overview
- Background
- Purpose
- Organizational Chart
- Plan Outcomes
- Open House Overview
- Plan Engagement
- Ways to Stay Involved
- Wrap-Up
- Next Steps
- Questions

[^10]

## Plan Overview: Purpose

- Update street/highway element of the 2040 plan
- Communicate local investment needs and priorities
- Address federal regulations in the FAST Act
- Required to update every five years

## Plan Overview: Organizational Chart

## Plan Outcomes

1. Update or establish vision, goals, objectives, performance measures and performance targets
2. Understand existing conditions and issues
3. Identify and evaluate planned projects and potential alternatives

- Apply updated performance measures and targets

4. Establish financial plan
5. Identify future network recommendations
6. Establish implementation priorities
[^11]
## Open House Overview: Performance Measures, Metrics and Targets

| Element | Description |
| :--- | :--- |
| Performance Measure | An expression of a trend or desired trend that <br> is used to establish a metric and target. |
| Performance Metric | The specific dataset or information used to <br> track a given performance measure. |
| Performance Target | Maximum and minimum thresholds for <br> success and/or failure. |

## Open House Overview: <br> Existing Conditions

- National Highway System (NHS) and other federal-aid roads
- Functional classification
- Intersection level of service
- Crash rates
- Pavement condition
- BNSF trackage
- Truck traffic volumes
- General traffic volumes

## Open House Overview: <br> Key Projects in MPO 2017-2020 <br> Transportation Improvement Program (TIP)

$\underline{2017} \underline{\underline{2018}}$

- Kennedy Bridge Rehabilitation
- 42nd St Reconstruction
- South Columbia Road 2 to 5 Lane Expansion and New Signal
(University to US2)
- South Columbia Road Turn Lanes at 17th Avenue South
- Central Avenue Multi-Use Trail
- Rhinehart St Reconstruction
- EGF Point Bridge Mill \& Overlay
$\underline{2019}$
- 32nd Avenue Corridor Safety Improvements
$\underline{2020}$

Demers Avenue (Columbia

- Gateway Drive/55th Street Traffic Rd/30th St.) Traffic Signal/Turn Signal/Turn Lanes
- University Avenue Mill \& Overlay Lanes
- Downtown GF Demers Avenue Reconstruction/Mill \& Overlay

## Open House Overview:

Key Projects in MPO 2021 TIP
Under Consideration
Minnesota

- US 2 and US Bus 2 Intersection Improvements
- Funds are programmed, final project scope being set

## North Dakota

- Washington St Underpass Reconstruction
- N. Columbia Rd Reconstruction (2nd St thru University Ave)

[^12]
## Plan Public Engagement

## Plan Public Engagement: Ways To Stay Involved

- Public meetings
- Attend the open houses - there will be four
- Online
- Project website - get interactive with online mapping
- Facebook page - help us spread the word
- Stay in touch
- Provide your contact information to stay informed
- Provide feedback on comment forms
- Got other ideas? Tell us what works for you

[^13]
## Plan Public Engagement:

## Interactive Map - Paper and Online

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN LPPDATE

## Wrap Up: Next Steps

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN LPDATE

## Wrap Up: Questions

Earl Haugen, MPO Executive Director
(218) 399-3370
(701) 746-2660

Earl.Haugen@theforksmpo.org
www.theforsksstreets2045.org

# PUBLIC INPUT MEETING <br> <br> WHY? 

 <br> <br> WHY?}

To discuss the updating of the Street and High element of the Transportation Plan. The purpos this first meeting is to inform the public on progress, to give existing conditions and to ga initial public thoughts on important issues address.

When?
December 14th, 2017
5:00 PM to 7:00 PM

Where?
Rotunda
EGF City Hall
600 DeMers Ave
East Grand Forks, MN

## OPEN HOUSE CONDUCTED BY

Grand Forks - East Grand Forks
Metropolitan Planning Organization

Representatives from the Grand Forks/ East Grand Forks Metropolitan Planning Organization (GF-EGF MPO) and Kimley-Horn/WSB Consulting Team will be on hand to answer your questions and discuss your concerns. Additional information available at www.theforksmpo.org

WRITTEN STATEMENTS or comments about this project must be mailed by December 31st, to Earl Haugen, GF-EGF MPO, PO Box 5200, Grand Forks, ND 58206
Email: info@theforksmpo.org
Note "Street and Highway" in email subject heading.
The GF-EGF MPO will consider every request for reasonable accommodation to provide:

- an accessible meeting facility or other accommodation for people with disabilities,
- language interpretation for people with limited English proficiency (LEP), and
- translations of written material necessary to access GF-EGF MPO programs and information.

Appropriate provisions will be considered when the MPO is notified at least 5 days prior to the meeting date or the date the written material translation is needed.

To request accommodations, contact Earl Haugen, at 701-746-2660 or earl.haugen@theforksmpo.org.

## Public Meeting \#2 Summary

## Time and Location

Thursday, December 14, 2017
5:00-7:00 p.m.
East Grand Forks City Hall
600 Demers Ave
East Grand Forks, MN 56721

## Purpose of Meeting

The purpose of the second round of public engagement was to discuss the existing plus future transportation network and the transportation issues that have been identified so far. Additionally, the meeting was meant to explore the concept of a financially constrained transportation plan; this discussion was aided by an interactive financial planning activity, which collected input on attendees' public investment preferences. Finally, more detailed information on goals, objectives, and performance measures for the Street and Highway Plan Update were presented.

## Materials

Display boards were available that provided information on the LRTP and Street and Highway Plan Update, the draft universe of alternatives, existing traffic volumes, forecast traffic volumes, planned land use, issues identified through the last public meeting and interactive mapping activity, the 2045 LRTP vision statement and draft goals, performance-based planning, financial plans, and the project schedule.

For the financial planning activity, each attendee was given ten stickers and a worksheet. Participants were asked to place the stickers, representing public funds, on their worksheets to indicate their investment priorities. On online version of this activity was also available on the project website.

## Participants

Seven attendees signed in on the meeting sign-in sheets. Of these seven, five completed the NDDOT Title VI Public Participation Survey. The results of this survey are summarized below.

- Sex
- Number of respondents: 5
- Male: 5 (100\%)
- Disability
- Number of respondents: 5
- Yes: 1 (20\%)
- No: 4 (80\%)
- Age
- Number of respondents: 5
- 34 and younger: 1 (20\%)
- 35-54: 3 (60\%)
- 55 and older: 1 (20\%)
- Race
- Number of respondents: 5
- White: 5 (100\%)
- Language most frequently spoken in your home
- Number of respondents: 5
- English: 5 (100\%)
- Do you receive public assistance?
- Number of respondents: 5
- No: 4 (80\%)
- Yes: 1 (20\%)
- Indicate how you heard about the event (note that some respondents checked more than one box)
- Number of respondents: 5
- Internet: 2 (40\%)
- Newspaper: 1 (20\%)
- Other: 2 (40\%)

## Input Received

## Comment Forms

Three written comments were received. One comment asked that all railroad tracks south of Gateway Drive, Grand Forks, be removed, and that new tracks be laid north of Grand Forks and East Grand Forks. Another comment expressed that a new bridge and street improvements should be a first priority for public funding. A third comment expressed the desire for more bicycle and pedestrian infrastructure. This comment explained that east and west flowing bike traffic is very difficult and dangerous, and asked that bike facilities on University Avenue be improved.

## Financial Planning Activity

The financial planning activity was conducted both in-person and online. When the activity closed on January 15, 2018, input from 69 different interactions had been collected.
For the in-person activity, each attendee was given ten stickers and a worksheet showing public investment categories. Respondents were asked to place stickers, each representing ten dollars, on their worksheets to indicate their public investment priorities. With the online activity, each investment category had a slider that participants could adjust to indicate their investment priorities by setting the slider at a value between $\$ 0$ and $\$ 100$ in $\$ 10$ increments. Input from the in-person and online interactions has been compiled in the following summary.

## Responses

In the financial planning activity, participants were instructed to allocate $\$ 100$ of funding across six public investment categories. There were 69 total in-person and online participant interactions. The final funds distribution is summarized below:

Table 1: Distribution of Funds by Public Investment Category

|  | Funding Received | Percent of Total Funding |
| :--- | ---: | ---: |
| Maintain and rebuild existing infrastructure | $\$ 2,080$ | $30 \%$ |
| Safety improvements | $\$ 620$ | $9 \%$ |
| Improve traffic signals and technology | $\$ 550$ | $8 \%$ |
| New freeway interchanges | $\$ 1,100$ | $16 \%$ |
| New river crossings | $\$ 1,970$ | $29 \%$ |
| Add additional lanes or new roads | $\$ 530$ | $8 \%$ |
| Total | $\$ 6,850$ | $100 \%$ |

The number of allocations for each investment category, for each funding level, is displayed in Figures 1 through 6 below. The preferences expressed through this exercise will be analyzed to inform the financial plan.

Figure 1: Number of Allocations for "Maintain and Rebuild Existing Infrastructure"

Figure 2: Number of Allocations for "Safety Improvements"

Figure 3: Number of Allocations for "Improve Traffic Signals and Technology"

Figure 4: Number of Allocations for "New Freeway Interchanges"

Figure 5: Number of Allocations for "New River Crossings"

Figure 6: Number of Allocations for "Add Additional Lanes or New Roads"

## Next Steps

Public Meeting \#3 is anticipated to occur in April 2018. This public meeting will present a range of alternatives to address identified transportation issues and a preliminary evaluation of how these alternatives compare to each other and address identified goals, objectives, and performance measures. Tradeoffs between the various implementation packages will be discussed.

Grand Forks-East Grand Forks MPO
STREET/HIGHWAY PLAN UPDATE

# Welcome Public Meeting 

## Grand Forks-East Grand Forks Metropolitan Planning Organization

|  | Grand Forks - East Grand Forks Metropolitan Planning Organization |
| :---: | :---: |

## Overview

## What is a Long-Range Transportation Plan (LRTP)?

- Sets a direction and strategies to help shape a region's transportation network
- Includes three elements:

?Streets and highways

## Transit

Pedestrians and bicycles

- The MPO is required to update its LRTP every 5 years - the last update for Grand Forks-East Grand Forks was completed in 2013

## ? What's an MPO?

Federal law requires that all urbanized areas in the US with populations over 50,000 people establish Metropolitan Planning Organizations (MPO) responsible for area transportation planning and programming services.

## $\downarrow$ <br> What is the Street and Highway Plan Update?

- This part of the LRTP will develop a performance-based investment decision framework for the streets and highways in the MPO area that is consistent with requirements of the FAST Act

## Who is I nvolved?

- North Dakota Department of Transportation
- Minnesota Department of Transportation
- City of Grand Forks
- City of East Grand Forks
- Grand Forks County
- Polk County
- Federal Highway Administration

- Federal Transit Administration
- Residents and regional stakeholders

## YOUR INPUT IS I MPORTANT TO US!

## Draft Universe of Alternatives

## Existing Conditions

## 2045 Conditions

## 2045 Land Use Plan <br> Grand Forks

The 2045 Grand Forks Future Land Use Plan focuses on more compact development and uses a three-tier system for managing timing and sequencing of growth:

- TIER 1 - includes existing city limits and is the area where all projected growth within the 2045 planning horizon will be accommodated
- TIER 2 - Urban Reserve Area that only allows residential development on existing platted lots and only if no other Tier 1 land is available
- TIER 3 - agricultural preservation area

## 2045 Land Use Plan

East Grand Forks

The East Grand Forks 2045 Land Use Plan:

- Promotes compact, infill development and responsible greenfield development
- Utilizes the existing flood protection system as an interim growth boundary, with phased land available to accommodate anticipated growth within the 2045 planning horizon

## Forecast Average Daily Traffic

2030

2045

## Forecast Volume to Capacity Ratios

2030

2045

## Issues Identified

Your Input

BRIDGE DEMERS
ROAD north $\begin{aligned} & \text { left-han } \\ & \text { signal }\end{aligned}$
reduce
ROUGH
Bygland intersection left turn

Input received on bicycle and pedestrian issues will be reflected in the Bicycle/Pedestrian Plan Update and is not shown here

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE

## 2045 LRTP Vision Statement and Draft Goals

Vision Statement: The Grand Forks-East Grand Forks Long Range
Transportation Plan (LRTP) envisions a community that provides a variety of complementary transportation choices for people and goods that is fiscally constrained.

|  | GOAL | DESCRIPTION |
| :---: | :---: | :---: |
| 1 | Economic Vitality | Support the economic vitality through enhancing the economic competitiveness of the metropolitan area by giving people access to jobs and education services as well as giving business access to markets |
| 2 | Security | Increase the security of the transportation system for motorized and non-motorized uses |
| 3 | Accessibility and Mobility | Increase the accessibility and mobility options for people and freight by providing more transportation choices |
| 4 | Environmental/ Energy/ Quality of Life | Protect and enhance the environment, promote energy conservation, and improve quality of life by valuing the unique qualities of all communities - whether urban, suburban, or rural |
| 5 | Integration and Connectivity | Enhance the integration and connectivity of the transportation system across and between modes for people, freight, and housing, particularly affordable housing located close to transit |
| 6 | Efficient <br> System <br> Management | Promote efficient system management and operation by increasing collaboration among federal, state, and local government to better target investments and improve accountability |
| 7 | System Preservation | Emphasize the preservation of the existing transportation system by first targeting federal funds towards existing infrastructure to spur revitalization, promote urban landscapes, and protect rural landscapes |
| 8 | Safety | Increase safety of the transportation system for motorized and non-motorized uses. |
| 9 | Resiliency* | Improve resiliency and reliability of the transportation system and reduce or mitigate storm water impacts of surface transportation |
| 10 | Tourism* | Enhance travel and tourism |

[^14]
## Performance-Based Planning: Delivering Results

This update of the long-range transportation plan is refining each goal area's objectives, standards, and performance measures. We are also adding performance targets for some goal areas to measure our region's progress toward delivering the transportation system we want.

## WHAT ARE THE ELEMENTS OF A PERFORMANCE-BASED PLAN?

- Goal and Goal Statement: Desired 'big picture' future outcome for the metropolitan transportation system, broad statement of aspiration
- Objective: Specific outcome desired within a goal area, achievable by 2045 (plan timeframe)
- Standard: Specific technique for achieving an objective; identifies HOW objective will be met
- Performance Measure: Things that can be measured to evaluate if a standard is working
- Performance Target: Data point that defines success for a performance measure

## What should we add or refine?

|  | Goal Statement | Increase safety of the transportation system for motorized and non-motorized uses. |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Objectives | See Handout |  |  |  |  |  |
|  | Standards | See Handout |  |  |  |  |  |
|  | Performance Measures | Number of traffic fatalities | Number of fatalities per 100 million vehicle miles traveled | Number of crash related serious injuries | Number of serious injuries per 100 million vehicle miles traveled | Number of nonmotorized fatalities and non-motorized serious injuries | Others? <br> - Number of unrestrained passenger vehicle occupant Number of fatalities involving a driver or motorcycle operator with a 0.08 BAC or above <br> - Number of speed-related fatalities <br> - Number of fatalities involving a motorcycle operator <br> - Number of unhelmeted motorcycle fatalities <br> - Number of drivers age 20 and younger involved in fatal crashes <br> - Number of pedestrian fatalities <br> - Number of bicyclist fatalities |
|  | Performance <br> Targets <br> Note: the MPO can adopt the state or a category | DRAFT Local Target <br> - 3 or fewer traffic fatal <br> STATE TARGETS <br> - 138 traffic fatalities or fewer statewide <br> MINNESOTA - 375 traffic fatalities or fewer statewide - $3 \%$ decline in trend <br> - $3 \%$ decline in tren | DRAFT Local Target - No change in trend STATE TARGETS NORTH DAKOTA ■ $1.336 / \mathrm{mvmt}$ $\qquad$ - $0.62 / \mathrm{mvmt}$ - No change in trend | DRAFT Local Target - 18 or fewer serious injuries by 2018 - Decline in trend <br> STATE TARGETS <br> - 516 serious injuries or fewer statewide $\qquad$ <br> - 1,935 | DRAFT Local Target - Decline int trend <br> STATE TARGETS <br> - 5.088/mvmt <br> - $3.15 / \mathrm{mvmt}$ | DRAFT Local Target <br> and serious injury <br> - Crashes by 2018 <br> STATE TARGETS $\qquad$ <br> - No change in trend MINNESOTA <br> - 348 fatalities and serious injuries or fewer statewi |  |

[^15]
## What Is Our Financial Plan?

A financial plan aligns revenues with eligible projects.

## WHAT ARE OUR INVESTMENT PRIORITIES?

Help us update the investment priorities that will inform the financial plan.

|  | FEDERAL |
| :--- | :--- | :--- |
| Highway Safety Improvement Program (HSIP) |  |

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE

## Traffic Forecasting

- Review transportation impacts of 5 river crossing locations
- Improve local traffic and connectivity
. Use 2045 travel demand model
. Review impacts on:
- Existing crossings
- Neighborhoods
- Local and regional roadway network
- Compare impacts of each crossing
- Reduce number of alternatives to analyze further

$\square$ Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE

# Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE 

## What is the purpose of the street/ highway plan update?

The purpose of this project is to update the street and lighway element of the Grand Forks-East Grand Forks Metropolitan Planning Organization's (MPO) Long-Range Transportation Plan (LRTP). The MPO is required to update its LRTP every five years, and the last update for Grand Forks-East Grand Forks was in 2013.

LRTPs include three elements:

Streets and highways

Transit

Pedestrians and bicycles

This update will communicate local investment needs and priorities for streets and highways in the MPO area and address the federal regulations in the Fixing America's Surface Transportation (FAST) Act. The transit and pedestrian/bicycle elements are being addressed separately.

## How can I engage with the plan update?

There will be multiple opportunities to learn about the project and provide input regarding the street and highway system in the MPO area, both in person and online. We'd love to hear from you!
» Come talk to us at the public meetings
» Provide your input through interactive activities on the project website
» Check out the project website to see project reports and other materials and provide your comments
" Sign up for project email updates

## Who is involved?

The plan update will be completed in partnership with:

- North Dakota Department of Transportation
- Minnesota Department of Transportation
- City of Grand Forks
- City of East Grand Forks
- Grand Forks County
- Polk County
- Federal Highway Administration
- Federal Transit Administration
- Residents and other stakeholders

COMMENT I wall like mare bike + pedestrian
infrastructure. East a West flowing bike traffic is very difficult t dangerous.
Enhrabeet Enhance the bike lane on University; currently it is faded and not respected bay cars. Solid painted lane markers would be. very nice and greatly increase the safety a usability of this bike lane

# PUBLIC INPUT MEETING <br> <br> WHY? 

 <br> <br> WHY?}

Come learn about the range of alternatives, how they'll be evaluated, and the public input we received on funding priorities. We'll also share analysis of different river crossing options.

## When?

April 18, 2018
5:30 PM to 7:00 PM
Presentation at 6:00 PM

## Where?

Sterling Room
Choice Health and Fitness
4401 S. $11^{\text {th }}$ St.
Grand Forks, ND

## OPEN HOUSE CONDUCTED BY

## O O Grand Forks - East Grand Forks Metropolitan Planning Organization

Representatives from the Grand Forks/ East Grand Forks Metropolitan Planning Organization (GF-EGF MPO) and Kimley-Horn/WSB Consulting Team will be on hand to answer your questions and discuss your concerns. Additional information available at www.theforksmpo.org

WRITTEN STATEMENTS or comments about this project must be mailed by April 30th, to Earl Haugen, GF-EGF MPO, PO Box 5200, Grand Forks, ND 58206
Email: info@theforksmpo.org
Note "Street and Highway" in email subject heading.
The GF-EGF MPO will consider every request for reasonable accommodation to provide:

- an accessible meeting facility or other accommodation for people with disabilities,
- language interpretation for people with limited English proficiency (LEP), and
- translations of written material necessary to access GF-EGF MPO programs and information.

Appropriate provisions will be considered when the MPO is notified at least 5 days prior to the meeting date or the date the written material translation is needed.

To request accommodations, contact Earl Haugen, at 701-746-2660 or earl.haugen@theforksmpo.org.

# Public Meeting \#3 Summary 

## Time and Location

Wednesday, April 18, 2018
5:30-7:00 p.m.

Choice Health \& Fitness
Sterling Meeting Room
4401 South $11^{\text {th }}$ Street
Grand Forks, ND 58201

## Purpose of Meeting

The purpose of the third public meeting was to present the range of alternatives, discuss how the alternatives will be evaluated, and share the public input received on funding priorities.

## Materials

Display boards were available that provided information on the LRTP and Street and Highway Plan Update, the project schedule, forecast average daily traffic, forecast volume to capacity ratios, issues identified through the first public meeting and interactive mapping activity, the 2045 LRTP vision statement and draft goals, performance-based planning, the financial plan, input received from the second public meeting and an interactive activity on funding priorities, the range of alternatives, the alternatives evaluation framework, and the river crossing analysis. This information was also presented through a formal presentation during the public meeting.

## Participants

Fourteen attendees signed in on the meeting sign-in sheets, and nine attendees completed the NDDOT Title VI Public Participation Survey. The results of this survey are summarized below.

- Sex
- Number of respondents: 9
- Male: 8 (89\%)
- Female: 1 (11\%)
- Disability
- Number of respondents: 7
- Yes: 1 (14\%)
- No: 6 (86\%)
- Age
- Number of respondents: 7
- 34 and younger: 1 (14\%)
- 35-54: 2 (29\%)
- 55 and older: 4 (57\%)
- Race
- Number of respondents: 9
- White: 9 (100\%)
- Language most frequently spoken in your home
- Number of respondents: 7
- English: 7 (100\%)
- Do you receive public assistance?
- Number of respondents: 9
- No: 9 (100\%)
- Indicate how you heard about the event (note that some respondents checked more than one box)
- Number of respondents: 7
- Internet: 5 (71\%)
- Radio: 2 (29\%)
- Advocacy Group: 1 (14\%)
- Mailing: 2 (29\%)
- NDDOT Contact: 1 (14\%)
- Newspaper: 2 (29\%)

## Input Received

No written comment forms were submitted at the public meeting.

## Next Steps

Public Meeting \#4 is anticipated to occur in summer 2018. This public meeting will present the evaluation of how the range of alternatives compare to each other and address identified goals, objectives, and performance measures. Tradeoffs between the various implementation packages will be discussed. As this will be the final public meeting, the proposed final implementation package of projects that are prioritized, financially constrained, and based on the goals, objectives, performance measures, and performance targets will be presented.

# Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE 

## What is the purpose of the street/ highway plan update?

The purpose of this project is to update the street and lighway element of the Grand Forks-East Grand Forks Metropolitan Planning Organization's (MPO) Long-Range Transportation Plan (LRTP). The MPO is required to update its LRTP every five years, and the last update for Grand Forks-East Grand Forks was in 2013.

LRTPs include three elements:

Streets and highways

Transit

Pedestrians and bicycles

This update will communicate local investment needs and priorities for streets and highways in the MPO area and address the federal regulations in the Fixing America's Surface Transportation (FAST) Act. The transit and pedestrian/bicycle elements are being addressed separately.

## Overview

## What is a Long-Range Transportation Plan (LRTP)?

- Sets a direction and strategies to help shape a region's transportation network
- Includes three elements:

?Streets and highways

## Transit

Pedestrians and bicycles

- The MPO is required to update its LRTP every 5 years - the last update for Grand Forks-East Grand Forks was completed in 2013

## ? What's an MPO?

Federal law requires that all urbanized areas in the US with populations over 50,000 people establish Metropolitan Planning Organizations (MPO) responsible for area transportation planning and programming services.

## $\downarrow$ <br> What is the Street and Highway Plan Update?

- This part of the LRTP will develop a performance-based investment decision framework for the streets and highways in the MPO area that is consistent with requirements of the FAST Act

## Who is I nvolved?

- North Dakota Department of Transportation
- Minnesota Department of Transportation
- City of Grand Forks
- City of East Grand Forks
- Grand Forks County
- Polk County
- Federal Highway Administration

- Federal Transit Administration
- Residents and regional stakeholders

## 2045 LRTP Vision Statement and Draft Goals

Vision Statement: The Grand Forks-East Grand Forks Long Range
Transportation Plan (LRTP) envisions a community that provides a variety of complementary transportation choices for people and goods that is fiscally constrained.

|  | GOAL | DESCRIPTION |
| :---: | :---: | :---: |
| 1 | Economic Vitality | Support the economic vitality through enhancing the economic competitiveness of the metropolitan area by giving people access to jobs and education services as well as giving business access to markets |
| 2 | Security | Increase the security of the transportation system for motorized and non-motorized uses |
| 3 | Accessibility and Mobility | Increase the accessibility and mobility options for people and freight by providing more transportation choices |
| 4 | Environmental/ Energy/ Quality of Life | Protect and enhance the environment, promote energy conservation, and improve quality of life by valuing the unique qualities of all communities - whether urban, suburban, or rural |
| 5 | Integration and Connectivity | Enhance the integration and connectivity of the transportation system across and between modes for people, freight, and housing, particularly affordable housing located close to transit |
| 6 | Efficient <br> System <br> Management | Promote efficient system management and operation by increasing collaboration among federal, state, and local government to better target investments and improve accountability |
| 7 | System Preservation | Emphasize the preservation of the existing transportation system by first targeting federal funds towards existing infrastructure to spur revitalization, promote urban landscapes, and protect rural landscapes |
| 8 | Safety | Increase safety of the transportation system for motorized and non-motorized uses. |
| 9 | Resiliency* | Improve resiliency and reliability of the transportation system and reduce or mitigate storm water impacts of surface transportation |
| 10 | Tourism* | Enhance travel and tourism |

[^16]
## Performance-Based Planning: Delivering Results

This update of the long-range transportation plan is refining each goal area's objectives, standards, and performance measures.
We are also adding performance targets for some goal areas to measure our region's progress toward delivering the transportation system we want.

## WHAT ARE THE ELEMENTS OF A PERFORMANCE-BASED PLAN?

- Goal and Goal Statement: Desired 'big picture' future outcome for the metropolitan transportation system, broad statement of aspiration
- Objective: Specific outcome desired within a goal area, achievable by 2045 (plan timeframe)
- Standard: Specific technique for achieving an objective; identifies HOW objective will be met
- Performance Measure: Things that can be measured to evaluate if a standard is working
- Performance Target: Data point that defines success for a performance measure

## NOIF

The safety performance measures and targets were adopted at the February 21, 2018 MPO meeting. These targets will be reviewed and adopted annually by the MPO.

## What Is Our Financial Plan?

A financial plan aligns revenues with eligible projects.

## WHAT ARE OUR INVESTMENT PRIORITIES?

Help us update the investment priorities that will inform the financial plan.

# Street/Highway Plan Update Public Meeting 

April 18, 2018

Earl Haugen, MPO Executive Director
Brandon Bourdon, Kimley-Horn
Scott Marek, WSB

## Agenda

- Plan overview
- Plan update schedule
- Universe of projects
- River crossing analysis
- Questions

## Plan Overview: Purpose

- Update street/highway element of the 2040 plan
- Communicate local investment needs and priorities
- Address federal regulations in the FAST Act
- Required to update every five years

## Plan Outcomes

1. Update or establish vision, goals, objectives, performance measures and performance targets
2. Understand existing conditions and issues
3. Identify and evaluate planned projects and potential alternatives

- Apply updated performance measures and targets

4. Establish financial plan
5. Identify future network recommendations
6. Establish implementation priorities

## Plan Update Schedule: Where We Are

[^18]
## Issues Identified

## Universe of Projects: Next Steps

- Finalize state of good repair and multimodal/main street projects
- Consider 2045 "No-Build" network needs
- Consider performance measures and targets
- Establish investment priorities and levels for constrained plan
- State of good repair projects
- Safety/operations projects
- Multimodal/main street projects
- Capacity expansion projects
" Run financially constrained 2030/2045 "Build Alternative"
- i.e., Constrained capacity expansion projects
- Finalize discretionary/illustrative projects beyond financial constraint

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN LPPDATE

Previous Plans and Added River Crossings
Nearing 50 years of considering the need for additional bridges over the Red River. The focus has been generally for the need for a southern location.

Spent 1998/2004 trying to reach agreement in conjunction with flood protection project planning. Went through mediator to conclude 2 bridges: Merrifield for "bypass" and $32{ }^{\text {nd }}$ Ave for local.

[^19]
## River Crossing Analysis: Scope of Work

- Review transportation impacts of 4 river crossing locations
- Improve local traffic and connectivity
- Use 2045 travel demand model
- Review impacts on:
- Existing crossings
- Neighborhoods
- Local and regional roadway network
- Compare impacts of each crossing

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN LPDDATE

## Example of Other Documents

Each City has adopted the exact same Plan as the MPO: 2004, 2007 and 2013.

The Greenway Plan shows possible future bridges over the Red River. This curtails issues under NEPA.

## River Crossing Modeling Assumptions

- All proposed river crossing bridges are two-lane bridges
- All connections on each side are to two-lane roads
- No additional thru lane capacity was added
- No new connections were made to I-29 to the west
- No new connections were made to US 2 to the east

TYPICAL BRIDGE SECTION

## Local Traffic Impact

## Wrap Up: Next Steps

[^24]
## Wrap Up: Questions

Earl Haugen, MPO Executive Director
(218) 399-3370
(701) 746-2660

Earl.Haugen@theforksmpo.org
www.theforsksstreets2045.org

## PUBLIC INPUT MEETING

## WHY?

Come learn and let us know what you think! We'll present information about available street/highway funding. Based upon these levels of funding we'll share the street/highway projects that match the available funding and focus on preserving pavements for the movement of people and freight on our national and state roads. We'll also share results from analysis of the new river crossing options.

## When?

September 12, 2018
5:30 PM to 7:00 PM
Presentation at 5:45 PM

## Where?

Room \#12
Alerus Center
1200 S. $42^{\text {nd }}$ St.
Grand Forks, ND

## OPEN HOUSE CONDUCTED BY

## Grand Forks - East Grand Forks Metropolitan Planning Organization

Representatives from the Grand Forks/ East Grand Forks Metropolitan Planning Organization (GF-EGF MPO) and Kimley-Horn/WSB Consulting Team will be on hand to answer your questions and discuss your concerns. Additional information available at www.theforksmpo.org

WRITTEN STATEMENTS or comments about this project must be mailed by September 28th, to Earl Haugen, GF-EGF MPO, PO Box 5200, Grand Forks, ND 58206
Email: info@theforksmpo.org
Note "Street and Highway" in email subject heading.
The GF-EGF MPO will consider every request for reasonable accommodation to provide:

- an accessible meeting facility or other accommodation for people with disabilities,
- language interpretation for people with limited English proficiency (LEP), and
- translations of written material necessary to access GF-EGF MPO programs and information.

Appropriate provisions will be considered when the MPO is notified at least 5 days prior to the meeting date or the date the written material translation is needed.

To request accommodations, contact Earl Haugen, at 701-746-2660 or earl.haugen@theforksmpo.org.

## Public Meeting \#4 Summary

## Time and Location

Wednesday, September 12, 2018
5:30-7:00 p.m.

Alerus Center, Room 12
1200 S 42 ${ }^{\text {nd }}$ Street
Grand Forks, ND 58201

## Purpose of Meeting

The purpose of the fourth public meeting was to present information about available street/highway funding and share the street/highway projects that match the funding available. Results from the analysis of new river crossing options were also shared.

## Materials

Display boards were available that provided information on the LRTP and Street and Highway Plan Update; the project schedule; the 2045 LRTP vision statement, goals, and performance measures and targets; performance goals, measures, and targets for safety, system preservation, and accessibility and mobility; the financial plan; input issues areas and investment priorities; the alternatives evaluation framework; the proposed investment scenario; and potential discretionary projects. Display boards were also available on the river crossing analysis, including information on the scope of work, traffic analysis, and benefit-cost analysis. This information was also presented through a formal presentation during the public meeting.

## Participants

Eighteen attendees signed in on the meeting sign-in sheets, and nine attendees completed the NDDOT Title VI Public Participation Survey. The results of this survey are summarized below.

- Sex
- Number of respondents: 9
- Male: 6 (67\%)
- Female: 3 (33\%)
- Disability
- Number of respondents: 8
- Yes: 2 (25\%)
- No: 6 (75\%)
- Age
- Number of respondents: 9
- 34 and younger: 5 (56\%)
- 35-54: 1 (11\%)
- 55 and older: 3 (33\%)
- Race
- Number of respondents: 9
- White: 9 (100\%)
- Language most frequently spoken in your home
- Number of respondents: 9
- English: 9 (100\%)
- Do you receive public assistance?
- Number of respondents: 8
- No: 8 (100\%)
- Indicate how you heard about the event (note that some respondents checked more than one box)
- Number of respondents: 7
- Internet: 2 (29\%)
- Radio: 0 (0\%)
- Advocacy Group: 1 (14\%)
- Mailing: 2 (29\%)
- NDDOT Contact: 1 (14\%)
- Newspaper: 2 (29\%)

## Input Received

One written comment was received. It noted the commenter's opposition to the $24^{\text {th }}$ Avenue $S$ river crossing option due to the impact to the historical society's grounds and recommended pursuing a crossing further south.

## Next Steps

The final draft plan will be presented to the Grand Forks and East Grand Forks city councils in October 2018 for approval and any final direction on plan content. After receiving approval for the city councils, the MPO will finalize the Street/Highway Plan Update and post it on the project website.

Grand Forks-East Grand Forks MPO
STREET/HIGHWAY PLAN UPDATE

# Welcome Public Meeting 

## Grand Forks-East Grand Forks Metropolitan Planning Organization

|  | Grand Forks - East Grand Forks Metropolitan Planning Organization |
| :---: | :---: |

## Overview

## What is a Long-Range Transportation Plan (LRTP)?

- Sets a direction and strategies to help shape a region's transportation network
- Includes three elements:

?Streets and highways

## Transit

Pedestrians and bicycles

- The MPO is required to update its LRTP every 5 years - the last update for Grand Forks-East Grand Forks was completed in 2013

## ? What's an MPO?

Federal law requires that all urbanized areas in the US with populations over 50,000 people establish Metropolitan Planning Organizations (MPO) responsible for area transportation planning and programming services.

## $\downarrow$ <br> What is the Street and Highway Plan Update?

- This part of the LRTP will develop a performance-based investment decision framework for the streets and highways in the MPO area that is consistent with requirements of the FAST Act

## Who is I nvolved?

- North Dakota Department of Transportation
- Minnesota Department of Transportation
- City of Grand Forks
- City of East Grand Forks
- Grand Forks County
- Polk County
- Federal Highway Administration

- Federal Transit Administration
- Residents and regional stakeholders

$\square$ Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE

## 2045 LRTP Vision Statement, Goals, and Status of Performance Measure sand Targets

Vision Statement: The Grand Forks-East Grand Forks Long Range
Transportation Plan (LRTP) envisions a community that provides a variety of complementary transportation choices for people and goods that is fiscally constrained.

|  | GOAL | DESCRIPTION | STATUS OF PERFORMANCE MEASURESAND TARGEIS |
| :---: | :---: | :---: | :---: |
| 1 | Economic Vitality | Support the economic vitality through enhancing the economic competitiveness of the metropolitan area by giving people access to jobs and education services as well as giving business access to markets | No change from 2040 plan |
| 2 | Security | Increase the security of the transportation system for motorized and non-motorized uses | No change from 2040 plan |
| 3 | Accessibility and Mobility | Increase the accessibility and mobility options for people and freight by providing more transportation choices | See board |
| 4 | Environmental/ Energy/ Quality of Life | Protect and enhance the environment, promote energy conservation, and improve quality of life by valuing the unique qualities of all communities - whether urban, suburban, or rural | No change from 2040 plan |
| 5 | Integration and Connectivity | Enhance the integration and connectivity of the transportation system across and between modes for people, freight, and housing, particularly affordable housing located close to transit | No change from 2040 plan |
| 6 | Efficient System Management | Promote efficient system management and operation by increasing collaboration among federal, state, and local government to better target investments and improve accountability | No change from 2040 plan |
| 7 | System Preservation | Emphasize the preservation of the existing transportation system by first targeting federal funds towards existing infrastructure to spur revitalization, promote urban landscapes, and protect rural landscapes | See board |
| 8 | Safety | Increase safety of the transportation system for motorized and non-motorized uses. | See board |
| 9 | Resiliency* | Improve resiliency and reliability of the transportation system and reduce or mitigate storm water impacts of surface transportation | No proposed measures and targets |
| 10 | Tourism* | Enhance travel and tourism | No proposed measures and targets |

[^25]
## Performance-Based Planning: Delivering Results

This update of the long-range transportation plan is refining each goal area's objectives, standards, and performance measures.
We are also adding performance targets for some goal areas to measure our region's progress toward delivering the transportation system we want.

## WHAT ARE THE ELEMENTS OF A PERFORMANCE-BASED PLAN?

- Goal and Goal Statement: Desired 'big picture' future outcome for the metropolitan transportation system, broad statement of aspiration
- Objective: Specific outcome desired within a goal area, achievable by 2045 (plan timeframe)
- Standard: Specific technique for achieving an objective; identifies HOW objective will be met
- Performance Measure: Things that can be measured to evaluate if a standard is working
- Performance Target: Data point that defines success for a performance measure

## NOIF

The safety performance measures and targets were adopted at the February 21, 2018 MPO meeting. These targets will be reviewed and adopted annually by the MPO.

## Performance-Based Planning: Delivering Results

This update of the long-range transportation plan is refining each goal area's objectives, standards, and performance measures.
We are also adding performance targets for some goal areas to measure our region's progress toward delivering the transportation system we want.

## WHAT ARE THE ELEMENTS OF A PERFORMANCE-BASED PLAN?

■ Goal and Goal Statement: Desired 'big picture' future outcome for the metropolitan transportation system, broad statement of aspiration

- Objective: Specific outcome desired within a goal area, achievable by 2045 (plan timeframe)
- Standard: Specific technique for achieving an objective; identifies HOW objective will be met
- Performance Measure: Things that can be measured to evaluate if a standard is working
- Performance Target: Data point that defines success for a performance measure

## What should we add or refine?

## SYSTEM PRESERVATION

| Goal |
| :---: |
| Statement |

Objectives

Emphasize the preservation of the existing transportation system by first targeting federal funds towards existing infrastructure to spur revitalization, promote urban landscapes and protect rural landscapes.

| 47th Avenue at Belmont Road | Two-Way Stop | F | Traffic Signal | B |

$\square$ Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN UPDATE

## River Crossing Analysis

## Segment Level of Service and Change in Miles and Hours Traveled:

## KEY OBSERVATI ONS

- The Point Bridge link LOS operates better under the 17th Avenue S, Elks Drive and 32nd Avenue S river crossing alternatives.
- Gateway Drive operates better under the 17th Avenue S, Elks Drive, 32nd Avenue S, and 47th Avenue $S$ river crossings.
- DeMers Avenue experienced similar operations under each of the alternatives analyzed.
- Belmont Road operations were better under all the river crossing alternatives when compared to the No Build scenario.

Segment Level of Service:

| RIVER CROSSING LOCATION | 2045 No Build | 2045 with 17th Crossing | 2045 with Elks Crossing | 2045 with 32nd Crossing | 2045 with 47th Crossing | 2045 with Merrifield Crossing |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| US 2 | E | D- | D- | D | D | E |
| Demers Avenue | F | F | F | F | F | F |
| Minnesota Avenue / 4th Avenue / 1st Street SE | E | A | A | B | C | D |
| 17th Avenue S | - | A | - | - | - | - |
| Elks Drive | - | - | A | - | - | - |
| 32nd Avenue S | - | - | - | A | - | - |
| 47th Avenue S | - | - | - | - | A | - |
| Merrifield Road | - | - | - | - | - | A |

## Change in Vehicle Miles Traveled and Vehicle Hours Traveled Compared to 2045 No Build:

| METRIC | 2045 No Build | 17th Avenue S <br> River Crossing | Elks Drive River <br> Crossing | 32nd Avenue S <br> River Crossing | 47th Avenue S <br> River Crossing | Merrifield Road <br> River Crossing |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Change in Daily Vehicle <br> Miles Traveled | $1,054,784$ | $-9,858$ | $-14,600$ | $-24,721$ | $-13,393$ |  |
| Change in Daily Vehicle <br> Hours Traveled | 59,702 | $-12,374$ | $-12,254$ | -831 | $-17,717$ |  |

## Link LOS \& Volume Maps

Roadways with Similar Volumes

## River Crossing Analysis: Benefits \& Costs

## Where we were:

Early 2000 Planning Level Costs:

| CROSSING LOCATION | ALTERNATIVE | COST |
| :--- | :---: | :--- |
| 17th Avenue | Low | $\$ 16,368,000$ |
|  | High | $\$ 30,204,000$ |
| Elks Drive | Low | $\$ 10,668,000$ |
| 32 nd Avenue | Low | $\$ 19,140,000$ |
|  | High | $\$ 24,804,000$ |
| 47th Avenue | - | NA |
| Merrifield Road | Low | $\$ 19,500,000$ |

Where we are now:
2018 Planning Level Costs

| CROSSING LOCATION |
| :--- |
| ALTERNATIVE |
| 17th Avenue |
| Elks Drive |
| 32nd Avenue |
| Low |$\$ 33,000,000-\$ 39,000,000$

## KEY ASSUMPTIONS

- All proposed river crossing bridges are two-lane bridges
- All connections on each side are to two-lane roads
- No additional thru lane capacity was added
- No new connections were made to l-29 to the west
- No new connections were made to US 2 to the east
- All bridges have a trail except for Merrifield Road due to its rural location

## Streets + Highways Plan Update

September 12, 2018

Kimley»)Horn

## Agenda

- Update process and timeline
- Goals, objectives, performance measures and targets
- Final revenue forecasts
- Investment direction
- Investment scenarios
- River crossing analysis
- Next steps and timeline

## Plan Update Schedule: Where We Are

## Goals, Objectives, Performance

## Measures and Targets

## Goals, Objectives, Performance Measures and Targets Update Process

- November 2017
- DRAFT goal, objective, and strategy statements
" Resiliency and Tourism
- Potential safety targets, continued discussion
- December 2017
" DRAFT goal, objective, and strategy statements
. All goal areas
- Potential safety targets, continued discussion
- February 2018
" Finalized goal, objective, and strategy statements
" Reviewed recommended safety targets; Policy board adopted
- July 2018
- Reviewed draft pavement and bridge targets
- August 2018
= Reviewed draft travel time reliability targets
- September 2018
- Review recommended pavement, bridge, travel time reliability, and green house gas targets

## Tools for performance-based planning

[^26]
## Mobility Measures

- Interstate truck travel time reliability
- Interstate truck travel time reliability index
- Interstate travel reliability
- Percent of person-miles traveled on the Interstate that are reliable
- Non-Interstate travel reliability
- Percent of person-miles traveled on the non-Interstate NHS that are reliable

## Mobility Targets

- Must adopt 3 targets; Can adopt up to 6 targets; Or a number between
- 3 targets would mean just for MPO Area
- 6 Targets would mean just both state targets
- Can choose to adopt combinations of MPO and state targets
- Next slides present the targets adopted for each state

## Mobility Measures and Targets

|  | North Dakota | Minnesota | GF-EGF MPO |
| :---: | :---: | :---: | :---: |
| Interstate truck travel time reliability | Two-year target: 3 Four-year target: 3 | Two-year target: 1.5 <br> Four-target: 1.5 <br> No facilities in Grand Forks-East Grand Forks MPO area | Data shows : <br> - 1.19 (2017) <br> - 1.22 (2018) <br> DRAFT TARGET: <br> - 1.5 |
| Interstate travel reliability | Two-year target: 85\% <br> Four-year target: 85\% | Two-year target: 80\% <br> Four-year target: 80\% <br> No facilities in Grand Forks-East Grand Forks MPO area | Data shows 100\% <br> DRAFT TARGET: 90\% |
| Non-Interstate travel reliability | Two-year target: Not applicable <br> Four-year target: $85 \%$ | Two-year target: Not applicable <br> Four-year target: 75\% | Data shows: <br> - 89.2\%(2017) <br> - 85.5\% (2018) <br> DRAFT TARGET: <br> - 85\% |

|  | Percent of Non-Interstate NHS Pavement in Poor Condition | 4\% | 4\% | 3\% | 3\% | States |
| PM3 | Percent of Reliable Person Miles on the Interstate | 80\% | 80\% | 85\% | 85\% | 90\% |
|  | Percent of Reliable Person Miles Reliable on the Non-Interstate NHS | N/A | 75\% | N/A | 85\% | 85\% |
|  | Truck Travel Time Reliability Index | 1.5 | 1.5 | 3 | 3 | 1.5 |

[^27]
## Environment Measures

- Percent change in tailpipe CO2 emissions on National Highway System as compared to calendar year 2017
- 2040 Plan Target reduce tailpipe CO2 emissions by 10 percent below 2007 levels

Compare 2006-2010-2015

- Downward trend in $\mathrm{CO}_{2}$ or $\mathrm{CO}_{2}$ equivalents - Current trend would not achieve 2040 target (10\% reduction from 2007 levels)

[^28]
## Investment Direction

## Input to Investment Direction

- Goals, objective, performance measures and targets
- Public input
- Issue areas (August 2017 public meeting)
- Investment priorities (January 2018 public meeting)
- State and local plans
- Safety plans
- Asset management plans
- Investment plans
- Available revenues

[^29]
## Input to Investment Direction:

Goals, objectives, performance measures and performance targets

GF-EGF goal areas

1. Economic vitality
2. Security
3. Accessibility and mobility
4. Environment/energy/quality of life
5. Integration and connectivity
6. Efficient system management
7. System preservation
8. Safety
9. Resiliency
10. Tourism

## Federal performance

 measures- Safety
- Fatalities
- Serious injuries
- Non-motorized fatalities and serious injuries
- State of Good Repair
- Pavement
- Bridge
- Mobility and Environment
- Truck travel time reliability
- Interstate travel reliability
- Non-Interstate travel reliability
- Percent change in tailpipe CO2 emissions on NHS vs CY2017

Input to Investment Direction: Public Input

Issue Areas

minor arterials
- ND Main Street

■ Local projects

## Investment Scenarios: Potential Discretionary Projects

- State of good repair
- Non-NHS federal aid-eligible streets and highways
- Bridge repair
- East Grand Forks Point Bridge Approach
- Intersections
- $32^{\text {nd }}$ Avenue/S Washington
- Central Ave 17 ${ }^{\text {th }}$ St to 23rd St
- Washington St/DeMers
- US 2 (Gateway) Washington St to Mill Rd
- US 2 (Gateway) Cambridge St to Columbia Rd
- Additional lanes
- Columbia Rd $14^{\text {th }}$ Ave S to $24^{\text {th }}$ Ave S
- I-29 interchange upgrades
- North Washington, US 2
(Gateway), DeMers, 32 ${ }^{\text {nd }}$ Avenue
- New grade separations
- US 2 (Gateway) east of I-29
- $42^{\text {nd }}$ Street north of DeMers Avenue
- River crossings
- $32^{\text {nd }}$ Avenue
- Merrifield Road

## River Crossing Analysis

River Crossing Analysis: Scope of Work

- Review transportation impacts of 5 river crossing locations
- Improve local traffic and connectivity
- Use 2045 travel demand model
- Review impacts on:
- Existing crossings
- Neighborhoods
- Local and regional roadway network
- Compare impacts of each crossing

[^32]
## River Crossing Modeling Assumptions

- All proposed river crossing bridges are two-lane bridges
- All connections on each side are to two-lane roads
- No additional thru lane capacity was added
- No new connections were made to I-29 to the west
- No new connections were made to US 2 to the east

## River Crossing Analysis

- Present link daily volumes and LOS
- Present draft intersection LOS from Synchro analysis
- Present initial alignment concepts
- Report on meeting held June 27 to discuss how Minnesota 47th Ave S connection may occur
- Review opinion of probable costs
- Review benefit/cost ratio
- Present evaluation tables

## River Crossing - Link LOS

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN LPPDATE

Elks Drive
River Crossing - Link LOS

Grand Forks-East Grand Forks MPO STREET/HIGHWAY PLAN LPDAIE

## 32nd Ave. S River Crossing - Link LOS

47th $A v e . S$
River Crossing - Link LOS

## River Crossing - Link LOS

- Point Bridge operates better under 17th, Elks Drive and 32nd Avenue crossing scenarios
- Gateway Drive operates better under all crossing scenarios except Merrifield Road
- Washington Street operates better under 17th Avenue and Elks Drive crossing scenarios although all scenarios have segments with undesirable operations
- Belmont Road operates better under all crossing scenarios based on link LOS but Belmont Road / 4th Avenue intersection LOS shows mitigation is required under Merrifield crossing scenario

## 2045 Traffic Demand on Roadway Segments

- 17th Avenue S (2-lane today) ~3,000 and ~10,000 vpd just west of Belmont and east of Washington Street, respectively (under 17th crossing scenario)
- 24th Avenue S (2-lane today) ~4,000 and ~7,500 vpd just west of Belmont and east of Washington, respectively (under Elks crossing scenario)
- 32nd Avenue S (mostly 2-lane today) ~10,500 and ~13,000 vpd just west of Belmont and east of Washington, respectively (under 32nd crossing scenario)
- 47th Avenue S (3-lane today) ~8,000 and ~9,000 vpd just west of Belmont and east of Washington, respectively (under 47th crossing scenario)

## Roadway Planning Capacities

- 2-lane urban roadway capacity is $\sim 8,000-10,000 \mathrm{vpd}$
- 17th Avenue is at high end of capacity threshold on the west end without conversion to 3-lane on west end (east end is fine)
- 24th Avenue demand is under low end of capacity threshold throughout
- 3-lane urban roadway capacity is $\sim 14,000-17,000 \mathrm{vpd}$
- 32nd Avenue requires 3-lane section
- Between Cherry and Washington restriping required
- Between Cherry and Belmont minor widening may be required (additional as-built and design standard input needed - appears 3-11 foot lanes would fit)
- 47nd Avenue requires a 3-lane section
- Between Washington and Belmont no changes are required
- East of Belmont a 3-lane section could be added with restriping only

## River Crossing - Intersection LOS

- Exhibit shows intersection LOS under each crossing scenario
- Expanded list from prior analysis

[^33]
## River Crossing - Intersection LOS

| Intersection | Existing Control | 2045 Unmitigated <br> LOS | Proposed Control | Mitigated Los |
| :---: | :---: | :---: | :---: | :---: | :--- | :--- |

## Draft River Crossing Alignments 47th Avenue S

## Draft River Crossing Alignments Merrifield Road

Grand Forks-East Grand Forks MPO STREET/MIGHWAY PLAN LPDATE

## 47th MN Jurisdiction Meeting

## 47th MN Jurisdictional Meeting

- Rhinehart Drive south of dike could be converted to County Road or County State Aid Highway ( $\sim 1.1$ miles)
- Rhinehart Drive between $13^{\text {th }}$ Street SE and dike could be converted to City Street and likely to be reconstructed as an urban section ( $\sim 0.8$ miles)
- $200^{\text {th }}$ Street to be converted to County Road or County State Aid Highway between the Red River and CSAH 58 ( $\sim 2.1$ miles)
- Improvements could be phased (i.e. Rhinehart Drive and 200th Street would not all have to be completed at once)

[^34]
## River Crossing Analysis: Opinion of Probable Costs

- Developed revised concept level quantities
- Developed opinion of probable cost for each alternative
- 2002 analysis typically had 3 pay items
- $17^{\text {th }}$ Ave S (low bridge) example:

| Description | Quantity | UM | Unit Price |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| COMMON EXCAVATION | 12,500 | CY | \$ | 8.00 | \$ | 100,000 |
| COMMON FILL | 22,300 | CY | S | 13.00 | \$ | 289,900 |

Plan Update Schedule: Where We Are

[^38]

## Ensuring Opportunities

## Planning One Community

"A community that provides a variety of complementary transportation choices, that are fiscally constrained, for people and goods."

November 13, 2018
Subject: Grand Forks-East Grand Forks Metropolitan Transportation Plan Update
To whom it may concern:
The Grand Forks-East Grand Forks Metropolitan Planning Organization is currently conducting a comprehensive update to our Metropolitan Transportation Plan. This plan serves as the reference document for federally or locally funded regionally significant transportation projects. The Update will bring our planning documents to the planning horizon year of 2045. We seek your consultation regarding our transportation planning efforts.

With limited revenues, our focus is on preserving the transportation system currently in place. No new facilities, no expansion of existing facilities beyond current right-of-way, no new alignments, and no additional crossing of rivers are financially feasible.

Attached is a map, that we have created based upon review of available resources, identifying environmentally sensitive areas. Please review and compare with your data and alert of us of any errors or omissions of information. We appreciate any comments prior to December 13, 2018 sent to me at Grand Forks-East Grand Forks MPO 255 N 4th Street, Grand Forks, ND 58206 or earl.haugen@theforksmpo.org.

Please feel free to visit our website: www.theforksmpo.org to learn more about our efforts to bring comprehensive, continuing, and coordinated transportation planning to our region. Also, please contact us at 701-746-2660 if you have any questions or would like additional information.

Sincerely,

## Earl Haugen

Executive Director

## Re: Grand Forks - East Grand Forks Metropolitan Transportation Plan Update Grand Forks County

Dear Mr. Haugen:
This department has reviewed the information concerning the above-referenced project submitted under date of November 15, 2018, with respect to possible environmental impacts.

This department believes that environmental impacts from the proposed construction will be minor and can be controlled by proper construction methods. With respect to construction, we have the following comments:

1. Care is to be taken during construction activity near any water of the state to minimize adverse effects on a water body. This includes minimal disturbance of stream beds and banks to prevent excess siltation, and the replacement and revegetation of any disturbed area as soon as possible after work has been completed. Caution must also be taken to prevent spills of oil and grease that may reach the receiving water from equipment maintenance, and/or the handling of fuels on the site. Guidelines for minimizing degradation to waterways during construction are attached.
2. Projects disturbing one or more acres are required to have a permit to discharge storm water runoff until the site is stabilized by the reestablishment of vegetation or other permanent cover. Further information on the storm water permit may be obtained from the Department's website or by calling the Division of Water Quality (701-328-5210). Projects disturbing less than one acre are also required to have a permit to discharge storm water runoff if they are part of a larger common plan of development or sale that disturbs one or more acres. A permit is not required for routine maintenance activities performed to maintain the original line and grade, hydraulic capacity, or original purpose of the facility.
3. The City of Grand Forks, Grand Forks County, the University of North Dakota, and the North Dakota Department of Transportation are required to address post-construction storm water quality as part of the North Dakota Pollutant Discharge Elimination System (NDPDES) Small Municipal Separate Storm Sewer System (MS4) General Permit

| Environmental Health | Division of | Division of | Division of | Division of |
| :---: | :---: | :---: | :---: | :---: |
| Section Chief's Office | Air Quality | Municipal Facilities | Waste Management | Water Quality |
| 701.328 .5150 | 701.328 .5188 | 701.328 .5211 | 701.328 .5166 | 701.328 .5210 |
|  |  |  |  |  |

requirements. Check with local officials to be sure local storm water management considerations are addressed.
4. Slurry, residue and concrete wash water resulting from concrete paving or repair activities must be managed or treated to prevent the material from adversely affecting waters of the state.
5. Storm water runoff from the project area discharges to a 303(d) listed water body (English Coulee). Extra care should be taken to ensure construction activity does not affect the water body.
6. The proposed project area overlies the Grand Forks glacial drift aquifer and portions of the project area are within Grand Forks' wellhead protection area. Care should be taken to avoid spills of any materials that may have an adverse effect on groundwater quality. All spills must be immediately reported to this Department and appropriate remedial actions performed.

The department owns no land in or adjacent to the proposed improvements, nor does it have any projects scheduled in the area. In addition, we believe the proposed activities are consistent with the State Implementation Plan for the Control of Air Pollution for the State of North Dakota.

These comments are based on the information provided about the project in the above-referenced submittal. The U.S. Army Corps of Engineers may require a water quality certification from this department for the project if the project is subject to their Section 404 permitting process. Any additional information which may be required by the U.S. Army Corps of Engineers under the process will be considered by this department in our determination regarding the issuance of such a certification.

If you have any questions regarding our comments, please feel free to contact this office.
Sincerely,

L. David Glatt, P.E., Chief

Environmental Health Section
LDG:cc
Attach.

## Construction and Environmental Disturbance Requirements

These represent the minimum requirements of the North Dakota Department of Health. They ensure that minimal environmental degradation occurs as a result of construction or related work which has the potential to affect the waters of the State of North Dakota. All projects will be designed and implemented to restrict the losses or disturbances of soil, vegetative cover, and pollutants (chemical or biological) from a site.

## Soils

Prevent the erosion of exposed soil surfaces and trapping sediments being transported. Examples include, but are not restricted to, sediment dams or berms, diversion dikes, hay bales as erosion checks, riprap, mesh or burlap blankets to hold soil during construction, and immediately establishing vegetative cover on disturbed areas after construction is completed. Fragile and sensitive areas such as wetlands, riparian zones, delicate flora, or land resources will be protected against compaction, vegetation loss, and unnecessary damage.

## Surface Waters

All construction which directly or indirectly impacts aquatic systems will be managed to minimize impacts, All attempts will be made to prevent the contamination of water at construction sites from fuel spillage, lubricants, and chemicals, by following safe storage and handling procedures. Stream bank and stream bed disturbances will be controlled to minimize and/or prevent silt movement, nutrient upsurges, plant dislocation, and any physical, chemical, or biological disruption. The use of pesticides or herbicides in or near these systems is forbidden without approval from this Department.

## Fill Material

Any fill material placed below the high water mark must be free of top soils, decomposable materials, and persistent synthetic organic compounds (in toxic concentrations). This includes, but is not limited to, asphalt, tires, treated lumber, and construction debris. The Department may require testing of fill materials. All temporary fills must be removed. Debris and solid wastes will be removed from the site and the impacted areas restored as nearly as possible to the original condition.

DEPARTMENT OF THE ARMY
CORPS OF ENGINEERS, OMAHA DISTRICT 1616 CAPITOL AVENUE

RECEIVED DEC 202018
reply to attention of
Planning, Programs, and Project Management Division

Mr. Earl Haugen<br>Grand Forks - East Grand Forks Metropolitan Planning Organization<br>255 North $4^{\text {th }}$ Street<br>Grand Forks, North Dakota 58206<br>Dear Mr. Haugen:

The U.S. Army Corps of Engineers, Omaha District (Corps) has reviewed your letter dated November 13, 2018 (received November 23, 2018) regarding the environmental review of the Grand Forks - East Grand Forks Metropolitan Transportation Plan Update, located in Grand Forks County, North Dakota and Polk County Minnesota. The project area is land located outside of the Corps, Omaha District's civil works boundary; therefore, we cannot provide specific comments on impacts to Corps owned or operated lands or environmental-based comments on the project. For these type of comments you will need to contact our St. Paul District as they have civil works jurisdiction over this area. Please direct all future correspondence regarding this project to the following address:

U.S. Army Corps of Engineers<br>St. Paul District<br>Attention: Mr. Nathan Wallerstedt, CEMVP-PM-B<br>180 Fifth Street East, Suite 700<br>St. Paul, Minnesota 55101

This project is located within the Corps' North Dakota and Minnesota, regulatory boundaries. As such, any proposed placement of dredged or fill material into waters of the United States will require Department of the Army authorization under Section 404 of the Clean Water Act. Inquiries on Section 404 permit requirements should be directed to the Bismarck and St. Paul Regulatory Offices. Preliminary and final project plans should be sent to the following addresses:

U.S. Army Corps of Engineers<br>Bismarck Regulatory Office<br>Attention: Ms. Patricia McQueary, CENWO-ODR-ND 1513 South 12th Street Bismarck, North Dakota 58504

U.S. Army Corps of Engineers<br>St. Paul Regulatory Office<br>Attention: Mr. Chad Konickson, CEMVP-OP-R<br>180 Fifth Street East, Suite 700<br>Saint Paul, Minnesota 55101-1678

If you have any questions, please contact Amee Rief of my staff at (402) 995-2544 or amee.I.rief@usace.army.mil and reference PD\# 8123 in the subject line.

Sincerely,

Eric A. Laux, PMP
Chief, Environmental \& Cultural Resources

Earl Haugen<br>Grand Forks East Grand Forks MPO<br>255 N 4 ${ }^{\text {th }}$ Street<br>Grand Forks, ND 58206<br>RE: Grand Forks-East Grand Forks Metropolitan Transportation Plan Update

Dear Mr. Haugen,
The North Dakota Parks and Recreation Department has reviewed the above referenced proposed Grand Forks-East Grand Forks Metropolitan Transportation Plan Update for Grand Forks, North Dakota.

Our agency scope of authority and expertise covers recreation and biological resources (in particular rare plants and ecological communities). The project as defined does not affect state park lands that we manage but may affect Land and Water Conservation Fund recreation projects that we coordinate. A map with LWCF project locations has been attached. All LWCF sites received assistance from the federal LWCF program and are under protection of section $6(\mathrm{f})$ of the LWCF Act. Any property taken from within the 6 f boundary of these sites must be replaced with property of equal market value. Should any public or private utilities need to be added or relocated on the LWCF recreational lands, the NDPRD must be consulted prior to any action taken. Please contact Genny Giese at 701-328-5364 or gegiese@,nd.gov if additional LWCF information is needed.

The North Dakota Natural Heritage biological conservation database has reviewed the project to determine if any current or historical plant or animal species of concern or other significant ecological communities are known to occur within an approximate one-mile radius of the project area. Based on this review, there are several rare species or significant ecological community documented within or adjacent to project site. Refer to map and spread sheet for more details.

We appreciate your commitment to rare plant, animal and ecological community conservation, management and inter-agency cooperation to date. For additional information, please contact me at (701-328-5370 or kgduttenhefner $a$.nd.gov Thank you for the opportunity to comment on this proposed project.

Sincerely,

R.USNDNHI*2018_122KD12.13.2018DL12.13.18

North Dakota Natural Heritage Inventory Biological and Conservation Data Disclaimer
The quantity and quality of data collected by the North Dakota Natural Heritage Inventory are dependent on the research and observations of many individuals and organizations. In most cases, this information is not the result of comprehensive or site-specific field surveys; many natural areas in North Dakota have never been thoroughly surveyed, and new species are still being discovered. For these reasons, the Natural Heritage inventory cannot provide a definite statement on the presence, absence, or condition of biological elements in any part of North Dakota. Natural Heritage data summarize the existing information known at the time of the request. Our data are continually upgraded and information is continually being added to the database. This data should never be regarded as final statements on the elements or areas that are being considered, nor should they be substituted for on-site surveys.
Estimated Representation Accuracy
community (versus buffer area added for locational uncertainty). Use of estimated representation accuracy provides a common index for the consistent comparison of EO reps, thus helping to ensure that aggregated data are correctly analyzed and interpreted.

## Precision

A single-letter code for the precision used to map the Element Occurrence (EO) on a U.S. Geological Survey (USGS) $7.5^{\prime}$ (or $15^{\prime}$ ) topographic quadrangle map, based on the previous Heritage methodology in which EOs were located on paper maps using dots.
S-Seconds: accuracy of locality mappable within a three-second radius; 100 meters from the centerpoint
M - Minute: accuracy of locality mappable within a one-minute radius; 2 km from the centerpoint
G - General: accuracy of locality mappalbe to map or place name precision only; 8 km from centerpoint U - Unmappable

## Red River Crossing Analysis Technical Report

## Memorandum

To: Earl Haugen, Executive Director Grand Forks - East Grand Forks MPO<br>From: Brandon Bourdon, P.E. (ND, MN), Kimley-Horn and Associates<br>Date: September 27, 2018<br>Re: Grand Forks-East Grand Forks MPO 2045 Street/Highway Plan Update River Crossing Alternatives Analysis

A variety of additional potential Red River crossing locations have been included in prior Grand Forks - East Grand Forks long range transportation plans. These additional river crossings have been discussed, documented, and analyzed at varying degrees since the late 1960s. Since the 2004 long range transportation plan update, the locations for any new river crossings have included both the $32^{\text {nd }}$ Avenue $S$ and Merrifield Road river crossings. The Merrifield Road crossing has been a "bypass" option that would provide regional benefit by reducing trips, particularly truck trips, through the urbanized area.

There has been renewed interest in adding an additional river crossing(s) recently. Since the Grand Forks - East Grand Forks Metropolitan Planning Organization (MPO) is in the process of updating the region's transportation plan, a high-level transportation focused planning analysis has been completed to assess some transportation benefits of several potential river crossings. This analysis focuses on the transportation planning impacts of the following potential river crossing locations:

- $17^{\text {th }}$ Avenue S
- Elks Drive (formerly referenced as $24^{\text {th }}$ Avenue S)
- $32^{\text {nd }}$ Avenue S
- $47^{\text {th }}$ Avenue S
- Merrifield Road

Advanced Traffic Analysis Center (ATAC) has been completing travel demand modeling as part of the 2045 Street/Highway Plan Update. ATAC used the regions travel demand model for this analysis to develop 2045 daily traffic forecasts. Kimley-Horn and WSB used these forecasts to analyze regional traffic pattern changes, link level volume to capacity (V/C) ratios, and local intersection level of service (LOS) for each of the five potential new river crossings scenarios. Each river crossing was analyzed at a regional and local level to allow for a comparison of transportation impacts. The purpose of this memorandum is to summarize the findings of this analysis.

In February 2018, an analysis was completed for the $24^{\text {th }}$ Avenue S, $32^{\text {nd }}$ Avenue S, $47^{\text {th }}$ Avenue S, and Merrifield Road river crossings. That also included the analysis of level of service at six intersections. This document has been revised to include additional analysis as directed by the Executive Board to revise the $24^{\text {th }}$ Avenue S crossing to Elks Drive, add the $17^{\text {th }}$ Avenue S crossing, and analyze intersection level of service at 15 intersections. One reason $24^{\text {th }}$ Avenue $S$ was referred to previously was familiarity with that roadway as opposed to Elks Drive that is less known in the community due to its much shorter length. Figure 1 shows the location of Elks Drive, $24^{\text {th }}$ Avenue S and their proximity to Grand Forks County Historical Society.

Figure 1: Location of Elks Drive

## Existing and No Build Traffic Conditions

Existing and No Build traffic conditions were analyzed on both a link and intersection LOS basis. The No Build scenario assumes no additional river crossing will be constructed. The link level analysis focused on several key corridors within the urbanized area of the MPO. The corridors analyzed are:

- Gateway Drive (US 2) from Columbia Road to Central Avenue
- DeMers Avenue from S Columbia Road to $4^{\text {th }}$ Street NW (Business US 2)
- $4^{\text {th }}$ Avenue $S /$ Minnesota Avenue $/ 1^{\text {st }}$ Street SE from DeMers Avenue to $3^{\text {rd }}$ Avenue SE
- Bygland Road / 3 ${ }^{\text {rd }}$ Avenue SE / 2nd Avenue NE from Rhinehart Drive to Business US 2
- $4^{\text {th }}$ Street NW / Business US 2 from DeMers Avenue to Polk CSAH 17
- TH 220 between US 2 and Polk CSAH 72
- $17^{\text {th }}$ Avenue S from S Washington Street to Belmont Road
- $24^{\text {th }}$ Avenue S from S Washington Street to Belmont Road
- $32^{\text {nd }}$ Avenue S from Columbia Road to Belmont Road
- $47^{\text {th }}$ Avenue S from S Washington Street to Belmont Road
- Belmont Road from $4^{\text {th }}$ Avenue $S$ to $17^{\text {th }}$ Avenue $S$
- S Washington Street from DeMers Avenue to $55^{\text {th }}$ Avenue $S$

Figure 2 below, shows the location of the analyzed corridors. The proposed new river crossing corridors were also analyzed.

In addition to the corridors, fifteen intersections were analyzed at an overall intersection LOS basis. The analyzed intersections include the following:

- $\quad 1^{\text {st }}$ Street SE at $3^{\text {rd }}$ Avenue SE
- Greenway Boulevard SE, Bygland Road SE, $13^{\text {th }}$ Street SE
- Greenway Boulevard SE at Rhinehart Drive SE
- DeMers Avenue at N $5^{\text {th }}$ Street
- DeMers Avenue at S Washington Street
- S Washington Street at $17^{\text {th }}$ Avenue S
- S Washington Street at $24^{\text {th }}$ Avenue S
- S Washington Street at $32^{\text {nd }}$ Avenue S
- S Washington Street at $47^{\text {th }}$ Avenue S
- $4^{\text {th }}$ Avenue $S$ at Belmont Road
- $17^{\text {th }}$ Avenue S at Belmont Road
- Elks Drive at Belmont Road
- $24^{\text {th }}$ Avenue S at Belmont Road
- $32^{\text {nd }}$ Avenue $S$ at Belmont Road
- $47^{\text {th }}$ Avenue $S$ at Belmont Road

Traffic patterns are anticipated to change at the intersection of US 2 / TH 220 / CR 76 if a river crossing was constructed. These changes in traffic patterns would result in lower traffic 2045 forecasts to the north on US 2 and higher traffic 2045 forecasts on TH 220. The amount of those changes will vary under each river crossing alternative. Operations and safety should be monitored at this location under future conditions to see if a change in traffic control is required based on changes in traffic patterns or crashes at this location.
Existing traffic patterns were first analyzed at a link level. To complete the link level analysis, ADT volumes (average daily traffic) and V/C ratios under Existing conditions were provided by ATAC. The V/C ratios were then compared to planning level LOS ratings based on typical facility V/C ratios. LOS ratings were then assigned to the links that were reviewed as part of this analysis.

Overall, the urbanized area is operating acceptably under Existing conditions although several links operate LOS C and D. Figure 3, below, shows the link level LOS under Existing conditions. Table 1 below describes the V/C thresholds for each of the LOS criteria.

Table 1: Link Level of Service Thresholds

| Level of Service | Link Level Volume to Capacity <br> LOS Threshold |
| :---: | :---: |
| A | 0.0 to 0.6 |
| B | $>0.6$ to 0.7 |
| C | $>0.7$ to 0.8 |
| D | $>0.8$ to 0.85 |
| D- | $>0.85$ to 0.9 |
| E | $>0.9$ to 1.0 |
| F | $>1.0$ |

Figure 2: Analyzed Corridors

Figure 3: Existing Conditions Link Level LOS Summary

Although analyzing link V/C ratios and LOS are beneficial, another way to analyze traffic is to focus on intersection operations. An intersection capacity analysis can identify operational concerns that may not be apparent by completing a link LOS analysis. To complete the intersection analysis existing turning movement counts, collected in 2017, were used to model intersection operations and review intersection LOS. This analysis was completed during the PM peak hour at the study intersections for Existing, 2045 No Build, and the five potential bridge crossing alternatives under 2045 conditions. Synchro version 9 was used to complete this analysis.

The LOS grades shown below, which are provided in the Transportation Research Board's Highway Capacity Manual (HCM), quantify and categorize the driver's discomfort, frustration, fuel consumption, and travel times experienced as a result of intersection control and the resulting traffic queuing. A detailed description of each LOS rating can be found in Table 2.

Table 2: Level of Service Grading Descriptions

| Level of Service | Description |
| :---: | :--- |
| A | Minimal control delay; traffic operates at primarily free-flow conditions; unimpeded movement within <br> traffic stream. |
| B | Minor control delay at signalized intersections; traffic operates at an unimpeded level with slightly <br> restricted movement within traffic stream. |
| $\mathbf{C}$ | Moderate control delay; movement within traffic stream more restricted than at LOS B; the formation <br> of queues contributes to lower average travel speeds. |
| D | Considerable control delay that may be substantially increased by small increases in flow; average <br> travel speeds continue to decrease. |
| E | High control delay; average travel speed no more than 33 percent of free flow speed. <br> F |

The range of control delay for each rating (as detailed in the HCM) is shown in Table 3. Signalized intersections are expected to carry a larger volume of vehicles and stopping is required during red time, so higher delays are generally tolerated more by drivers for each corresponding LOS ratings. In general, LOS D or better for overall intersection LOS is the accepted standard for existing and future intersection operations.

Table 3: Level of Service Grading Descriptions

| Level of <br> Service | Average Control Delay (s/veh) at: |  |
| :---: | :---: | :---: |
|  | Unsignalized Intersections | Signalized Intersections |
| A | $0-10$ | $0-10$ |
| B | $>10-15$ | $>10-20$ |
| C | $>15-25$ | $>20-35$ |
| D | $>25-35$ | $>35-55$ |
| E | $>35-50$ | $>55-80$ |
| F | $>50$ | $>80$ |

For unsignalized intersections, LOS is reported for the worst approach and overall intersection. Similar to the link level analysis, the overall intersection LOS does not show any issues at the analyzed intersections under Existing conditions. Table 4 below summarizes the Existing PM peak intersection operations.

Table 4: Existing Intersection LOS Summary

| Intersection/Crossing Scenario | Existing PM Peak |
| :---: | :---: |
| $1^{\text {st }}$ Street SE at $3^{\text {rd }}$ Avenue SE | A |
| Greenway Boulevard SE, Bygland Road SE, $13{ }^{\text {th }}$ Street SE | A |
| Greenway Boulevard SE at Rhinehart Drive SE | A |
| DeMers Avenue at $\mathrm{N} 5^{\text {th }}$ Street | B |
| DeMers Avenue at S Washington Street | D |
| S Washington Street at $17^{\text {th }}$ Avenue S | C |
| S Washington Street at $24^{\text {th }}$ Avenue S | C |
| S Washington Street at $32{ }^{\text {nd }}$ Avenue $S$ | D |
| S W ashington Street at $47^{\text {th }}$ Avenue S | B |
| $4^{\text {th }}$ Avenue S at Belmont Road | B |
| $17^{\text {th }}$ Avenue S at Belmont Road | A |
| Elks Drive at Belmont Road | B |
| $24^{\text {th }}$ Avenue S at Belmont Road | A |
| $32{ }^{\text {nd }}$ Avenue $S$ at Belmont Road | B |
| $47^{\text {th }}$ Avenue S at Belmont Road | A |

No Build conditions were analyzed in the same manner as existing conditions except using 2045 No Build ADTs and V/Cs provided by ATAC. Under this scenario, no additional bridge crossings were assumed by 2045. Figure 4 on the next page shows the link level LOS under 2045 No Build conditions. This analysis shows that several key corridors are operating undesirably (LOS worse than D). All three existing river crossings in addition to segments of S Washington Street and $32^{\text {nd }}$ Avenue $S$ are anticipated to operate at LOS E or F.

The link LOS is anticipated to deteriorate from LOS B to LOS E on the Point Bridge between today and 2045 under No Build conditions. This is not surprising given that ADTs on the Point Bridge have increased by $50 \%$ between 2010 and 2015.

Figure 4: 2045 No Build Conditions Link Level LOS Summary

In addition to the link level analysis, an intersection analysis was also completed. To develop volumes for the 2045 No Build scenario, link ADTs under Existing and 2045 No Build conditions were compared on all intersection approaches. Then a growth factor for each approach was developed based on that comparison. The growth factor was used to adjust the existing turning movement counts to create future turning movement volumes at each intersection.

The intersection LOS analysis shows a similar trend as the link level LOS. The intersections of S Washington Street and DeMers Avenue, S Washington Street and $32^{\text {nd }}$ Avenue S, $4^{\text {th }}$ Avenue S and Belmont Road and $32^{\text {nd }}$ Avenue S and Belmont Road show undesirable operations under 2045 No Build conditions. Table 5 below is a continuation of Table 4, it summarizes the intersection LOS under both Existing and 2045 No Build conditions.

Table 5: Existing and 2045 No Build Intersection LOS Summary

| Intersection/Crossing Scenario | Existing PM <br> Peak | 2045 No Build <br> PM Peak |
| :---: | :---: | :---: |
| $1^{\text {st }}$ Street SE at $3^{\text {rd }}$ Avenue SE | A | B |
| Greenway Boulevard SE, Bygland Road SE, 13 ${ }^{\text {th }}$ Street SE | A | C |
| Greenway Boulevard SE at Rhinehart Drive SE | A | A |
| DeMers Avenue at N 5 ${ }^{\text {th }}$ Street | B | B |
| DeMers Avenue at S Washington Street | D | E |
| S Washington Street at $17^{\text {th }}$ Avenue S | C | D |
| S Washington Street at $24^{\text {th }}$ Avenue S | C | D |
| S Washington Street at $32^{\text {nd }}$ Avenue S | D | E |
| S Washington Street at $47^{\text {th }}$ Avenue S | B | D |
| $4^{\text {th }}$ Avenue S at Belmont Road | B | F |
| $17^{\text {th }}$ Avenue S at Belmont Road | A | A |
| Elks Drive at Belmont Road | B | C |
| $24^{\text {th }}$ Avenue S at Belmont Road | A | A |
| $32^{\text {th }}$ Avenue S at Belmont Road | B | F |
| $47^{\text {th }}$ Avenue S at Belmont Road | A | A |

The operational challenges at the two S Washington Street intersections are also evident when looking at Figure 3, many areas where links are anticipated to operate at LOS E or F occur around these two intersections. The poor operations at $4^{\text {th }}$ Avenue $S$ at Belmont Road are attributed to the existing intersection control. The 2045 No Build volumes exceed the capacity of an all-way stop. The intersection of $4^{\text {th }}$ Avenue $S$ at Belmont Road was recently a signal, but it was removed after a vehicular crash rendered it inoperable. The poor operations at $32^{\text {nd }}$ Avenue $S$ at Belmont Road are attributed to the existing intersection control. The intersection is currently an all-way stop and the anticipated growth on each approach exceeds the capacity of an all-way stop. Figure 5 on the next page shows intersection LOS values from Table 5 on a map.

Figure 5: Existing and 2045 No Build Intersection LOS Summary

## River Crossing Analysis

Based on input from area political leaders and agency staff in the region, the following five potential new river crossing locations were analyzed: $17^{\text {th }}$ Avenue S, Elks Drive, $32^{\text {nd }}$ Avenue S, $47^{\text {th }}$ Avenue $S$ and Merrifield Road. Each river crossing was analyzed at a local level (intersection and link LOS) and regional level (global metrics such as urban vehicle miles traveled) under 2045 conditions to determine transportation related impacts of each potential crossing on the transportation network. A summary matrix of each river crossing is included at the end of this memo that provides an overall comparison.

## Local Impacts

Figures 6 through 15 on the following pages show the corridor ADTs and link level LOS for each of the potential river crossing alternatives. Here are a few observations noted:

- The Point Bridge link LOS operates better under the $17^{\text {th }}$ Avenue $S$, Elks Drive and $32^{\text {nd }}$ Avenue S river crossing alternatives.
- Gateway Drive operates better under the $17^{\text {th }}$ Avenue S, Elks Drive, $32^{\text {nd }}$ Avenue S , and $47^{\text {th }}$ Avenue S river crossings.
- DeMers Avenue experienced similar operations under each of the alternatives analyzed.
- Belmont Road operations were better under all the river crossing alternatives when compared to the No Build scenario.

Figure 6: ADT Summary for the Proposed $17^{\text {th }}$ Avenue S River Crossing

Figure 7: Link Level of Service Summary for the Proposed $17^{\text {th }}$ Avenue S River Crossing

Figure 8: ADT Summary for the Proposed Elks Drive River Crossing

Figure 13: Link Level of Service Summary for the Proposed $47^{\text {th }}$ Avenue S River Crossing

Figure 14: ADT Summary for the Proposed Merrifield Road River Crossing

Figure 15: Link Level of Service Summary for the Proposed Merrifield Road River Crossing

The second part of the river crossing analysis looked at the same fifteen intersections analyzed under the Existing and No Build scenarios. Turning movement counts for each intersection and each river crossing scenario were created using the same methodology as for the No Build scenario. Table 6 is a continuation of Tables 4 and 5. Table 7 provides a comparison to the 2000 and 2025 intersection LOS results from the 2000 river crossing analysis to the 2018 and 2045 LOS results from the 2018 river crossing analysis. In general, there has been a general deterioration of LOS at all the intersections. Also, those intersections identified as having the most operational challenges in the 2000 analysis are also identified as having the most operational challenges under the 2018 analysis.

Table 6: Intersection LOS Summary

| Intersection/Crossing Scenario | Existing PM Peak | 2045 <br> No Build PM Peak | 2045 Build 17th <br> Avenue S PM Peak | 2045 Build Elks Drive Crossing | 2045 Build 32nd Avenue S Crossing | 2045 Build 47th Avenue S Crossing | 2045 Build Merrifield Crossing |

*     - values from 2000 river crossing analysis

For the intersection analysis, there are some differences between the river crossing alternatives. Figure 16 on the following page summarizes the overall intersection LOS for each of the analyzed river crossings including Existing and No Build conditions.

Figure 16: Intersection LOS Summary

## Intersection Mitigation

As part of the river crossing intersection level of service analysis, mitigation for each intersection were analyzed to determine what if any mitigation techniques could be employed to bring all analyzed intersection to LOS D or better. As part of the mitigation process, the following mitigation hierarchy was established:

- Add turn lanes within existing ROW
- Intersection control modifications and/or add turn lanes that require additional ROW
- Alternative intersection design

Each intersection that operated at LOS E or LOS F under any of the 2045 Build scenarios, was analyzed using the hierarchy above to determine the most feasible mitigation. In most cases the worst-case river crossing scenario was similar to the No Build 2045 LOS. Table 8 below summarizes the mitigations.

Based on the mitigations in Table 8, two intersections could not be reasonably mitigated with strategies from the mitigation hierarchy described above. The following innovative intersection solutions are recommended for further consideration at these locations:

- S Washington Street and DeMers Avenue - continuous flow intersection (see Figure 17).

Figure 17: Continuous Flow Intersection Concept at S Washington Street and Demers Avenue

Table 8: Mitigated 2045 Build LOS Summary

| Intersection/Crossing Scenario | Existing Intersection Control | $\begin{aligned} & \text { Unmitigated } \\ & \text { LOS } \end{aligned}$ | Mitigated Control |  | Mitigated Mitigation Summary LOS |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Greenway Boulevard,13 ${ }^{\text {th }}$ Street SE at Bygland Road | Two-Way Stop | $\mathrm{F}^{1}$ | Traffic Signal / Roundabout | B | A conventional single lane roundabout would also result in acceptable operations. Also, could convert to a signal. |
| S Washington Street at DeMers Avenue | Traffic Signal | $E^{5}$ | Traffic Signal | D | Additional lanes are required and that is not very feasible given existing right-of-way using a conventional intersection improvement. Conversion to a continuous flow intersection showed benefit in 2013 analysis. |
| S Washington Street at $32^{\text {nd }}$ Avenue S | Traffic Signal | $F^{3}$ | Traffic Signal | NA | Additional lanes are required and that is not very feasible given existing right-of-way using a conventional intersection improvement. |
| $4^{\text {th }}$ Avenue S at Belmont Road | All-Way Stop | $F^{5}$ | Mini-Roundabout / Traffic Signal | B | Based on a high-level volume analysis, a mini-roundabout is also anticipated to operate at an acceptable LOS. Also, could convert to a signal. |
| $17^{\text {th }}$ Avenue S at Belmont Road | Two-Way Stop | $\mathrm{F}^{1}$ | Traffic Signal | C | Convert to a signal. |
| $24^{\text {th }}$ Avenue $S$ at Belmont Road | Two-Way Stop | $\mathrm{F}^{2}$ | Traffic Signal | B | Convert to a signal. |
| Elks Drive at Belmont Road | Two-Way Stop | $F^{2}$ | Traffic Signal | B | Convert to a signal. The WB approach also requires a left turn lane and a right turn lane. Right-ofway will need to be acquired to accommodate the WB approach widening. |
| $32^{\text {nd }}$ Avenue $S$ at Belmont Road | All-Way Stop | $F^{3}$ | Traffic Signal | C | Convert to a signal and add a EB and NB left. Widening on downstream approaches will be required to reduce skew through the intersection. |
| $47^{\text {th }}$ Avenue $S$ at Belmont Road | Two-Way Stop | $F^{4}$ | Traffic Signal | B | Convert to a signal and add a left turn lane on the NB/SB/WB approaches. Widening and urban street cross section will be required on the NB approach. |

1. Worst intersection LOS under $17^{\text {th }}$ Avenue S River Crossing
2. Worst intersection LOS under Elks Drive River Crossing
3. Worst intersection LOS under $32^{\text {nd }}$ Avenue S River Crossing
4. Worst intersection LOS under $47^{\text {th }}$ Avenue S River Crossing
5. Worst intersection LOS under Merrifield Road Crossing

## Regional Impacts

One goal of a new river crossing is to alleviate the anticipated congestion on the existing crossings by providing users an alternate route. Table 9 summarizes the ADTs by scenario for each of the existing and proposed river crossings. Many of the river crossing scenarios have similar results from a traffic volume perspective, although there is generally a decrease in the river crossing volume served by the proposed river crossing as it moves further to the south. There are also some notable decreases in traffic volumes on the Minnesota Avenue $/ 1^{\text {st }}$ Street SE crossing under the $17^{\text {th }}$ Avenue $S$, Elks Drive, $32^{\text {nd }}$ Avenue $S$ and $47^{\text {th }}$ Avenue $S$ scenarios.

Table 9: Forecast River Crossing ADTs Summary

| River Crossing Location | Existing | $\begin{aligned} & 2045 \text { No } \\ & \text { Build } \end{aligned}$ | $\begin{aligned} & 2045 \text { with } \\ & 17^{\text {th }} \\ & \text { Crossing } \end{aligned}$ | 2045 with Elks Crossing | 2045 with 32nd Crossing | 2045 with 47th Crossing | 2045 with Merrifield Crossing |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| US 2 | 18,700 | 29,100 | 27,700 | 27,400 | 27,400 | 27,800 | 28,300 |
| DeMers Avenue | 14,800 | 20,800 | 18,900 | 18,800 | 19,200 | 19,400 | 20,300 |
| $\begin{gathered} \text { Minnesota } \\ \text { Avenue / } 1^{\text {st }} \\ \text { Street SE } \\ \hline \end{gathered}$ | 7,600 | 12,700 | 7,500 | 7,300 | 8,000 | 9,300 | 11,100 |

| $47^{\text {th }}$ Avenue S | -- | -- | -- | -- | A | -- |
| Merrifield Road | -- | -- | -- | -- | -- | A |

Based on Tables 9 through 11, there is no one river crossing location that will solve all the issues shown under the No Build scenario. The improvement of the link LOS on Minnesota Avenue / $4^{\text {th }}$ Avenue S/ $1^{\text {st }}$ Street SE and Gateway Drive (US 2) for the $17^{\text {th }}$ Avenue S, Elks Drive, $32^{\text {nd }}$ Avenue $S$ and $47^{\text {th }}$ Avenue $S$ proposed river crossings is notable.

Table 12 summarizes the ADT link volumes on Bygland Road and TH 220 for each of the scenarios analyzed.
Table 13 summarizes the net difference between each scenario as compared to No Build on Bygland Road and TH 220.

Reviewing two of the primary roadways that would provide access between East Grand Forks to the proposed Red River crossing, TH 220 over the Red Lake River and Bygland Road north of Rhinehart Drive, also provides insight as to the impacts on local and regional traffic for each of the alternatives analyzed. Tables 12 and 13 shows that daily traffic on Bygland Road north of Rhinehart Drive will decrease more if the proposed $17^{\text {th }}$ Avenue S, Elks Drive or $32^{\text {nd }}$ Avenue $S$ river crossings are constructed. Conversely the TH 220 daily traffic would be highest if the $32^{\text {nd }}$ Avenue $S$ or $47^{\text {th }}$ Avenue $S$ river crossings were constructed. This relationship indicates that the northern crossing alternatives serve more local trips and the southern crossings serve more regional trips, although all crossings will have each trip type. The results shown in Table 13 are also shown in Figures 18 and 19 for TH 220 River Crossing and Bygland Road N. of Rhinehart Drive, respectively.
Table 12: Forecast ADTs on Bygland Road and TH 220 Summary

Figure 18: Change in traffic volumes on TH 220 at Red Lake River by River Crossing Scenario

Figure 19: Change in traffic volumes on Bygland Road, North of Rhinehart Drive by River Crossing Scenario

The travel demand model generates several measures of effectiveness on a network basis that allows for a comparison between the various river crossing scenarios including total vehicle miles traveled (VMT) and total vehicle hours traveled (VHT). Comparing the values of these measures for each scenario provides a better understanding of which alternatives reduces travel time and travel distance. Reducing the values of these measures is desirable because additional VHT is typically due to delay, additional travel time required to avoid areas of delay, or additional travel time because a more direct route is not available. For this analysis, adding a river crossing could serve some travelers more directly and allow for reduced delay and distance traveled on their trip. Conversely, some drivers may travel slightly out of their way to avoid delay that is typically experienced on an existing crossing and that could increase VMT and decrease VHT. Delay adds stress to drivers, additional costs for businesses, increased fuel consumption, and higher vehicle emissions. The benefits of lower VMT are similar to VHT although VHT can be tied more directly to driver impacts and costs where VMT is more directly associated to impacts on emissions and fuel consumption.

Tables 14 and 15, on the following pages, summarizes the urban VMT and VHT totals for each river crossing scenario by roadway classification and the differences in VMT as compared to the 2045 No Build scenario for all alternatives. Table 16 summarizes the differences in VHT as compared to the 2045 No Build scenario for all alternatives. Below are a few observations that can be made after reviewing these network measures:

- $17^{\text {th }}$ Avenue S River Crossing: Increases "Lower Functionally Classified VMT" the most of any alternative $(+9,358)$ and has the third greatest reduction in "Higher Functionally Classified VMT" $(-19,770)$. VHT is reduced the most of any alternative with the $17^{\text {th }}$ Avenue S Crossing $(-12,374)$.
- Elks Drive River Crossing: Increases "Lower Functionally Classified VMT" by $+4,627$ and has the greatest reduction in "Higher Functionally Classified VMT" $(-24,371)$. VHT is reduced the second most of any alternative with the Elks Drive Crossing at $-12,254$.
- $\quad 32^{\text {nd }}$ Avenue S River Crossing: Decreases "Lower Functionally Classified VMT" by $-1,321$ and has the second greatest reduction in "Higher Functionally Classified VMT" $(-23,418)$. VHT is slightly reduced under the $32^{\text {nd }}$ Avenue $S$ Crossing (-831).
- $47^{\text {th }}$ Avenue S River Crossing: Increases "Lower Functionally Classified" by +717 and decreases "Higher Functionally Classified VMT" by $-14,362$. VHT is increased slightly with the $47^{\text {th }}$ Avenue S Crossing (+174).
Merrifield Road River Crossing: Decreases "Lower Functionally Classified VMT" the most of any alternative $(-4,226)$ and "Higher Functionally Classified VMT" is decreased by $-16,098$. VHT is reduced the second most of any alternative (-679).

## Conclusions

A regional and local level analysis was completed for five potential river crossing locations. The analysis included a link LOS analysis, intersection LOS analysis, and comparison of river crossing volumes and network wide VMT and VHT under Existing (2017), No Build (2045), and the five potential river crossing scenarios (2045). All intersection LOS analysis was completed for PM peak conditions.

Under Existing conditions, there are minimal issues within the analysis area. Under 2045 No Build conditions all three existing river crossings in addition to segments of Washington Street and 32nd Avenue $S$ are anticipated to operate at LOS E or F. The intersections of S Washington Street and DeMers Avenue, S Washington Street and $32^{\text {nd }}$ Avenue S, $4^{\text {th }}$ Avenue S and Belmont Road, and $32^{\text {nd }}$ Avenue $S$ and Belmont Road also show undesirable operations under 2045 No Build conditions (LOS E or F). All three existing river crossings are anticipated to operate at an unacceptable LOS under 2045 No Build conditions.

A review of the daily traffic forecasts on Bygland Road north of Rhinehart Drive and the TH 220 Red Lake River crossing indicates that the northern crossing alternatives serve more local trips and the southern crossings serve more regional trips, although all crossings will have each trip type. Based on the information provided in Tables 12 and 13, a few conclusions can be made.

- There is an increase of about 2,000 vehicles per day at the TH 220 river crossing under the $17^{\text {th }}$ Avenue $S$ and Elks Drive crossings scenarios when compared to No Build. There is an increase of about 3,000 vehicles per day under the $32^{\text {nd }}$ and $47^{\text {th }}$ Avenue $S$ crossings scenarios when compared to No Build. This increase is only 1,200 vehicles per day under the Merrifield Road Crossing scenario. TH 220 serves more regional trips since it is three miles from the edge of East Grand Forks. The higher volumes under the $32^{\text {nd }}$ and $47^{\text {th }}$ Avenue $S$ crossing scenarios indicate that more regional trips are being pulled to those crossings as compared to the $17^{\text {th }}$ Avenue $S$ and Elks Drive Crossings. The fact that Merrifield Road has a lower forecast volume increase does not mean regional trips will not be the primary user but rather that many that travel from the southeast on US 2 would travel a different route to the river crossing to avoid traveling out of their way to use the TH 220.
- The traffic forecasts on Bygland Road N decrease under all river crossing scenarios but the amount of decrease is highest for the $17^{\text {th }}$ Avenue $S$ crossing and lowest for the Merrifield Crossing. Since Bygland Road $N$ serves a higher proportion of local trips this suggest that under all crossing scenarios traffic is anticipated to decrease due to utilization of the proposed river crossing (i.e. trips will cross to the south and avoid downtown Grand Forks/East Grand Forks). Since the decrease is larger when the proposed crossing is farther north, an increased percentage of the local trips served under the northern river crossing scenarios is to be expected.

The ADTs on Belmont Road north of $17^{\text {th }}$ Avenue $S$ are anticipated to decrease under each river crossing scenario when compared to 2045 No Action volumes. These decreases range from about 2400 for the $17^{\text {th }}$ Avenue $S$ and Elks Drive crossings, 1600 for the $32^{\text {nd }}$ Avenue $S$ and $47^{\text {th }}$ Avenue $S$ crossings, and 600 under the Merrifield Road crossing.

A review of the link LOS analysis for the four river crossing alternatives yielded the following observations:

- The Point Bridge link LOS operates better under the $17^{\text {th }}$ Avenue S, Elks Drive and $32^{\text {nd }}$ Avenue $S$ river crossing alternatives.
- Gateway Drive operates better under the $17^{\text {th }}$ Avenue $S$, Elks Drive, $32^{\text {nd }}$ Avenue S , and $47^{\text {th }}$ Avenue S river crossings.
- DeMers Avenue experienced similar operations under each of the alternatives analyzed.
- Belmont Road operations were better under all the river crossing alternatives when compared to the No Build scenario.

Where the signalized intersection LOS analysis showed operational concerns under future conditions, mitigations were analyzed at each intersection generally following the below mitigation hierarchy:

- Add turn lanes within existing ROW
- Intersection control modifications and/or add turn lanes that require additional ROW
- Alternative intersection design

Below is a summary of each intersection that was mitigated and the associated mitigation.

- $\quad$ S Washington Street at DeMers Avenue - Additional lanes are required and that is not very feasible given existing right-of-way using a conventional intersection improvement. Conversion to a continuous flow intersection showed benefit in 2013 analysis.
- $\quad S$ Washington Street at $32^{\text {nd }}$ Avenue $S$ - Additional lanes are required and that is not very feasible given existing right-of-way using a conventional intersection improvement. A quadrant roadway has some merit, but additional analysis is required.
- $4^{\text {th }}$ Avenue $S$ at Belmont Road - Based on a high-level volume analysis, a mini-roundabout is also anticipated to operate at an acceptable LOS. Also, could convert to a signal.
- $17^{\text {th }}$ Avenue $S$ at Belmont Road - Convert to a signal.
- Greenway Boulevard/13 ${ }^{\text {th }}$ Street SE at Bygland Road - A conventional single lane roundabout would result in acceptable operations. Also, could convert to a signal.
- $24^{\text {th }}$ Avenue $S$ at Belmont Road - Convert to a signal.
- Elks Drive at Belmont Road - Convert to a signal. The WB approach also requires a left turn lane and a right turn lane. Right-of-way will need to be acquired to accommodate the WB approach widening.
- $32^{\text {nd }}$ Avenue $S$ at Belmont Road - Convert to a signal. Avoided adding left turn lanes because downstream widening would be required to avoid skew for through traffic through intersection.
- $47^{\text {th }}$ Avenue $S$ at Belmont Road - Convert to a signal and add a left turn lane on the NB/SB/WB approaches. Widening and urban street cross section will be required on the NB approach.

A review of the link LOS and ADTs on the actual river crossing shows:

- There are notable decreases in traffic volumes on the Minnesota Avenue / $4^{\text {th }}$ Avenue $S / 1^{\text {st }}$ Street SE crossing under the $17^{\text {th }}$ Avenue S, Elks Drive, $32^{\text {nd }}$ Avenue $S$ and $47^{\text {th }}$ Avenue $S$ scenarios.
- There are improvements in the link LOS on Minnesota Avenue / $4^{\text {th }}$ Avenue $\mathrm{S} / 1^{\text {s }}$ Street SE and Gateway Drive (US 2) for the $17^{\text {th }}$ Avenue S, Elks Drive, $32^{\text {nd }}$ Avenue $S$ and $47^{\text {th }}$ Avenue $S$ proposed river crossings.
A review of the network wide performance measures of VMT and VHT shows the following:
- $17^{\text {th }}$ Avenue S River Crossing: Shows the lowest reduction of any alternative, decreasing the total VMT by 9,858 . VHT is reduced the most of any alternative with the $17^{\text {th }}$ Avenue $S$ Crossing $(-12,374)$.
- Elks Drive River Crossing: Shows the third lowest reduction of any alternative, decreasing the total VMT by 14,600 . VHT is reduced the second most of any alternative with the Elks Drive Crossing at $-12,254$.
- $32^{\text {nd }}$ Avenue S River Crossing: Shows the largest decrease of any alternative, decreasing the total VMT by 24,721 . VHT is slightly reduced under the $32^{\text {nd }}$ Avenue S Crossing (-831).
- $4^{\text {th }}$ Avenue S River Crossing: Shows the $4^{\text {th }}$ lowest reduction of any alternative, decreasing the total VMT by 13,393 . VHT is increased slightly with the $47^{\text {th }}$ Avenue S Crossing (+174).
- Merrifield Road River Crossing: Shows the $2^{\text {nd }}$ lowest decrease of any alternative, decreasing the total VMT by $17,717 \mathrm{VHT}$ is reduced the second most of any alternative (-679).

## Red River Crossing Alignment Concept Development

It is important to understand at a planning level the cost differences between the alternatives because traffic operations and changes in traffic patterns are only one piece of the equation. A review of a cost benefit ratio of alternatives is one method that allows for both the cost and transportation system impacts of each crossing alternative to be compared.

As part of the 2025 Grand Forks-East Grand Forks Transportation Plan Update, Red River crossing concepts were developed for $17^{\text {th }}$ Avenue S, Elks Drive, $32^{\text {nd }}$ Avenue S, and Merrifield Road. In 2005, there was a more detailed review of the Merrifield River Crossing completed as part of the "Merrifield Road Red River Bridge Feasibility Study" (Feasibility Study). The $17^{\text {th }}$ Avenue S, Elks Drive and $32^{\text {nd }}$ Avenue $S$ Crossings each had two main alternatives: "high and dry" and "low" alternative. The high and dry alternative raised the elevation of the low steel on the bridge to three feet above the 210-year flood elevation. The lower alternatives more closely followed the alignment of the existing ground to reduce construction costs, although under this alternative there is a high likelihood of seasonal flooding.

The scope of this project is to build off the work that has been completed in the past to provide similar comparisons between the river crossings to allow decision-makers to provide input on river crossing location preferences at a planning level.

Concept level river crossing location exhibits were developed to show the potential river crossing horizontal alignment for each of alternative. These alignments generally follow previously developed concept alignments except for the following:

- $17^{\text {th }}$ Avenue $S$ previously ran on a nearly east-west alignment. $17^{\text {th }}$ Avenue $S$ starts at roughly the same location on the west side of the Red River but curves to the south on the Minnesota side of the river to avoid impacts to homes that have been constructed since the prior analysis was completed.
- Elk Drive is similar except on the west end the existing Elks Drive alignment is used as opposed to the prior alignment that ran in a northwest to southeast orientation.
- In the 2025 Plan, there were three alternative alignments shown for the $32^{\text {nd }}$ Avenue S river crossing. The option that brought the east end of the roadway within the dike system was selected for this analysis.
- $47^{\text {th }}$ Avenue $S$ was not previously reviewed. There was interest as part of this analysis to review this additional potential river crossing location. The alignment will run east from 47th Avenue S over the Red River and then turn to the northeast to ultimately connect near the intersection of Rhinehart Drive/445th Avenue SW and 200th Street SW. This analysis only includes a low concept because a high and dry concept would likely require extending the dike system in Minnesota approximately one mile to the south.
- For Merrifield Road, the alignment was like alignment 1A in the Feasibility Study.

Since this is an area wide transportation plan, concept drawings are not allowed to show engineering level details This is required because further analysis such as bridge feasibility studies and environmental documents will be required to analyze a river crossing location that is selected to move forward. Those documents are the appropriate place to analyze these crossing with this additional detail.

Figures 20-24 show the alignments for each river crossing that were used to completed the cost benefit analysis.

Figure 24: Potential Red River Crossing Alignment at Merrifield Road

## Red River Crossing Opinion of Probable Costs

Once concept alignments were developed, quantities were estimated at a planning level for the five proposed Red River crossings locations. These quantities were developed using the concepts shown in Figures 20-24. The following typical section, consistent with the typical section assumed as part of the Feasibility Study, was used for all river crossings with the exception of the Merrifield Crossing where the trail section was not assumed given its rural location:

The following are some assumptions that were used to develop the opinion of probable costs:

- Drainage and erosion control $-40 \%$ of all items except bridge, dikes, and mobilization
- Non-quantifiable minor items - 20\% of all items except for bridge, dikes, drainage, erosion control and mobilization
- Mobilization - 8\% of all other construction items
- Contingency - 10\% of all construction items
- Engineering design and construction - 25\% of construction cost
- Right-of-way costs were not included in this analysis

The prior analysis completed for the 2025 plan develop cost estimates using very high level planning techniques. The following four unit prices that went into those costs: intersection reconstruction type, length of bridge, length of roadway and if there were dike modifications. Additional review was completed as a part of this analysis to expand the list of quantities used to develop the opinion of probable costs.

Since bridge costs have a history of considerable variation and are such a large part of these concept costs, additional detail is provided here to explain how the bridge planning level unit price was developed. A bridge construction cost of $\$ 150 /$ SF is typically used for general, high-level planning purposes. However, bridges over the Red River will require significant costs not typically found in a 'normal' bridge (e.g., river cofferdams and significant quantities of large, driven piles), that drastically increase the construction cost. These bridges, in an urban setting, will also likely receive higher than normal amounts of architectural treatments, which will also increase cost. Due to several unknowns, a conservative unit cost well above the \$150/SF planning level costs noted above was used.

In recent years, construction costs have increased significantly across the board. For illustration purposes, items and quantities from MnDOT Br 14012 (US-10 over the Red River in Fargo, built 2003), were combined with today's costs to give a 'real world' cost for a modern bridge constructed over the Red River in northern Minnesota, in an urban environment. Br 14012 is a continuous steel girder bridge, the cost of which has fluctuated dramatically over the last few years (e.g., \$2.34/lb in 2017, \$4.20/lb 2016 and $\$ 10.00 / \mathrm{lb}$ in 2015); this item's cost has a dramatic effect on the overall cost/square foot (\$/SF) of the bridge. The estimate for this bridge could now be nearly $\$ 26$ million, or around $\$ 360 /$ SF, compared to the original cost of about $\$ 130 /$ SF. However, these river crossing bridges are candidates for continuous steel beams, to shorten the structural depth to assist in obtaining the clearance over the high-water elevation. This type of structure could be over $\$ 300 /$ SF. NDDOT and MnDOT both provided input on recent bridge costs and both DOT's agreed that $\$ 250 /$ SF was a reasonable unit price estimate. Due to variability in historic construction costs, bridge unit costs of $\$ 250 / \mathrm{SF}$ and $\$ 300 / \mathrm{SF}$ were used to develop a range of opinion of
probable costs for each alternative. Since a $10 \%$ contingency is being assumed for the overall cost, addition contingency was not added to the assumed $\$ 250-\$ 300 /$ SF bridge unit prices.

Tables 17-24 show the opinion of probable cost for each of the river crossing alternatives. Table $\mathbf{2 5}$ summarizes the cost from the early 2000 river crossing analysis. Table 26 summarizes the 2018 planning level opinion of probable costs for each river crossing alternative in one location. These options have not been vetted against geotechnical, hydraulic, or structural capacities, and represent a very high-level opinion of probable cost for each option. Further investigation of these unknowns will be required to more accurately define these costs. The quantities developed represents a level of effort coinciding with a regional long range planning study. To provide opinion of probable cost, items, quantities, and prices used have been determined using existing plans, previous project experience, and engineering judgement.
The bridge cross-section used as part of the prior analysis is still an appropriate cross-section to use as part of a long-range planning study. The goal is usually to be more conservative during planning phases of the project. Although it is still recommended that as part of a river crossing feasibility or environmental study additional review of the bridge cross-section is completed. At that time confirming the cross-section and testing more conservative options is prudent. Based on our review the following are potential areas where the bridge width could be reduced:

- There could be an option to save 4' by reducing the shoulders from 8' to 6 ' which provides $18^{\prime}$ in each direction. This width is still wide enough for most traffic to get around a stalled vehicle if it were parked on the edge although many vehicles would not fit well within the provided 6' shoulder.
- Consider reducing the width of bridge provided from the end of the barrier to the edge of the bridge. There is a potential $2^{\prime}$ ( $1^{\prime}$ in each direction) that could be saved by reducing the bridge width between the edge of the barrier and edge of the bridge.
- The pedestrian facility could be reduced from $12^{\prime}$ to $10^{\prime}$ saving $2^{\prime}$ of bridge width.

If the narrower cross-section discussed above is agreed to during a feasibility or environmental study, a reduction in bridge costs of about $12 \%$ could be achieved.

## 17TH AVENUE S RIVER CROSSING

Table 17: $17^{\text {th }}$ Avenue $S$ River Crossing Opinion of Probable Cost (Low)

| Description | Quantity | UM | Unit Price |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| COMMON EXCAVATION | 16,500 | CY | $\$$ | 8.00 |

## RIVER CROSSING COST SUMMARY AND COMPARISON

Tables 25 and 26 that compare the early 2000 and 2018 river crossing costs show a significant increase in the anticipated costs that have occurred over the last 18 years. This is due in part to rising construction costs and inflation. A range is provided in Table 26 due to the early stages of the planning process and to account for potential variations in construction costs. The range was developed using two different bridge unit costs, \$250/SF and $\$ 300 /$ SF, to develop a range of opinion of probable costs for each alternative..

Table 25: River Crossing Alternative Cost Summary (early 2000 costs)

| Cost Summary - Early 2000 Analysis |  |  |  |
| :---: | :---: | :--- | ---: |
| Crossing Location | Alternative | Cost |  |
| 17th Avenue S | Low | $\$$ | $16,368,000$ |
|  | High | $\$$ | $30,204,000$ |
| Elks Drive | Low | $\$$ | $10,668,000$ |
| 32nd Avenue S | Low | $\$$ | $19,140,000$ |
|  | High | $\$$ | $24,804,000$ |
| 47th Avenue S | -- |  | NA |
| Merrifield Road | Low | $\$$ | $19,500,000$ |

Table 26: River Crossing Alternative Cost Summary (2018 costs)

| Cost Summary - Year 2018 |  |  |
| :--- | :---: | :---: |
| Crossing Location | Alternative | Cost |
| 17th Avenue S | Low | $\$ 33,000,000-\$ 39,000,000$ |
|  | High | $\$ 76,000,000-\$ 91,000,000$ |
| Elks Drive | Low | $\$ 21,000,000-\$ 24,000,000$ |
|  | High | $\$ 63,000,000-\$ 74,000,000$ |
| 47th Avenue S | Low | $\$ 29,000,000-\$ 33,000,000$ |
| Merrifield Road | High | $\$ 63,000,000-\$ 75,000,000$ |

The high bridge options all cost considerably more than the low bridge options. Given the lack of funding available and resulting lower B/C ratios, the Grand Forks - East Grand Forks MPO Executive Board voted to eliminate additional work associated with the high river crossing alternatives.

## Red River Crossing Benefit Calculations

With opinion of probable cost estimates completed, benefit is the other variable that needs to be determined to calculate the benefit cost ratio. The cost difference for the following benefit categories: travel time, operations, crash costs, and air quality was calculated for each river crossing. The key assumptions used in these calculations were:

1. Year of Opening 2030; analysis consists of a 20 -year benefit period consisting of 260 weekdays per year, consistent with best practices and USDOT guidance. Note, however, that some benefits would also accrue during weekend days; therefore, the results provided below may underestimate benefits (and associated benefit cost ratios).
2. Base year (2015) and forecasted (2045) VMT and VHT were from Grand Forks-East Grand Forks MPO Travel Demand Model. Base year VMT/VHT was adjusted to reflect the same proportional difference between No Build/Build scenarios as used in the previous analysis. Because 47th Avenue S was not previously analyzed, the proportion from the 32nd Avenue S Alternative was used for that alternative.
3. Values for discount rate (7\%), vehicle occupancy rates, crash costs, and emissions costs were based on USDOT's Benefit-Cost Analysis Guidance for Discretionary Grant Programs, June 2018. The auto vehicle operating cost/mile used was the IRS mileage rate of $\$ 0.545 / \mathrm{mile}$. The auto travel time cost/hour used was the Bureau of Labor Statistics North Dakota mean hourly wage of \$23.14.
4. Average crash rates were derived from MnDOT Segment Crash Toolkit and Grand Forks MPO functional classification system design criteria.
5. There were two different fleet compositions assumed: 1) fleet composition based on an estimate of $5 \%$ trucks (except for the Merrifield Road Alternative, where 10\% was assumed) and 2) fleet composition with $0 \%$ trucks (assumes trucks are prohibited on the new crossings).

Tables 27-36 include the total benefits and travel time, operations, crash cost and air quality sub component benefits for each river crossing concept and fleet composition combination. There is only a slight difference between the with and without truck alternatives with the with truck alternatives having a higher benefit.

These benefit values were then divided by costs to develop a benefit cost ratio for each scenario. Construction costs were discounted to assume construction occurring in 2028-2029 and residual value (remaining capital value) was calculated to account for the fact that the service life of some infrastructure (e.g. bridges) would last beyond the assumed 20 -year benefit period.

Table 27: $17^{\text {th }}$ Avenue S River Crossing Benefits (with $5 \%$ trucks)

| Benefit Category | Benefits Compared to No Build <br> Alternative (\$2017) |
| :--- | ---: |
| Travel Time | $\$ 22,799,000$ |
| Operations | $\$ 6,434,000$ |
| Crash Costs | $\$ 898,000$ |

| Total Benefits | $\$ 32,679,000$ |

## Red River Crossing Evaluation Summaries

Using the information discussed previously, tables have been created for each river crossing documenting VHT, VMT, Construction Costs and B/C ratio. Tables 37-41 summarize this information for each river crossing alternative. The tables included below are the fleet scenario that does not include trucks.

Table 37: $17^{\text {th }}$ Avenue S River Crossing Evaluation Summary (Low) (without trucks)

| Issue | Method of Measurement | Units | Value | Change from Base Conditions |
| :---: | :---: | :---: | :---: | :---: |
| Traffic Operations Factors |  |  |  |  |
| Traffic Flow and Congestion | VHT statistics from the travel demand model | Daily vehicle hours traveled | 59,056 | (646) |
| Reduced Trip Length | VMT statistics from the travel demand model | Daily vehicle miiles traveled | 1,044,926 | $(9,858)$ |
| Project Costs |  |  |  |  |
| Construction Costs | Estimated cost of construction in 2018 dollars | Dollars | \$33,000,000-\$39,000,000 | N/A |
| Socio Economic Factors |  |  |  |  |
| Roadway User Economic Analysis | Use VMT and VHT statistices to determine benefits compared to construction costs | B/C ratio | 1.9-2.1 | N/A |

Table 38: Elks Drive River Crossing Evaluation Summary (Low) (without trucks)

| Issue | Method of Measurement | Units | Value | Change from Base Conditions |
| :---: | :---: | :---: | :---: | :---: |
| Traffic Operations Factors |  |  |  |  |
| Traffic Flow and Congestion | VHT statistics from the travel demand model | Daily vehicle hours traveled | 59,180 | (522) |
| Reduced Trip Length | VMT statistics from the travel demand model | Daily vehicle miiles traveled | 1,040,184 | $(14,600)$ |
| Project Costs |  |  |  |  |
| Construction Costs | Estimated cost of construction in 2018 dollars | Dollars | \$21,000,000-\$24,000,000 | N/A |
| Socio Economic Factors |  |  |  |  |
| Roadway User Economic Analysis | Use VMT and VHT statistices to determine benefits compared to construction costs | B/C ratio | 2.6-3.0 | N/A |

Table 39: $32^{\text {nd }}$ Avenue S River Crossing Evaluation Summary (Low) (without trucks)

| Issue | Method of Measurement | Units | Value | Change from Base Conditions |
| :---: | :---: | :---: | :---: | :---: |
| Traffic Operations Factors |  |  |  |  |
| Traffic Flow and Congestion | VHT statistics from the travel demand model | Daily vehicle hours traveled | 58,871 | (831) |
| Reduced Trip Length | VMT statistics from the travel demand model | Daily vehicle miiles traveled | 1,030,063 | $(24,721)$ |
| Project Costs |  |  |  |  |
| Construction Costs | Estimated cost of construction in 2018 dollars | Dollars | \$29,000,000-\$33,000,000 | N/A |
| Socio Economic Factors |  |  |  |  |
| Roadway User Economic Analysis | Use VMT and VHT statistices to determine benefits compared to construction costs | B/C ratio | 3.1-3.5 |  |

Table 40: $47^{\text {th }}$ Avenue S River Crossing Evaluation Summary (Low) (without trucks)

| Issue | Method of Measurement | Units | Value | Change from Base Conditions |
| :---: | :---: | :---: | :---: | :---: |
| Traffic Operations Factors |  |  |  |  |
| Traffic Flow and Congestion | VHT statistics from the travel demand model | Daily vehicle hours traveled | 59,876 | 174 |
| Reduced Trip Length | VMT statistics from the travel demand model | Daily vehicle miiles traveled | 1,041,391 | $(13,393)$ |
| Project Costs |  |  |  |  |
| Construction Costs | Estimated cost of construction in 2018 dollars | Dollars | \$26,000,000-\$30,000,000 | N/A |
| Socio Economic Factors |  |  |  |  |
| Roadway User Economic Analysis | Use VMT and VHT statistices to determine benefits compared to construction costs | B/C ratio | 0.4-0.5 |  |

The $47^{\text {th }}$ Avenue $S$ river crossing would also require the reconstruction of approximately 1.9 miles of Rhinehart Drive $/ 445^{\text {th }}$ Avenue SW between the intersections of $13^{\text {th }}$ Street SE and Rhinehart Drive $/ 445^{\text {th }}$ Avenue SW and Rhinehart Drive $/ 445^{\text {th }}$ Avenue SW and $200^{\text {th }}$ Street SW and 1.5 miles of $200^{\text {th }}$ Street between Rhinehart Drive/445 Avenue SW and CSAH 58. Those reconstruction costs are not included in Table 40.

Table 41: Merrifield Road River Crossing Evaluation Summary (Low) (without trucks)

| Issue | Method of Measurement | Units | Value | Change from Base Conditions |
| :---: | :---: | :---: | :---: | :---: |
| Traffic Operations Factors |  |  |  |  |
| Traffic Flow and Congestion | VHT statistics from the travel demand model | Daily vehicle hours traveled | 59,023 | (679) |
| Reduced Trip Length | VMT statistics from the travel demand model | Daily vehicle miiles traveled | 1,037,067 | $(17,717)$ |
| Project Costs |  |  |  |  |
| Construction Costs | Estimated cost of construction in 2018 dollars | Dollars | \$32,000,000-\$35,000,000 | N/A |
| Socio Economic Factors |  |  |  |  |
| Roadway User Economic Analysis | Use VMT and VHT statistices to determine benefits compared to construction costs | B/C ratio | 2.2-2.4 |  |

We also reviewed the B/C ratios based on the with truck fleet scenario (assumed 5\% trucks at all crossing except Merrifield where $10 \%$ trucks were assumed). The benefic cost ratios were the same under all scenarios above except the following:

- 32nd Avenue $S$ has a high-end $B / C$ ratio of 3.6 with trucks as compared to 3.5 without trucks
- Elks Drive has a low-end B/C ratio of 2.7 with trucks as compared to 2.6 without trucks.

Table 42 summarizes the $B / C$ ratios for each river crossing alternative in one location.

Table 42: River Crossing Alternative B/C Summary

| B/C Summary |  |  |
| :--- | :---: | :---: |
| Crossing Location | Alternative | Cost |
| 17th Avenue S | Low | $1.9-2.1$ |
| Elks Drive | Low | $2.6-3.0$ |
| 32nd Avenue S | Low | $\mathbf{3 . 1}-\mathbf{3 . 5}$ |
| 47th Avenue S | Low | $0.4-0.5$ |
| Merrifield Road | Low | $\mathbf{2 . 2 - 2 . 4}$ |

Based on B/C information above, all the low river crossing options have $B / C$ ratios above 1.0 except for the $47^{\text {th }}$ Avenue $S$ river crossing. The $32^{\text {nd }}$ Avenue $S$ river crossing has the highest $B / C$ ratio of the three river crossings that will serve mostly local traffic. The Merrifield Road river crossing has the highest B/C ratio of the two river crossings that will serve mostly regional trips.

## 1. INTRODUCTION

The Grand Forks East Grand Forks MPO's (The GF-EGF MPO) Travel Demand Model (TDM) is updated every five years to reflect new ground truths/data and the advancements in the state-of-the-art in transportation modeling techniques and methods. The current update reflects base year 2015 data. The model is a four-step TDM including trip generations, trip distributions, modal split and trip assignment. The update process involves calibrating the model input parameters and validating the model output with ground truths. The model calibration is a cyclical process as shown in Figure 1.

Figure 1 GF-EGF TDM Calibration Flow Chart

The rest of this document describes the model update process including the data, methods and models that were used to update the model. Chapter 2 discusses the improvements made to the 2015 TDM; Chapter 3 discusses the capacity calculation methodology; Chapter 4 discusses the input data used in the model; Chapter 5 summarizes the trip generation models and methods; Chapter 6 discusses the trip distribution step; Chapter 7 discusses the trip assignment step; Chapter 8 discusses the model calibration, validation and output.

## 2. IMPROVEMENTS TO THE 2015 TDM

For the 2015 base year model, several updates were made to the model to reflect the availability of new and improved data, new and advanced methods in modeling software and the inclusion of long-haul freight movements as part of the model. New data that was used for 2015 model update included: Origin Destination Data (Obtained from Airsage), the traffic analysis tool data, incorporation of truck counts and FAF data to model freights.

### 2.1. Origin Destination Data Obtained from Airsage

Origin-destination (OD) data were obtained from a commercial vendor Airsage. Airsage is a company that aggregates cell phone cellular-signal data points anonymously in partnership with the nation's largest wireless carriers. Origin Destination data were collected for the entire North Dakota and external locations rather than for the GF/EGF MPO area only. Overall, a total of 301 OD TAZs were used. OD TAZs are defined as TAZS that were used in the OD survey data collection. Of the 301 OD TAZs, 61 were TAZs internal to the GF/EGF MPO area. The internal OD TAZs were an aggregation of the TAZs in the GF/EGF TDM which had a total of 584 TAZs. Figure 2 shows the overall OD TAZs and the GF/EGF MPO TAZs geographies.

Figure 2 OD TAZs
Different datasets were provided by Airsage reflecting temporal, socioeconomic and weekday/weekend data and included the following tables:

Average Weekday 24 Hour trip matrix reflecting the total 24-hour Origin-Destination by trip purposes (HBW, HBO, NHB). Three Matrices were provided for different socioeconomic variables including age (5 year cohorts), income (\$10,000 increments), and vehicle attributes ( $0->5$ for rent/owner households).

Average Weekday Peak Hour matrices (7:00AM-10:00AM, 10:00AM-4:00PM, 4:00PM7:00PM) by trip purposes. Three Matrices were provided for different socioeconomic variables including age (5 year cohorts), income ( $\$ 10,000$ increments), and vehicle attributes ( $0->5$ for rent/owner households).

1. Weekend matrices for each of the weekends of October 2015 by trip purposes (HBW, HBO, NHB). Three Matrices were provided for different socioeconomic variables including age (5 year cohorts), income ( $\$ 10,000$ increments), and vehicle attributes ( $0->5$ for rent/owner households) for each weekend.
2. Long Distance ODs, showing external-external trips for the full day for both weekday averages and each weekend for HBW, HBO and NBH trips. No socioeconomic data were provided for these matrices.
The OD data is very useful in differentiating trips that are internal to the GF-EGF MPO area: internal-internal (II) trips, trips that pass through the GF-EGF MPO area: external-external (E-E) trips, and trips that start/end in the MPO area with the other end outside the MPO area: internal-external/external-internal (IE/EI) trips.

### 2.1.1. Internal-Internal OD Trip Summary

Table 1 summarizes the OD data by trip purpose and by time periods. For HBW trips for the GF/EGF MPO TAZs, the late-morning to early-evening period had the highest proportion of trips (30\%) followed by the AM Peak and Night periods ( $25 \%$ each) and the PM Peak period (20\%). The late-morning to early-evening period had the highest proportion of HBO trips (36\%), followed by the Night period (27\%), PM peak (21\%) and AM Peak (17\%). This is expected and possibly because fewer non-work trips originate from homes during the morning peak period. Trip activity locations such as malls, schools, walk-in hospitals, banks, typically open after 8:00AM. For NHB trips, the late-morning to early-evening period again has the highest proportion of trips (45\%), followed by the PM Peak (23\%), AM Peak (17\%) and the Night period (16\%).

The \% overall column reflects the percentage of trips that had at least one end in the Grand Forks East Grand Forks MPO area with respect to the entire dataset. 23\% of HBW, $14 \%$ of HBO, and $9 \%$ of NHB, of total trips in the overall North Dakota data had trip ends in the GFEGF MPO area. The data shows the trip purposes by time of day, Peak AM, Peak Afternoon, Peak PM and Night trips.

Table 1 Summary of Internal-Internal OD Data from Airsage

| Grand Forks/East Grand Forks MPO TAZ OD Trips |  |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: |

| NHB | $15 \%$ | $53 \%$ | $21 \%$ | $11 \%$ | $100 \%$ |  |

### 2.1.2. Internal-External/External-Internal Origin Destination Data

The data were further disaggregated to reflect the different proportions of trips by purpose and type for different external locations. The external locations were distinguished as North, South, East and West with Interstate 94 and U.S. Highway 2 are the main highway trips used for entry/exit to the GF/EGF MPO area. This was done to evaluate whether trips from the North (which included trips from Canada) had different Peak AM proportions for HBW for example.

Table 2 shows the IE and EI trip data and the proportions of IE/EI trips to the total trips for each trip purpose and time period. The table shows OD trips that had at least one trip end in the study area. IE/EI trips made up 15\% of the total trips. For HBW trip purpose, the proportion of EI/IE is $12 \%$ of the total trips and ranged from $10 \%$ to $15 \%$ for the different time periods. For HBO trips, the IE/EI made up 13\% of total trips and ranged from $11 \%$ to $15 \%$ for the different time periods. The NHB trips for IE/EI where $18 \%$ of the total GF/EGF NHB trips and ranged from $17 \%$ to $22 \%$ for the different time periods.

Table 2 IE and EI Trips from OD Data for the GF-EGF MPO Area

| Total IE Trips |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 7-10AM | 10AM-4PM | 4-7PM | Night | Total |  |  |  |  |  |  |

| Total | $16 \%$ | $14 \%$ | $14 \%$ | $16 \%$ | $15 \%$ |  |  |  |  |  |  |

NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update

### 2.1.3. External-External OD Data

External-External (EE) OD data shows the trips that pass through the GF/EGF MPO area without stopping. Transient locations were not included in the OD dataset provided by Airsage which would have simplified the task of obtaining EE trips. The data itself does not inform us if a trip between two OD pairs possibly passed through the GF/EGF MPO area. The implication was that EE data had to be estimated using an algorithm that took into account the possibility that trips between OD pairs passed through the GF/EGF MPO area. The methodology developed incorporated the use of real time travel data between OD pairs and was developed using an online mapping application APIs. The method assumed that trips between OD pairs will use the shortest travel time path between the OD pairs. The methodology to estimate EE OD pairs that passed through the GF/EGF MPO is as follows

1. Select all OD pairs that are not part of the internal GF/EGF MPO OD TAZs i.e. not part of the 61 GF/EGF OD TAZs. Remaining 240 OD TAZs fit this category.
2. Calculate average shortest travel path between all OD pairs using API algorithm developed for online mapping application for each time period.
3. Evaluate whether any portion of the route between each OD pair included a spatial location point within the GF/EGF MPO area (longitude/latitude).
4. If yes to 3, trips between those OD pairs were considered as EE trips for the GF/EGF MPO area.

Table 3 shows the percentages of EE trips that pass through the GF/EGF MPO area by trip type and by trip purpose. Table 3 also shows the proportion of each EE trip type as the overall proportion of EE and EI trips. Overall, EE trips made up about $17 \%$ of total EE and EI/IE trips. This was a lot higher than the typically used 10-12\% through trip percentages.

The percentage of EE only trips ranged from $21 \%$ for the AM Peak period to $37 \%$ for the late-morning to early-afternoon period. For HBW, the majority of trips occurred during the Night period (30\%) with the least amount of trips occurring during the PM Peak period (17\%). This could be because this time period includes the early morning (6:00AM to 7:00 AM) and late evening (7:00PM to 9:00PM) trips. Trips passing through the GF/EGF MPO area for work may typically leave early and arrive later due to comparatively longer travel times. For HBO trips, the pattern is similar to the HBW trips with 35\% of trips occurring at night and $17 \%$ of trips occurring during the AM Peak period. For NHB trips, the latemorning to early-afternoon period had the highest percentage of trips (43\%) followed by the AM Peak period (23\%), and the Peak PM and Night periods (17\% each).

Table 3 EE Trips from OD Data

| EE Trips passing through GF-EGF MPO |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

### 2.1.4. Use of Airsage OD Data in the TDM

The OD data were used to calibrate and validate the trip generation and trip distribution steps of the model. Prior models could not distinguish between EE trips for HBW and HBO trips for the AM Peak period for example. Ultimately, it leads to more precise and accurate models.

### 2.1.4.1. Trip Generation

For trip generation, the data were used primarily to disaggregate daily trips into peak and off peak periods for the different trip purposes and for different trip types (II/IE/EI and EE trips). UND trips were also enhanced and developed using the OD data. This created a more refined and more accurate output that was used for later parts of the model. The refinement greatly enhanced the ability of the model to replicate ground truths.

### 2.1.4.2.Trip Distribution

Trip distribution assigns trips generated in the trip generation step between origin and destination pairs. The typical output of the trip distribution step in TDMs is a matrix showing the origin and destination of each trip. For the GF/EGF MPO TDM, the gravity model was used to distribute trips. The gravity model uses the trip generation outputs (productions and attractions by trip purpose for each zone), a measure of travel impedance NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update
between each zonal pair (travel time), and socioeconomic/area characteristic variables ("K-factor") variables as input. The K-factor is used to account for the effects of variables other than travel impedance in the model. The OD data were used to develop K-factor matrices imputed in the gravity model that were used for distributing trips for each time period and purpose.

### 2.1.5. Evaluating the OD Data for Major Trip Generators

UND, Columbia Mall and the Altru Hospital are some of the "Special" trip generators within the GF-EGF MPO area. An analysis of the OD data for trips attracted to these TAZS was performed to show how the data can be used to visually show the OD data. Figures 3, 4 and 5 show trip attractions to UND, the mall and the Altru Hospital.

Figure 3 shows the weekday trip attractions to UND for 18-24 year olds. It shows that most trips that end up in UND for this age group originate from within the UND TAZs (10-25\%). TAZs South of Demers, East of Washington, North of 32nd Ave S and East of the River produced between $5-10 \%$ of trips made by 18-24 year olds that end in the UND TAZs. The Grand Forks Air force base (TAZ) to the West of the Metro area produces between 1 and 3 $\%$ of trips that were attracted to UND. Figure 4 shows the percentage of trips attracted to the mall for the different TAZs. TAZs around UND generates the highest percentage of trips that end up in the mall (5-10\%). TAZs South of Demers, East of Washington, North of 32nd Ave $S$ and East of the River again generate a good proportion of trips that end up at the Columbia Mall (3-5\%). The rest of the trips are fairly evenly distributed amongst the other TAZs. Figure 5 shows the trips that are attracted to the zone that includes the Altru Hospital. Zones around UND provide the highest number of trips to the Altru hospital. The Grand Forks Air Force Base generates a good proportion of trips that end up in the Hospital. TAZs South of Demers, East of Washington, North of 32nd Ave S and East of the River produced between 0.5 and $1 \%$ of trips that ended at the Altru Hospital. Overall, the data shows some interesting trends with respect to where trips originate and terminate for some of the major trip generators in the area.

Figure 3 Origin Percent of Trips Attracted to UND for 18-24 Year Olds from Airsage OD Data

Figure 4 Origin Percent of Trips Attracted to the Columbia Mall from Airsage OD Data

Figure 5 Origin Percent of Trips Attracted to the Altru Hospital TAZ from Airsage OD Data

NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update
2.1.6. Comparing Peak AM and Peak PM Data to the Traffic Data Analysis Tool To validate the OD data with locally collected data it was compared to the Traffic Data Analysis tool which collect traffic volumes for several intersections in the City of Grand Forks. Table 1 shows the percentage of AM, Afternoon, PM and Night periods for the OD data and the traffic data analysis intersection tool data from October 2010. The difference ranged from -3\% for the Afternoon and PM Peak periods to $3.3 \%$ for the AM peak period. Overall, the OD data seems to fairly reflect observed data.

Table 4 Comparison of Temporal Airsage OD Data and Traffic Analysis Intersection Data

|  | 7AM-10AM | 10AM-4PM | 4PM-7PM | 7PM-7AM | Total |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Airsage OD | $18.5 \%$ | $39.0 \%$ | $21.8 \%$ | $20.7 \%$ | $100 \%$ |
| Intersection Tool Data | $15.2 \%$ | $42.0 \%$ | $24.7 \%$ | $18.0 \%$ | $100 \%$ |
| Difference | $3.3 \%$ | $-3.0 \%$ | $-3.0 \%$ | $2.6 \%$ | $0 \%$ |

For visualization purposes, Figure 6 shows the comparison of the Airsage OD data and the Traffic Analysis Intersection Data. The percentage differences are very small and the OD data is representative of the intersection data. The only difference is that the OD data can be differentiated into trip purposes whereas the intersection data contains overall trips. The OD data can be used to however differentiate the intersection data into different trip purposes.

Figure 6 Comparison of Temporal Airsage OD Data and Traffic Analysis Intersection Data

### 2.1.7. Potential Shortcomings of the OD Data

Although the OD data provides unique opportunities to improve on the TDM, there were some deficiencies in the data.

1. By nature of the data being collected on cell phone tower pings, some zones did not show any ODs. For example, the Grand Forks Airport did not attract or produce any trips. This is because all of the trips to the Grand Forks Airport were shown in the TAZ East and Adjacent to the airport.
2. The data did not show transient locations between Origins and Destinations. Paths between OD pairs can be estimated using network data.
3. The data does not include all cell phone networks and could suffer from cell phone provide biases. For example, low income earners might use different networks from the major networks for cost savings.
4. The raw data collected is anonymous and does not contain the demographic data that is provided with the dataset. The provider uses an algorithm to create the profile for average users (age, gender etc) based on their socioeconomic data. We cannot verify the veracity of the algorithm or the socioeconomic data that was used for this process.
5. The data does not distinguish between truck and passenger vehicles.

### 2.2. Freight Analysis Framework Data

The Freight Analysis Framework (FAF) data integrates data from various sources to create a comprehensive freight movement data among states and major metropolitan areas for all transportation modes. The data provides estimates for tonnage (thousand tons) and value (million dollars) by regions of origins and destinations, commodity type, and mode. Data are available for the 2012 base years, years 2012-2015, and forecasts from 2020 to 2045 in five-year increments.

The FAF data for North Dakota is aggregated for the entire state. For Minnesota, the data is aggregated into two zones: The twin Cities Metropolitan area and the rest of the state. A methodology was necessary to disaggregate the data to the MPO level. Data for Grand Forks came from the North Dakota FAF aggregate data while data for East Grand Forks came from the aggregate Minnesota FAF Data. A regression model was developed to disaggregate the statewide data to the MPO level. The model used the employments as the explanatory variable. Overall, the model had very good fit with R-square ranges from 65-95 \%.

The output of the regression models were the tonnage of freight produced and attracted to each of the Cities in the MPO (Grand Forks and East Grand Forks respectively). The Tonnage was then distributed to each TAZ proportionally based on the employment for
that TAZ. Tonnages were then converted to truck trips using the commodity type characteristics (typical weight and size).

### 2.3. Traffic Analysis Intersection Data Archival

The Grand Forks-East Grand Forks MPO (MPO) and the City of Grand Forks (City) intend to utilize the already existing traffic detection cameras for traffic data collection. The intersection turning movement counts when collected over significant amount of time (e.g. a year) can be then used in various traffic operations, transportation planning, and highway design applications. This data is being used as an additional tool to validate AM and PM model output and turning movement output of the model.

## 3. CAPACITY CALCULATIONS

Capacities play a critical role in TDM as they are not only used to measure the Level of Service but are also critical in the assignment step. Traffic is assigned based on the saturation (Volume to Capacity) of each link, which will result in traffic being moved to other links as this value increases. The Transportation Research Board 2010 defined capacity as follows: "The capacity of a system element is the maximum sustainable hourly flow rate which persons or vehicles reasonably can be expected to travers a point or a uniform section of a lane or roadway during a given time period under prevailing roadway, environmental, traffic, and control conditions. Capacity analysis examine roadway elements under uniform traffic, roadway, and control conditions."

NCHRP 716 on the other hand define the "Capacity" in a traffic engineering sense is not necessarily the same as the capacity variable used in travel demand model networks. In early travel models, the capacity variable used in such volume-delay functions as the BPR formula represented the volume at Level of Service (LOS) C; whereas, in traffic engineering, the term "capacity" traditionally referred to the volume at LOS E."

Link capacities are a function of the number of lanes on a link; however, lane capacities can also be specified by facility and area type combinations. Several factors are typically used to account for the variation in per-lane capacity in a highway network, including:

- Lane and shoulder widths;
- Peak-hour factors;
- Transit stops;
- Percentage of trucks
- Median treatments (raised, two-way left turn, absent, etc.);
- Access control;
- Type of intersection control;
- Provision of turning lanes at intersections and the amount of turning traffic; and
- Signal timing and phasing at signalized intersections.

Some networks combine link capacity and node capacity to better define the characteristics of a link (Kurth et al., 1996). This approach allows for a more refined definition of capacity and speed by direction on each link based on the characteristics of the intersection being approached.

NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update

To update the model capacity calculations, first a literature review was performed among similar type of MPO outside of North Dakota-Minnesota (Lincoln-NE, Des Moines Area-IA, Syracuse Metropolitan Transportation Council-NY, Chattanooga-Hamilton County Regional Planning Agency-TN, Knoxville Regional Transportation Planning Organization-TN, Tulare County Associations of Governments-CA); larger MPO than FM Metro COG (Atlanta Regional Commission-GA, Dallas-Fort Worth-TX, Chicago Metropolitan Agency for Planning-IL, Capital Area-MO. The assumptions of similar MPOs or larger MPOs came from the population's threshold value defined by NCHRP 716. Table 5 summarizes the literature review used in different MPO planning models for capacity calculations.

## Table 5 Summary of Capacity Calculations for MPO Planning Models

| $\begin{aligned} & \text { Lincoln } \\ & \text { MPO-NE, } \\ & 2006 \end{aligned}$ | For the Lincoln MPO model, capacity at Level of Service (LOS) C was used as the threshold capacity. Highway Capacity Manual (HCM) 2000 procedures were used for estimating the capacity for each combination of functional class and area type. First, peak hour lane capacity was calculated after the effects of percent green time, and peak hour factor. Second, the 24 hour lane capacity was calculated using peak hour lane capacity and percent of traffic in the peak hour. Finally, threshold capacity at LOS C was assumed to be $75 \%$ of the 24 hour lane capacity. <br> Reference: LIMA \& Associates, 2006 <br> http://www.princeton.edu/~alaink/Orf467F12/LincolnTravelDemandModel.pdf |
| :---: | :---: |
| VDOT, 2014 | For all model regions, it is acceptable practice and recommended practice to use the most recent version Highway Capacity Manual (HCM) as the basis for roadway capacities. It is not acceptable to use older versions of the HCM or arbitrary figures for roadway capacities. <br> Based on functional class and land use/area type <br> Tabulation process <br> Reference: <br> http://www.virginiadot.org/projects/resources/vtm/vtm policy manual.pdf |
| ODOT, 1995 | The procedure used to estimate free flow speed and capacity is a detailed methodology that utilizes the maximum amount of information from the network and "connects" this data with information from the Highway Capacity Manual. http://www.oregon.gov/ODOT/TD/TP/docs/reports/guidex.pdf |
| Memphis MPO-TN | Hourly capacities were developed for the Memphis model in order to use collected street data. This provides the most accurate representation of actual capacity (levels of service A through E) on an individual link. These capacities - detailed in the Technical Memorandum \#8(b) - Capacity Development - are implemented using an equation which takes into account functional classification, speed limit, lanes, signal density, median treatment, area type, average lane width, and average shoulder width. The capacity equations are built into the model process as a TransCAD lookup table, so modifications to network attributes automatically update the capacity in subsequent runs Since the model is based on four multi-hour time periods, a conversion factor must be used to create a time period capacity for each of the four time periods. The capacity factors below are based on hourly traffic count data and the Memphis household travel survey http://www.memphismpo.org/sites/default/files/public/documents/lrtp/appendix-g-travel-demand-model.pdf |
| GDOT, 2013 | Facility type and area type are used in combination to determine free-flow speeds and capacities. Link capacities for the model network are obtained from a lookup table of per-lane hourly capacities based on facility type and area type. The final link capacity is calculated by multiplying the hourly capacity per lane by the number of lanes, which is automatically added to the links during the model application. <br> http://www.dot.ga.gov/BuildSmart/Programs/Documents/TravelDemandModel/GDOT\%20Model\%20Users\%20G ude 050813.pdf |
| $\begin{aligned} & \text { MassDOT, } \\ & 2013 \end{aligned}$ | The coding of the EMME/2 highway network basically follows the hierarchy of the functional classification system. Expressways, other than those passing through denser urban areas, are generally coded for 60 mph speeds and hourly capacity per lane of 1,950 . Higher-level arterials are coded for speeds ranging from 45 to 50 mph and corresponding capacities of 1,050 to 1,100 . Lower-level arterials and major collectors range from 35 mph to 40 mph , with capacities of 950 to 1,000 . Minor collectors and local streets that are not in urban centers range from 23 mph to 30 mph , with capacity generally at 800 . Streets in urban centers can have substantially lower speeds and capacities. <br> https://www.massdot.state.ma.us/theurbanring/downloads/CTPS Travel Demand Modeling Methodology.pdf |

NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update

| Syracuse Metropolitan Transportati on Council, NY, 2012 | The speed and capacity values are stored in lookup tables and automatically imported to the network each time the model runs. The main benefits of importing these data from a lookup table, as opposed to maintaining an explicit speed and capacity for every link within the highway network, are that the user has less data to manage and can easily quote values. However, there are some links in the SMTC network that warrant special attention because their actual speed or capacity is substantially different from what the lookup tables say. Therefore, the SMTC model also supports the ability to code a speed or capacity for each link by entering a value into the "TOTAL_HCAP_FIXED" or "SPEED_FIXED" fields on the network <br> http://www.thei81challenge.org/cm/ResourceFiles/resources/SMTC\%20Model\%20Version\%203.023\%20Docum entation.pdf |
| :---: | :---: |
| Atlanta <br> Regional Commission (ARC), GA, 2011 | By area type and facility type <br> Tabulation method <br> 20 facility type and 7 area type <br> Total link capacity ( 1 Hr - LOS E) <br> http://www.atlantaregional.com/transportation/travel-demand-model |
| $\begin{aligned} & \text { Capital Area } \\ & \text { MPO } \\ & \text { (CAMPO)- } \\ & \text { MO, } 2013 \\ & \hline \end{aligned}$ | The model computes link capacities at run time. Capacities are initially based on functional class and number of lanes, adjusted based on directionality, median type, and roadway slope. Capacity is expressed in terms of vehicles per day for each link by direction. <br> http://www.jeffersoncitymo.gov/11Jan2013CAMPOTDMDocumentation.pdf |
| ChampaignUrbana Urbanized Area Transportati on Study (CUUATS), IL | The daily capacity for each link in the Champaign County model network was calculated based on its facility type and area type. If a Two-Way Left Turn Lane (TWLTL) was present, the link capacity was increased by $30 \%$. The lookup table was included in the model script to uniformly assign the capacity on the model network. The centroid connectors have high capacity and very low speed (15mph). |
| Chattanooag <br> a-Hamilton <br> County <br> Regional <br> Planning <br> Agency, TN, 2013 | Using the collected street data, the proposed capacity calculation for Chattanooga model will be implemented using an equation which takes into account data such as functional classification, speed limit, lanes, median treatment, area type, average lane width, and average shoulder width. Traffic signal delays and impact of steep grades may also be considered. The equations were originally developed using the Highway Capacity Manual (HCM) and analysis performed by the Indiana Department of Transportation in 1997 for the Indiana State Highway Congestion Analysis Plan. KHA successfully applied this method in other urban area models, in conjunction with analysis performed using North Carolina DOT's Level of Service (LOS) software. http://www.chcrpa.org/2040RTP/2040RTP Draft Plan/Volume III Travel Demand Model.pdf |
| Dallas-Fort <br> Worth (DF): <br> North <br> Centeral <br> Texas COG, <br> TX, 2009 | Hourly Capacity Per Lane (Divided or One-Way Roads) - The hourly capacity per lane for divided roads is given by area type and functional class. AMFactor, PMFactor, OPFactor - These factors are used in the conversion of capacity from hourly to time period. Factors are defined by functional class 1-8 <br> http://www.nctcog.org/trans/modeling/documentation/DFWRTMModelDescription.pdf |
| San Diego Association of Government <br> s, CA, 2011 | Two capacities are calculated for each direction of a hhghway link: 1. Intersection and mid-link Hourly basis Time category Factored Future ramp metering improved the capacity grow in 10 percent . <br> See the equations <br> http://www.sandag.org/uploads/publicationid/publicationid 1624 13779.pdf |
| Chicago Metropolitan Agency for Planning, IL, 2014 | Zonal capacity system Capacity represented within the link travel time function is approximately the service volume at level of service C. It is calculated as 75 percent of the level of service E time period link capacity. Note that link capacity is calculated by multiplying the hourly lane capacity by the number of lanes and the number of hours in the assignment time period |
| Omaha- <br> Council <br> Bluffs <br> Metropolitan <br> Area <br> Planning <br> Agency <br> (MAPA), NE, <br> 2010 | The daily capacity is based on the hourly ultimate capacity, that is, the point at which the Level of Service (LOS) changes from an " $E$ " to an " $F$ " as defined by the Highway Capacity Manual. To support the daily model, the hourly capacity is multiplied by a factor of 10 , which represents a typical ratio of peak hour to daily traffic. Capacity varies by functional class, presence of turn lanes, the number of lanes, and whether the road is divided or undivided. The capacities are based on those used in Des Moines, Iowa. The capacities vary by side friction to take into account differences in driveway density. MAPA is currently comparing the capacities with other sources such as the capacity tables developed by the Florida DOT. The model does not include intersection delay separately from link delay. MAPA has attempted to represent intersection delay using downward adjustments to free flow speeds https://www.fhwa.dot.gov/planning/tmip/resources/peer review program/mapa/mapa report.pdf |
| Des Moines Area MPO, IA, 2006 | Daily directional capacity of a link Divided or undivided Number of lanes Access condition |

NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update

|  | Facility coding <br> http://www.ctre.iastate.edu/educweb/ce451/LABS/Lab\%2012/DSM Documentation.pdf |
| :---: | :---: |
| KYOVA <br> Interstate <br> Planning Commission, WV, 2013 | Capacity based on area and functional class <br> Tabulation and look up method <br> http://www.kyovaipc.org/2040MTP/documents/KYOVA2040 ModelDocumentation 121213 withFigures.pdf |
| Knoxville Regional Transportati on Planning Organization , TN, 2010 | Peak hour capacities of the roadway network were estimated using Highway Capacity Manual 2000 procedures, which results in much more precise estimates of capacity verses traditional methods used in models that entail using a lookup table based on functional class and area type. <br> http://www.knoxtrans.org/plans/mobilityplan/cndetern.pdf |
| Tulare County Association of Government s, CA, 2015 | Link capacity is defined as the number of vehicles that can pass a point on a roadway at free-flow speed in an hour. One important reason for using link capacity as a model input is for congestion impact; which can be estimated as the additional vehicle -hours of delay based on the 2000 Highway Capacity Manual ( 2000 HCM). The capacity assumption used in the TCAG model of each road segment in the network is based on the terrain, facility type, and area type, which is consistent with the methodology suggested in the 2000 HCM http://www.arb.ca.gov/cc/sb375/tcag scs staff report final.pdf |

Figure 7 shows the comparison of the base 2010 GF-EGF MPO planning model capacity calculations to reviewed capacities for several different MPOs. The capacities for freeways are very similar to the capacities for the base 2010 GF-EGF model. For ramps, the capacities for other MPO areas were typically lower in comparison to the 2010 GF-EGF model. For major arterials, minor arterials, collectors and locals, the capacity calculations were typically higher for the MPOs compared. Most of these MPOs used a Level of Service E for capacity calculations, reason why their capacities were higher.

Figure 7 Capacity Comparisons to Grand Forks East Grand Forks MPO 2010 Base Year Model

For the 2015 base year model, network-wide capacities were updated to reflect the most recent Highway Capacity Manual HCM 6th Edition and capacities estimated in other recent literature. The calculation of capacities took into account several variables including the functional classification, the number of through links, the number of turn lanes, the location of the intersection (rural, urban, CBD, suburban), the intersection control and effective green ratios, heavy vehicle adjustment factors and the speeds. The capacities used for the 2015 model were slightly different from the 2010 models and represent the state-of-theart in capacity calculations in TDM. The next subsections discuss the capacity calculations for different types of intersections.

### 3.1. Capacity Calculations for Signalized intersections

For signalized intersections a step by step procedure was used to estimate the capacities.

### 3.1.1. Step 1: Develop Lane Groups for each Link

The first step defined the lane groups for each link. For the 2015 network, lane groups are defined by the Attribute Linkgrp1. Table 6 shows the codes for each link group. The lane group describes the geometry at the B-node of each link including the number of through lanes, the number of right turn lanes and the number of left turn lanes. The first Number in the linkgroup1 category shows the number of through lanes while the second number represents the number of turn lanes for either right or left turns as shown in Table 6. For example, if Linkgroup1 for a link was 20, it meant that link had two through lanes with no turn lanes. Similarly, if the Linkgroup1 code was 35, it means the link had three through lanes, with two right turn lanes.

## Table 6 Lane Group Classification (Linkgroup 1)

| Code | Lane Group Description |
| :---: | :--- |
| N0 | N through lanes and no turn lane |
| N1 | N through lanes and single exclusive left turn lane |
| N2 | N through lanes and two exclusive left turn lanes |
| N3 | N through lanes and continuous exclusive left turn lane from intersection to <br> intersection |
| N4 | N through lanes and single exclusive right turn lane |
| N5 | N through lanes and two exclusive right turn lanes |
| N6 | N through lanes and continuous exclusive right turn lane from intersection to <br> intersection |
| N7 | N through lanes, single exclusive left turn lane and single exclusive right turn <br> lane |
| N8 | N through lanes, two exclusive left turn lanes and single exclusive right turn <br> lane |
| N9 | N through lanes, two exclusive right turn lanes and single exclusive left turn <br> lane |

### 3.1.2. Step 2: Determining saturation flow rate ( $S_{i}$ ) for each lane group:

Step 2 included determining the saturation flow rate ( $S_{i}$ ) for each Lanegroup using Equation 1. It is important to note that not all the parameters in Equation 1 were used for the model. Some of the parameters like the lane width and approach grades are not used in calculating the saturation flow rate. If the data is however available, say for a subarea study, these paramters can potentially be used to estimate capcities. The parameters were developed from different sources including HPMS and HCM6.

## Equation 1

$S_{i}=S_{0} \times N \times f_{W} \times f_{H V} \times f_{g} \times f_{p} \times f_{b b} \times f_{a} \times f_{L U} \times f_{L T} \times f_{R T} \times f_{L p b} \times f_{R p b} \times P H F$
Where:

| $S_{i}$ | = | Saturation flow rate for subject lane group, expressed as a total for all lanes in lane group (vph) |
| :---: | :---: | :---: |
| So | = | Base saturation flow rate per lane (pcphpln) |
| $N$ | = | Number of lanes in lane group |
| $\mathrm{f}_{\mathrm{w}}$ | = | Adjustment factor for lane width |
| $\mathrm{f}_{\mathrm{HV}}$ | = | Adjustment factor for heavy vehicles in traffic stream |
| $\mathrm{fg}_{\mathrm{g}}$ | = | Adjustment factor for approach grade |
| $\mathrm{f}_{\mathrm{p}}$ | = | Adjustment factor for existence of a parking lane and parking activity adjacent to lane group |
| $f_{b b}$ | = | Adjustment factor for blocking effect of local buses that stop within intersection area |
| $\mathrm{f}_{\mathrm{a}}$ | = | Adjustment factor for area type |
| $\mathrm{f}_{\mathrm{LU}}$ | = | Adjustment factor for lane utilization |
| $\mathrm{f}_{\text {LT }}$ | = | Adjustment factor for left turns in lane group |
| $\mathrm{f}_{\mathrm{RT}}$ | = | Adjustment factor for right turns in lane group |
| $\mathrm{f}_{\text {Lpb }}$ | = | Pedestrian-bicycle adjustment factor for left turn movements |
| $\mathrm{f}_{\text {Rpb }}$ | = | Pedestrian-bicycle adjustment factor for right turn movements |
| PHF | $=$ | Peak Hour Factor |

The formulas for calculating the parameters in equation 1 from the HPMS are show next:

## 1. Base Saturation Flow Rate, So

Following the HPMS procedure, the base saturation flow rate was set at 1,900 passenger car per hour per lane (pcphpl).

## 2. Adjustment Factor for Lane Width, $f_{W}$

Using HPMS lane adjustment factors, Equation 2 was used to calculate the adjustment for lane widths,

## Equation 2

$f_{W}=1+\frac{(W-12)}{30}$
Where:
$\mathrm{W}=$ Lane width, minimum of 8 ft and maximum of 16 ft .

## 3. Heavy Vehicle Adjustment Factor, $f_{H V}$

Equation 3 was used to calculate the heavy vehicle adjustment factor.

## Equation 3

$f_{H V}=\frac{100}{100+H V\left(E_{T}-1\right)}$
Where:
HV = percent heavy vehicles
$\mathrm{E}_{\mathrm{T}}=$ passenger car equivalent

## 4. Adjustment for Grade, $f_{g}$

Due to lack of grade information on urban minor arterials and collectors, HPMS uses $\mathrm{f}_{\mathrm{g}}$ as 1.0.

## 5. Adjustment for Parking, $f_{p}$

For parking adjustment, Equation 4 is used to calculate the capacity adjustment.

## Equation 4

$f_{p}=\frac{N-0.1-\frac{18 N_{m}}{3,600}}{N}$
Where:
$\mathrm{f}_{\mathrm{p}}=$ Parking adjustment factor
$\mathrm{N}=$ Number of lanes in group
NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update
$\mathrm{N}_{\mathrm{m}}=$ Number of parking maneuvers per hour (6 for two-way streets with parking one side, 12 for two-way streets with parking both sides or one-way streets with parking one side, 24 for one-way streets with parking on both sides)

If no parking space or parking data is available, then $\mathrm{f}_{\mathrm{p}}$ is set equal to 1.0.

## 6. Adjustment for Bus Blockage, $f_{b b}$

Due to non-availability of bus routes data, fbb is set to 1.0 . Also default values of fbb used in HCM 2000 for bus routes are close to one.

## 7. Type of Area Adjustment, $f_{a}$

According to HCM $6, \mathrm{f}_{\mathrm{a}}$ is set to 0.9 for CBDs and 1 elsewhere.

## 8. Lane Utilization Adjustment, $f_{L U}$

A lane utilization adjustment factor of 1.0 was used for the model.

## 9. Adjustment for Left Turns, $f_{L T}$

Adjustment factor of 0.95 is used for left turn movements to estimate the capacities in this study.

## 10. Adjustment for Right Turns, $\boldsymbol{f}_{\text {RT }}$

For right turn movements, the adjustment factor of 0.85 was used for the model.

## 11. Adjustment for Pedestrian-Bicycle Blockage on Left Turns, $f_{L p b}$

 Adjustment factor for pedestrian-bicycle blockage is set to 1.0 in HPMS procedure due to non-availability of extensive inputs.
## 12. Adjustment for Pedestrian-Bicycle Blockage on Right-Turns, $f_{\text {Rpb }}$

Similarly, the adjustment factor for pedestrian-bicycle blockage for right turns is also set to 1.

## 13. Peak Hour Factor (PHF)

The default values of 0.92 and 0.88 are set for urban and rural sections respectively.

## 14. Effective Green Ratios ( $g_{i} / C$ ) for Lane Groups

A $\mathrm{g}_{\mathrm{i}} / \mathrm{C}$ value of 0.45 is used for principal and minor arterials while 0.40 is used for collectors. These values were default values suggested in HPMS. The values were evaluated based on signal timing data provided by the MPO and were found to be reasonable.

### 3.1.3. Step 3: Approach Capacity Calculation

After estimating the saturation flow rate for each lane group, the approach capacity for each link at the B end node of the link is calculated. This calculation is done by incorporating adjustment factors using the effective green ratio as shown in Equation 5.

## Equation 5

$C_{S I}=\sum_{i} S_{i} \times \frac{g_{i}}{C}$
Where $\mathrm{C}_{\text {si }}$ is signalized intersection approach capacity,
$\mathrm{S}_{\mathrm{i}}$ represents saturation flow rate for lane group i and
$\frac{g_{i}}{c}$ represents effective green ratio for lane group i.

### 3.2. Capacities for Stop Control Intersections

The calculation for capacities for links that have stop controls at the B-node end also follow a series of steps as described next.

### 3.2.1. Step 1: Calculate the Potential Capacity for each Turning Movement

The potential capacity for each turning movement uses the conflicting flow rate, the critical gap, the number of lanes, follow up time for each movement, and percent heavy vehicles as input parameters. Equation 6 shows the equation used to calculate the potential capacity for stop controlled intersections for movements that are not shared.

## Equation 6

$C_{p, x}=C V_{c, x} \times \frac{e^{-V_{c, x} \times t_{c, x} / 3600}}{1-e^{-V_{c, x} \times t_{f, x} / 3600}}$
Where:

| $\mathrm{C}_{\mathrm{p}, \mathrm{x}}$ | = | Potential Capacity of movement x ( vph ) |
| :---: | :---: | :---: |
| $\mathrm{CV}_{c, \mathrm{x}}$ | = | Conflicting flow rate for each movement x (vph) |
| $\mathrm{t}_{\mathrm{c}, \mathrm{x}}$ | = | Critical gap (seconds) for each movement x $=t_{c, \text { base }}+\left(P_{H V} * t_{c, H V}\right)$ |
| $t_{c}$, base | $=$ | Default values from Table 7 |
| $\mathrm{t}_{\mathrm{c}, \mathrm{HV}}$ | = | 1.0 for one or two-through lane roads |
|  |  | 2.0 otherwise |
| $\mathrm{P}_{\mathrm{HV}}$ | $=$ | Percent of heavy vehicles in traffic stream, peak period, expressed as decimal |
| $\mathrm{tf}_{\mathrm{Y}, \mathrm{x}}$ | $=$ | Follow-up time (seconds) for each movement x $=t_{f, b a s e}+\left(P_{H V} * t_{f, H V}\right)$ |
| tf, HV | $=$ | 0.9 for one or two through lane roads 1.0 otherwise |

Table 7 and 8 show the default values that were used for calculating the potential capacities for stop-controlled intersections in the model.

Table 7 Default values for calculating potential capacities ( $\mathbf{C p}, \mathbf{x}$ ) of stop signcontrolled highways

| Vehicle Movement (x) | Base Critical Gap, $\mathrm{t}_{\mathrm{c}, \text { base }}$ | Follow-up Time, t f,base |
| :--- | :---: | :--- |
| Right Turns | 6.2 | 3.3 |
| Through | 6.5 | 4.0 |
| Left Turns | 7.1 | 3.5 |

Table 8 Default Values for Conflicting Flow Rates

| Functional Class | Conflicting Flow Rate, $\mathrm{CV}_{\mathrm{c}, \mathrm{X}}$ |
| :--- | :---: |
| Rural Principal Arterials | 100 |
| Rural Minor Arterials | 150 |
| Other Rural | 200 |
| Urban Principal Arterials | 250 |
| Urban Minor Arterials | 500 |
| Other Urban | 750 |

### 3.2.2. Step 2: Determine Potential Approach Capacity for Shared Lanes

For stop controlled intersections with shared turning lanes, Equation 7 was used to determine each approach's capacity. If turn lanes are not shared, step 2 is skipped.

## Equation 7

$C_{p, S H}=\frac{\sum_{x} V_{x}}{\sum_{x}\left(\frac{V_{x}}{C_{p, x}}\right)}$
Where,

$$
\begin{array}{lll}
\mathrm{C}_{\mathrm{p}, \mathrm{SH}} & = & \text { Potential capacity of the shared lane (vph) } \\
\mathrm{V}_{\mathrm{x}} & = & \text { Flow rate of the } \mathrm{x} \text { movement in the shared lane (vph) } \\
\mathrm{C}_{\mathrm{p}, \mathrm{x}} & = & \text { Potential capacity of } \mathrm{x} \text { movement in the shared lane (vph) }
\end{array}
$$

### 3.2.3. Step 3: Calculate Approach Capacity for each Lane Group Type

Table 9 shows the different equations that are used to calculate the approach capacity for each lane group as described previously for stop controlled intersections.

Table 9 Stop Sign Control Intersection Capacity Equations for Different Lane Groups NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update

| 1 | All Movements from Shared Lane | $C_{A}=N_{T} \times C_{p, S H}$ |
| :---: | :---: | :---: |
| 2 | Shared LT + T lane; exclusive RT lane | $C_{A}=N_{T} \times C_{p, S H(L T+T)}+N_{R T} \times C_{p, R T}$ |
| 3 | Shared RT + T lane; exclusive LT lane | $C_{A}=N_{T} \times C_{p, S H(R T+T)}+N_{L T} \times C_{p, L T}$ |
| 4 | Exclusive lanes for all movements | $C_{A}=N_{L T} \times C_{p, L T}+N_{T} \times C_{p, T}+N_{R T} \times C_{p, R T}$ |
| 5 | Consider only through volumes | $C_{A}=N_{T} \times C_{p, T}$ |

Where:

| $\mathrm{N}_{\mathrm{T}}$ | $=$ | Number of peak through lanes; 1 for rural highways with two <br> through lanes, 2 for rural highways with three through lanes |
| :---: | :--- | :--- |
| $\mathrm{N}_{\mathrm{LT}}$ | $=$ | Number of left turn lanes |

### 3.3. Freeway Capacity

For freeways, the following steps detailed the equations and procedures used to calculate their capacities.

### 3.3.1. Step 1: Calculate Free Flow Speed

Equation 8 shows the formula used to calculate free flow speeds. The equation utilizes the base free flow speed which is calculated using an algorithm that incorporates real time travel time data, lane width, right shoulder, number of lanes and interchange density adjustments.

## Equation 8

$F F S=B F F S-f_{L W}-f_{L C}-f_{N}-f_{I D}$
Where:

| BFFS | $=$ | Base free flow speed |
| ---: | :--- | :--- |
| $\mathrm{f}_{\mathrm{LW}}$ | $=$ | Adjustment factor for lane width |
| $\mathrm{f}_{\mathrm{LC}}$ | $=$ | Adjustment factor for right shoulder lateral clearance |
| $\mathrm{f}_{\mathrm{N}}$ | $=$ | Adjustment factor for number of lanes |
| $\mathrm{f}_{\mathrm{ID}}$ | $=$ | Adjustment factor for interchange density |

Table 10 shows the adjustment factors for lane width. This value is zero for 12 ft wide lanes. However, if different widths exist, the values should be adjusted accordingly.

Table 10 Adjustment Factors Lane Width
NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update

| Lane Width | Reduction in FFS (mph, fLw) |
| :---: | :---: |
| 12 Ft | 0.0 |
| 11 Ft | 1.9 |
| $<=10 \mathrm{ft}$ | 6.6 |

Table 11 shows the adjustment factors for right shoulder clearance. The model assumed a right shoulder clearance of greater than 6Ft. Adjustments should be made accordingly if these are different. For studies used to evaluate the construction/reconstruction impacts on freeways, this parameter will be critical in determining the reduced capacity if shoulders are closed or reduced.

## Table 11 Right Shoulder Clearance Adjustment Factor

| Right Shoulder <br> Width (Ft) | Reduction in FFS (mph, fLC) |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 2 | 3 | 4 | $>=5$ |
| $>=6$ | 0.0 | 0.0 | 0.0 | 0.0 |
| 5 | 0.6 | 0.4 | 0.2 | 0.1 |
| 4 | 1.2 | 0.8 | 0.4 | 0.2 |
| 3 | 1.8 | 1.2 | 0.6 | 0.3 |
| 2 | 2.4 | 1.6 | 0.8 | 0.4 |
| 1 | 3.0 | 2.0 | 1.0 | 0.5 |
| 0 | 3.6 | 2.4 | 1.2 | 0.6 |

Table 12 shows the adjustments used for interchange densities. The distance between two nodes connecting the interchanges is used to calculate the interchange density. The values for small urban areas are used in the model. For the model, all interchange densities were greater than 1 mile. This parameter becomes important when new interchanges that increase interchange densities are being considered as they will potentially reduce freeway capacities.

Table 12 Adjustments for Interchange Density

| Functional Class | Area Size | Interchange Density | Interchange Adj. Factor, ( $\mathrm{f}_{\mathrm{ID}}$ ) |
| :---: | :---: | :---: | :---: |
| Urban Interstates | Small Urban | 0.7 | 1 |
|  | Small Urbanized | 0.76 | 1.3 |
|  | Large Urbanized | 0.83 | 1.7 |
| Other Urban Highways Qualifying as Freeways | Small Urban | 0.83 | 1.7 |
|  | Small Urbanized | 0.88 | 1.9 |
|  | Large Urbanized | 0.91 | 2.1 |

NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update

Table 13 details the adjustment factors used for adjusting freeway capacities based on the number of lanes.

Table 13 Adjustments for Number of Lanes

| No of Lanes (One direction; Urban only) | Reduction in FFS (mph, $\mathbf{f}_{\mathbf{N}}$ ) |
| :---: | :---: |
| $>=5$ | 0.0 |
| 4 | 1.5 |
| 3 | 3.0 |
| 2 | 4.5 |

### 3.3.2. Step 2: Calculate Base Freeway Capacity

The base freeway capacity is calculated using Equation 9 for freeways with speeds less than or equal to 70 mph and freeways with speeds greater than 70 mph .

## Equation 9

BaseCap $=1,700+10$ FFS; for FFS $\leq 70 \mathrm{mph}$
BaseCap $=2,400+10 F F S ;$ for $F F S>70 \mathrm{mph}$

### 3.4. Ramp Capacity Calculations

The following steps were used to calculate ramp capacities:

### 3.4.1. Step 1: Calculate Free Flow Speed

Using Equation 10, the free flow speed for ramps were calculated as follows

## Equation 10: Ramp Free Flow Speed Equation

$\mathrm{S}_{\mathrm{fo}}=25.6+0.47 * \mathrm{~S}_{\mathrm{pl}}$
Where $\mathrm{S}_{\mathrm{f}}=$ base free-flow speed (BFFS); and
$\mathrm{S}_{\mathrm{pl}}=$ posted speed limit

### 3.4.2. Step 2: Calculate Maximum Saturation Flow Capacity

The Chattanooga-Hamilton model was used to develop Equation 11 to calculate ramp capacities as follows:

## Equation 11: Maximum Saturation Flow Capacity

$\mathrm{SF}=\mathrm{C} * \mathrm{~N}^{*}(\mathrm{v} / \mathrm{c}) \mathrm{I}^{*}$ PHF
Where SF is maximum service flow rate;

C is ideal capacity based on $\mathrm{S}_{\mathrm{fo}}$;
N represents lumber of lanes;
(v/c) is rate of service flow for levels of service D or E. v/c=0.88 at LOS D, 1 at LOS E; and PHF represents peak hour factor.

Table 28 and Table 29 in Appendix 1 shows sample Capacity calculations that are used in the model for signalized intersections.

## 4. MODEL INPUT DATA

The main data used as input to the model are the network and socioeconomic data. The two datasets were developed through a collaborative effort between MPO staff and ATAC. These data are discussed next.

### 4.1. Transportation Network Data

The transportation network is an abstract representation of the transportation system that has essential data describing the available transportation supply. The network is maintained in GIS as a geodatabase that contains four feature classes. These feature classes included: links which represent the roadway, nodes which represent intersections, centroids which are the trip origin/destination points for transportation analysis zones (TAZ) and external centroids which are external loading trip points. The network was updated by ATAC and the MPO to represent 2015 base year conditions.

The main attributes of the network that are used in the model include the network geometries (number of lanes and turn lanes), posted and Free Flow Speeds, functional classification, length of links, link ADTs (passenger and truck counts), link location area type and the intersection controls.

### 4.1.1. Distribution of Modeled Network by Functional Classifications

Table 14 shows the percentage of centerline miles by functional class.
Table 14 Centerline Miles Distribution by Functional Classification

| Roadway <br> Type | Interstate | Major <br> Arterials | Ramps | Minor <br> Arterials | Collectors | Locals | Rural <br> Paved | Rural <br> Unpaved |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| \% of Total <br> Roadway | $8 \%$ | $11 \%$ | $2 \%$ | $18 \%$ | $16 \%$ | $8 \%$ | $10 \%$ | $25 \%$ |
| Miles | 23 | 32 | 7 | 51 | 47 | 24 | 29 | 72 |

Figure 8 shows the distribution of centerline miles for the links within each functional classification used in the model. As expected, ramps made up the lowest percentage of centerline miles comprising only $2 \%$, while Rural Unpaved roadways made up the highest percentage comprising 25\% of the network. Rural Unpaved roadways typically occurred in the outskirts of the model network and carried very little volumes in the assigned network. Minor arterials and collectors made up 18 and $16 \%$ of the roadway network. Major arterials made up $11 \%$ and interstate roadways made up $8 \%$ of the modeled network.

Figure 8 Centermile Distribution of Links in Network by Functional Class
Table 15 shows the percentage of lanemiles by functional class.
Table 15 LaneMiles Distribution by Functional Classification

| Roadway Type | Interstat <br> $\mathbf{e}$ | Major <br> Arterial <br> $\mathbf{s}$ | Ramp <br> $\mathbf{s}$ | Minor <br> Arterial <br> $\mathbf{s}$ | Collector <br> $\mathbf{s}$ | Local <br> $\mathbf{s}$ | Rural <br> Pave <br> $\mathbf{d}$ | Rural <br> Unpave <br> $\mathbf{d}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| \% <br> Distribution | $7 \%$ | $19 \%$ | $1 \%$ | $17 \%$ | $15 \%$ | $8 \%$ | $9 \%$ | $23 \%$ |
| Lane Miles | 46 | 118 | 7 | 107 | 94 | 47 | 58 | 143 |

Figure 9 show the lanemiles distribution by functional class. Lanemiles take into account the total number of through lanes and do not account for the turn lanes. Major arterials make up $19 \%$ of lanemiles in contrast to the $11 \%$ proportion for centermiles. The proportional distributions for the rest of the functional classes for lanemiles are within $2 \%$ points when compared to the centerline miles.

Figure 9 Lanemile Distribution of Links in Network by Functional Class

Figure 10 shows the modeled network distribution by functional class. The network does not show the centroid connectors.

Intersection controls were added to the model to incorporate delay experienced by road users. CUBE software uses a built in algorithm to calculate the delays that each intersection type contributes to the model. Two way stop controls; four way stop controls; Signals; Roundabouts and Yield controls were added as inputs to the model and are shown in Figure 11.

The intersection control signal timing data was provided by the GF-EGF MPO and represented actual signal timing data for signals for three time periods: AM Peak, PM Peak and Off peak periods. Using intersection data significantly enhanced the models replication of actual travel times. Without the intersection data, the model could only reasonable replicate $60 \%$ of ADT. Additionally, intersection delays would have to be added to the network travel times to represent delays, which may not be represent real world conditions.

Figure 10 GF-EGF 2015 Model Network

Figure 11 Intersection Data for Core Urban Area

### 4.2. Socioeconomic Data

Socioeconomic data are used to generate the total number of trips produced and attracted by each TAZ in the TDM. The TAZ geographies and the socioeconomic data included within each TAZ were developed by a collaborative effort between MPO staff and the ATAC. The socioeconomic data that was used in the model is described next.

### 4.2.1. TAZ Geography files:

584 internal total TAZs were used for the 2015 model. Several TAZs were modified (split or merged) based on input from both the MPO and ATAC.

### 4.2.2. Socioeconomic Data TAZ Attributes

The socioeconomic data within the TAZ contained the following fields

### 4.2.2.1. Number of Persons per household in each TAZ according to the following categories

 (attributes)1. \# of one person households
2. \# of two person households
3. \# of three person households
4. \# of four person households
5. \# of five person households
6. > \# five person households
7. Total number of households

### 4.2.2.2. Vehicles per household in each TAZ ${ }^{1}$

1. \# of zero vehicle households
2. \# of one vehicle households
3. \# of two vehicle households
4. \# of three vehicle households
5. \# of four vehicle households
6. $>4$ vehicle households

### 4.2.2.3. School age children per household in each TAZ in four categories ${ }^{2}$

1. \# of Grade school age children
2. \# of Middle age school children
3. \# of High school age children
4. \# of College age (18-24)
[^39]
### 4.2.2.4. Employment data (\# for each TAZ) ${ }^{3}$

1. Manufacturing (NAICS 31-33)
2. Construction and resources (NAICS 21, 23)
3. Retail (NAICS 44-45)
4. Service (NAICS 52,53,55,56,56,51,62,71,81,99)
5. Agriculture (NAICS 11)
6. Wholesale Trade, Trans Utilities (NAICS:22,48-49,42)
7. Education (NAICS 61) with the following additional fields
a. Elementary school enrollment for each TAZ
b. Middle school enrollment for each TAZ
c. High school enrollment for each TAZ
d. College enrollment data
e. Number of on campus students for each college
f. Number of off campus students for each college
g. Number of parking spots reserved for college students
h. Number of parking spots reserved for staff

### 4.2.2.5. Enplanements

8. Yearly enplanements for the Grand Forks Airport for 2015 $(145,272)$

### 4.2.2.6. Special generators

9. Special generator TAZS (wholesale distributors (Walmart and Super Target, large retail stores, and the Columbia Mall).

### 4.2.2.7.ADT at external locations

Used as estimates of trips that have at least one trip end outside of the MPO area.

[^40]
## 5. TRIP GENERATION

Trip generation is the first modeling step of TDM. The number of trips produced and attracted to each TAZ are developed in this step. Regression models were applied to the socioeconomic data to generate the number of trips produced and attracted to each TAZ. Trips Produced are typically a function of the household characteristics for each TAZ and represent the origins of trips. Trips attracted are a function of the employment magnitude and type for each TAZ and represent where trips generated are being attracted to. The inclusion of long-haul freight movements was an addition to the current model in contrast to previous version of the GF-EGF TDM. The next subsections describe in detail, the different trip generation methods that were used and the output from the trip generation step.

### 5.1. Internal-Internal Passenger Vehicle Trip Productions and Attractions

The Internal-Internal Passenger Vehicle Trip Generations (II Trips) represent the passenger vehicle trips that originate and terminate within the MPO area. These trips are classified into five main trip purposes including (Home Based Work) HBW, Home-Based Shop (HB-Shop), Home Based Other (HBO), Home Based School K-12 (HBSchool K-12), Home Based University (HBU) and Non Home Based (NHB) trips.

### 5.1.1. Trip Productions

Table 16 shows the trip generation equations that were used to develop the II trip production tables. The numbers in bold show the actual regression parameters used while the number underneath each one shows the p-value for each of the regression equations. The model parameters were developed from a household travel survey that was done in the FargoMoorhead area. These parameters are the starting equations that were used, the final equations were adjusted during the calibration process to reflect different area types and to match the observed traffic counts in the trip assignment step.

Table 16 Internal-Internal Passenger Trip Generation Equations

| Persons per Household |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Purpose | 1 | 2 | 3 | 4+ | Overall |
| HBW | 1 | 1.72 | 2.56 | 2.42 | 1.75 |
|  | 14.9 | 19.82 | 13.61 | 17.15 | 30.45 |
| HBO | 1.09 | 2.4 | 2.51 | 4.8 | 2.46 |
|  | 11.9 | 21.04 | 9.64 | 9.74 | 20.81 |
| NHB | 1.57 | 2.4 | 2.89 | 3.57 | 2.43 |
|  | 11.44 | 17.78 | 7.39 | 10.1 | 22.49 |
| HB-HiSch | 0 | 0 | 0.47 | 0.46 | 0.16 |
|  |  |  | 4.65 | 4.66 | 6.64 |
| HB-GrSch | 0 | 0.13 | 0.8 | 2.4 | 0.62 |
|  | 0.88 | 5.09 | 6 | 12.52 | 11.94 |
| HB-Sch | 0 | 0.13 | 1.27 | 2.86 | 0.77 |
|  | 0.88 | 5.09 | 8.38 | 14.21 | 13.29 |
| IE | 0.05 | 0.3 | 0.18 | 0.31 | 0.21 |
|  | 2.25 | 6.71 | 2.8 | 3.52 | 7.71 |
| Total | 3.72 | 7 | 9.52 | 14.04 | 7.66 |
|  | 27.77 | 35.97 | 18.52 | 19.59 | 35.69 |

Table 17 shows the total number of households for each household type (PHH1 = 1 person Households) that were used for the 2015 GF-EGF TDM. A total of 27,326 households were modeled for the 2015 base year TDM. One person households represented $34 \%$ of total households while only $2 \%$ of the households had 6 or more persons.

Table 17 Total Households per Household Type for the 2015 GF-EGF TDM

| Household Category | PHH1 | PHH2 | PHH3 | PHH4 | PHH5 | PHH6 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Total \# of Households | 9,357 | 8,956 | 4,332 | 2,939 | 1,133 | 609 | 27,326 |
| Percent of total | $34 \%$ | $33 \%$ | $16 \%$ | $11 \%$ | $4 \%$ | $2 \%$ | $100 \%$ |

Applying the equations from Table 16 to the household data from each TAZ, the trip productions estimated in 2015 TDM are shown in Table 18. HB-Shopping and HBO were added together and are shown in the HBO column. NHB trips represented the highest number of trips followed by HBO and HBW trips. The Elementary school's trips were more than twice the Middle school trips.

Table 18 Total Trips Produced by Purpose for the 2010 TDM

| Purpose | HBW | NHB | HBO | Elem | Mid | High |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Total | 41,573 | 117,472 | 47,010 | 8,630 | 3,793 | 5,308 |

### 5.1.2. Trip Attractions

Trip attractions represent the number of trips attracted to each zone based on employment or the size of the school for school trips. Table 19 shows the trip attraction rates (from NCHRP 718) that applied to the socioeconomic data to develop trip attraction tables. Although the socioeconomic data showed several different job types, these were aggregated to represent the categories shown in Table 19. The trip attractions by purpose were balanced and are identical to the trip productions shown in Table 18.

Table 19 Trip Attraction Rates

| Purpose | Retail | Service | Other |
| :--- | ---: | ---: | ---: |
| HBW | 1.2 | 1.2 | 1.2 |
| HBO | 8.1 | 1.5 | .2 |
| NHB | 4.7 | 1.4 | .5 |

Table 20 shows the school trip attraction rates that were used for the model. These trip rates were obtained from the ITE Trip Generation Manual. School trip attractions were balanced to the productions and were identical to the trip productions shown in Table 18.

Table 20 School Trip Attraction Rates

| School | Rate |
| :--- | :--- |
| Elementary | 1.88 |
| Middle | 1.88 |
| High | 1.88 |

### 5.1.3. UND Trip Generations

Since Universities do not fall under normal trip patterns used by the model, a special trip generation trip model was developed for UND students. Trip productions and attractions for UND students were divided into two main components, trip productions for students who live on campus and trip productions for students who live off campus.

For on campus trip generation, trip production rates were obtained from a study that was conducted at the University of Lincoln Nebraska (5). A trip rate of 0.22 was applied to the number of on campus students residing in each UND TAZ (dorms, student apartments, fraternities). The number of on campus students residing in each UND TAZ was obtained from several different sources including data from the GF-EGF MPO, and UND demographic data. UND campuses occupied nine of the 584 TAZs.

TAZs that are within two blocks of campus will be assumed to be $100 \%$ walk, shuttle or bike i.e. non-vehicle trips, between 2 and four blocks, $80 \%$, etc. It was assumed that there were eight blocks per mile.

Several TAZs that were within the non-vehicle trip distances ( $<12$ blocks from UND campus), however had physical barriers to these modes. For these TAZs, all trips were considered to be $100 \%$ vehicle trips. These TAZs that were within non-vehicle trip mode choices include all TAZs West of I-29, TAZS South of Demers, TAZs North of $10^{\text {th }}$ Ave N and TAZs East of $20^{\text {th }}$ St N .

For students residing off campus, a trip generation rate of 3.8 was applied to the percentage of 18-24 year olds for each TAZ who were assumed to be UND students. The number of UND students for each TAZ was calculated as a proportion of the total UND off campus students to the total of 18-24 year olds for each TAZ. UND student trip production rates were added to HBO for on campus students and HBO for off campus trips.

### 5.2. Freight Trip Productions and Attractions

The decisions that involve the movement of freight differ from those involving passenger trips. For this reason a separate freight trip model was developed. A commodity-based model will using the Commodity Flow Survey Data from the U.S. Census Bureau was used. This data is publicly available for the 2015 base year and forecasts are also available for the next 30 years. Commodity Flow Survey Data exists only for the largest metropolitan areas and for the rest of the states. The implication is that for the GF-EGF MPO, the commodity flow survey data had to be disaggregated from statewide totals to local data. Data on the employment for the two states-ND and MN was used to disaggregate freight data to each MPO and for the rest of the state.

Ordinary Least Square Models were used to develop model parameters that were applied to the number of jobs for each freight generation industry for productions and attractions. The model used data for the metropolitan areas that had disaggregate commodity flow survey data to develop the parameter estimates. This parameter estimates were then applied to the commodity flow survey data for both North Dakota and Minnesota to obtain the total tonnage of freight produced and attracted to the MPO. The total tonnage was assigned to the TAZ level based on the number of jobs for each commodity group in the TAZ. Table 21 shows the results of the freight model by industry type.

Table 21 Freight Trip Productions and Attractions

| Productions |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| NAICS Category | Grand Forks | East Grand Forks | Total |  |
| Manufacturing and Agriculture | 108 | 122 | 229 |  |
| Manufacturing | 459 | 530 | 990 |  |
| Industrial | 1,084 | 138 | 1,222 |  |
| Total | $\mathbf{1 , 6 5 1}$ | $\mathbf{7 9 0}$ | $\mathbf{2 , 4 4 1}$ |  |
| Attractions |  |  |  |  |
| NAICS Category | Grand Forks | East Grand Forks | Total |  |
| Wholesale | 2,367 | 753 | 3,121 |  |
| Industrial | 1,902 | 200 | 2,103 |  |
| Manufacturing, | 102 | 66 | 168 |  |
| Retail | 520 | 46 | 566 |  |
| Retail, Wholesale | 590 | 52 | 642 |  |
| Total | $\mathbf{5 , 4 8 2}$ | $\mathbf{1 , 1 1 8}$ | $\mathbf{6 , 6 0 0}$ |  |

## 6. TRIP DISTRIBUTION

The trip distribution step takes the trip productions and attractions developed in the trip generation step and assigns them between Origin-Destination pairs. The gravity model assigns trips based on the number of productions, attractions, a friction factor ( F ), and a scaling factor $(\mathrm{K})$. The friction factor is a value that is inversely proportional to distance, time, or cost which is a measure of the travel impedance between any two zonal pairs. The $k$ factor is a scaling factor that is used during calibration and it limits or increases the volume of traffic that crosses sections of the network. Equation 12 shows the gravity model formulation that was used.

## Equation 12 Gravity Model Used for Trip Distribution

$T_{i j}=P_{i} \frac{K_{i j} A_{j} F_{i j}}{\sum K_{j} A_{j} F_{j}}$
Where,
$\mathrm{T}_{\mathrm{ij}}=$ Number of trips assigned between Zones iand $\mathrm{j} ; \mathrm{P}_{\mathrm{i}}=$ Number of Productions in Zone i ;
$\mathrm{A}_{\mathrm{j}}=$ Number of Attractions in Zone j ;
$\mathrm{F}_{\mathrm{ij}}=$ Friction Factor; and
$\mathrm{K}_{\mathrm{ij}}=$ Scaling factor used in calibration to influence specific ij pairs
The typical output of the trip distribution step in TDMs is a matrix showing the origins and destination of each trip. The gravity model uses the trip generation outputs (production and attractions by trip purpose for each zone), a measure of travel impedance between each zonal pair (travel time), and socioeconomic/area characteristic variables ("K-factor") variables as input. The K-factor is used to account for the effects of variables other than travel impedance in the model. The OD data were used to develop K-factor matrices imputed in the trip gravity model that were used for distributing IE/EI trips.

For the TDM, trips were distributed separately for the different periods.To develop K-factors, it was necessary to aggregate the external portions of these trips into four main external super zones. For example, all the trips that originated from zones to the North of the MPO area were aggregated to one "super TAZ". The proportions of trips from every internal GF/EGF OD TAZ to the "super TAZ" was calculated and used as the K-Factor for the trip distribution of trips. The K-factors used in this way enabled the model to distribute trips more efficiently.

NDSU Upper Great Plains Transportation Institute

For EE trips, the OD data were used to develop K factors in a similar manner to those described for EI/IE trips. This were then used in the EE trip distribution step for the TDM.

For K-12 school trip distribution, school zones were used to assign trips for Grand Forks Public Schools. For East Grand Forks Schools and for Private schools, the gravity model was used to distribute K-12 school trips. The K-factor matrix used ensured that no Public school trips between the cities

## 7. TRIP ASSIGNMENT

Trip assignment is computationally the last step in travel demand modeling. The trip assignment step develops routes and paths that each trip will be choosing on the network when going from its origin to its destination. Trip assignments were carried out for three origin destination matrixes; AM peak, PM peak and off peak periods.

A hybrid model that combined the user equilibrium traffic assignment method to estimate the link travel cost and the intersection control data for intersection delays was used to estimate the travel cost between any two points on the network. A volume delay function was used to calculate the overall cost of travel for each link. The volume delay function uses the BPR formulation that adds cost to a link as additional trips get assigned to that link. It is meant to mimic the fact that as more and more vehicles use a particular link, congestion will occur and will slow down traffic.

The formulation used to calculate the travel cost for the equilibrium assignment method is shown in equation Equation 13. It takes into account the link travel time, the value of travel time and the link distance.

## Equation 13 Trip Assignment Cost Equation

$T C=\left(V T T * L_{t}\right)+0.76 * L_{d}$
Where:

TC = Link Travel Cost
VTT= Value of Travel Time (\$12.85 for the metro area)
$L_{t}=$ Link Travel Time, and
$L_{d}=$ Link Length.
Junction-based assignment uses an intersection constrained assignment method and uses the intersection controls to assign node delays to the network. Junction-based modeling attempts to simulate congestion on a roadway network by modeling what happens at the intersections using the intersection control data like signal timing data.

## 8. CALIBRATION AND VALIDATION

Model calibration refers to the adjustment of model input parameters in order to replicate observed real world data for a base year to otherwise produce reasonable results. It involves adjusting model input parameters such as trip generation rates, node delays, free flow speeds, K factors and friction factors. Figure 12 shows the calibration and validation flow chart that was used for the model. It was an iterative process that involved adjusting the model parameters until a certain level of confidence of the model's replication of real world data was achieved.

Figure 12 Calibration Flow Chart

Model validation compares base year calibrated models output to observed data. Ideally, model calibration data should not be used for validation purposes but this is not always feasible. Model validation is the ultimate step of the travel demand models and gives and indication of how well the model performs in replicating real world data.

The two processes, calibration and validation typically go hand in hand in an iterative process as was done for this model update. The next subsections describe the different methods, models and parameters that were used for model calibration and validation.

### 8.1. Trip Length Frequency Calibration and Validation

Trip length frequency distributions describe the travelers sensitivity to travel time by trip purpose. Steeper curves mean more sensitive travel times. Friction factors are calibrated until a desired trip length frequency is validated against observed data. The friction factors are the main dependent variable in the gravity model. The gamma function was used to develop the friction factor for this model and are shown in Figure 13.

## Equation 14 Friction Factor Equation

$F_{i j}^{p}=a * t_{i j}^{b} * \exp \left(c * t_{i j}^{b}\right)$
Where,
$F_{i j}^{p}=$ Friction factor for purpose p (HBW, HBO, NHB)
$t_{i j}^{b}=$ travel impedance between zone i and j ,
$\mathrm{a}, \mathrm{b}$ and c are gamma function scaling factors.
The friction factors were calibrated by adjusting the $\mathrm{a}, \mathrm{b}$ and c parameters until the desirable trip length frequency distribution for Home Based Work Travel times were reached. Observed trip length frequency data for the home-based work trips were obtained from the census journey to work database for the metropolitan area. Only trips lower than 35 minutes were considered with the assumption that 35 minutes was the highest possible travel time between any two points within the metro area.

The average trip length for the observed data was calculated as 11.85 compared to the average trip length of 11.76 produced by the model for HBW trips. The desired average trip lengths for HBO and NHB trips were $88 \%$ and $82 \%$ of the average trip length for HBO and NHB trips. The average trip length for the models HBO and NHB trips were 10.4 and 9.77 minutes respectively.

Figure 13 Friction Factors
Figure 14 shows the comparison between observed trip length frequencies and the modeled trip length frequencies for HBW trips. The comparison was done for only HBW trips since that's the only observed data available. The two graphs are very similar to each other.

Coincidence ratios were also calculated to verify the fit between the observed and modeled trip lengths. The coincidence ratio is the area under both curves divided by the area under at least one of the curves when both curves are plotted together. It measures how the percent of area between that coincides between two curves. Mathematically, the sum of the lower value of the two distributions for each time increment is divided by the sum of the higher value of the two distributions at each increment. Coincidence ratios lie between 0 and 1.0 with a ratio of 1.0 indicating identical distributions. The coincidence ratio calculated between the modeled and observed data was 0.89 showing a strong coincidence between modeled and observed trip lengths.

Given Figure 14 and the coincidence ratio calculations, the trip length frequency and average trip lengths were reasonably calibrated and validated. , it is reasonable to assume that trip length frequencies had been reasonably validated with observed data. Figure 15 shows the modeled trip length frequencies for all purposes.

Figure 14 Comparison of Observed to Model Trip Length Frequency

Figure 15 Modeled Trip Length Frequencies for All Trip Purposes

### 8.2. Vehicle Miles Traveled (VMT) Calibration and Validation

The modeled vehicle miles traveled are a function of trips generated by the model and the length of those trips in miles. VMTs summaries provide an indication of the overall reasonableness of the travel demand in the study area. To calibrate the VMT values, ATAC first calibrated the total VMT for the entire model area. If the modeled VMT values were different from the values calculated by multiplying the counted ADTs by length (observed VMTs), ATAC adjusted the trip generation and vehicle occupancy rates until the model and NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update
reported VMT values were similar. Adjusting the trip generation and occupancy rates changes the total number of trips that are generated within the transportation model. This in turn increases or decreases the total number of vehicle miles traveled.

Once the total VMT was reasonable, ATAC checked the VMT distribution according to the functional class. VMT summaries by functional classification provide an indication of how well the models assignment procedures perform. They will indicate if the model handles free flow speeds, capacities or whether the trip assignment function has any issues. To calibrate the VMT by facility type, if functional class VMT distribution was off target, global speeds by facility type were adjusted.

Table 22 shows the VMT comparison between modeled and observed VMTs and their various distributions as a percentage of total VMT. The model performs very well in replicating the VMTs for Interstates and Major arterials with VMT differences of less than $2 \%$ and had similar distributions to the observed VMTs. The VMTs for Local and rural roads of $5 \%$ and $-6 \%$ respectively which is an acceptable deviation. Collectors had a $-12 \%$ VMT difference. Collectors had the most discrepancy between the modeled and observed VMTs. Overall, the model performs within reasonable and acceptable deviations in replicating VMTS by functional class.

Table 22 Modeled VMTs compared to Observed VMTs

|  | Observed <br> VMT | Modeled <br> VMT | Difference | \% Difference | Observed <br> Distribution | Modeled <br> Distribution |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Interstate | 101,054 | 103,024 | 1,970 | $2 \%$ | $21 \%$ | $21 \%$ |
| Major Arterial | 207,238 | 212,044 | 4,806 | $2 \%$ | $43 \%$ | $44 \%$ |
| Minor Arterial | 95,705 | 95,741 | 36 | $0 \%$ | $20 \%$ | $20 \%$ |
| Collectors | 61,287 | 54,706 | $(6,581)$ | $-12 \%$ | $13 \%$ | $11 \%$ |
| Local | 5,079 | 5,320 | 241 | $5 \%$ | $1 \%$ | $1 \%$ |
| Rural | 11,340 | 10,726 | $(614)$ | $-6 \%$ | $2 \%$ | $2 \%$ |
| Total | 481,703 | 481,561 | $(142)$ | $0 \%$ | $100 \%$ | $100 \%$ |

### 8.3. Screenline Comparisons

Screenlines are barriers to travel between two areas in a travel demand model including natural barriers such as rivers, mountains, etc. and man-made barriers such are interstates and major arterials, railroads etc. Five screenlines were used for the model: BNSF Mainline railroad, the Red River, 32nd Ave S., Columbia Rd and I-29. Table 23 lists the Screenlines that were used in the GF EGF model.

The 32nd avenue south Screenline had the highest Screenline difference (-6.16\%) between observed and Modeled screenlines. However, it still falls within a reasonable difference between modeled and observed volumes of $\pm 10 \%$. Based on Travel Model Validation and Reasonableness Checking Manual the values fall within stated reasonable deviation limits. NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update

Table 23 Observed Screenlines Compared to Modeled Screenlines

|  | Observed | Modeled | Difference | \% Difference |
| :--- | :--- | :--- | :--- | :--- |
| Red River | 41,100 | 41,708 | 608 | $1.48 \%$ |
| BNSF Mainline Rail Road | 79,195 | 80,172 | 977 | $1.23 \%$ |
| I-29 | 52,585 | 51,307 | $-1,278$ | $-2.43 \%$ |
| 32nd Ave S | 63,423 | 59,513 | $-3,910$ | $-6.16 \%$ |

### 8.4. Modeled ADT Comparison to Observed ADT

Comparing the modeled ADTs to the Observed ADTs is the ultimate test of how well the model can replicate ground truths. The MP provided traffic counts for several links that were compared to the Model ADTs. Two comparisons are made, one for the different functionally classifications and one by volume ranges. Table 24 shows the comparison of the modeled and observed ADTs by functional classification. Overall, the model performs reasonably replicating over 87 of observed counts. Collector roads have the lowest replication of observed counts at $85 \%$.

Table 24 Comparison of Modeled and Observed ADTS by Functional Classification

| Functional Class | Above Criteria | Meets Criteria | Below Criteria | Within Criteria |
| :---: | :---: | :---: | :---: | :---: |
| Freeway | 0 | 10 | 0 | $100 \%$ |
| Major Arterials | 9 | 85 | 5 | $86 \%$ |
| Minor Arterials | 5 | 126 | 14 | $87 \%$ |
| Rural Paved | 0 | 20 | 0 | $100 \%$ |
| Collector | 5 | 118 | 16 | $85 \%$ |
| Local Roads | 2 | 23 | 1 | $88 \%$ |
| Total | 21 | 382 | 36 | $87 \%$ |

Table 25 shows the comparison of modeled and Observed ADTs by volume range. The FHWA criterion sets limits to the deviations between observed and modeled ADTs. Overall the model meets all deviation criterion for all the volume ranges.

Table 25 Comparison of Modeled and Observed ADT by Volume Range

| Volume Range | Above Criteria | Meets Criteria | Below Criteria | Within Criteria | Criteria Deviation |
| :---: | :---: | :---: | :---: | :---: | :---: |
| AADT>25,000 | 0 | 9 | 0 | $100 \%$ | $\pm 15 \%$ |
| 25,000 to 10,000 | 4 | 58 | 6 | $85 \%$ | $\pm 20 \%$ |
| 10,000 to 5,000 | 6 | 62 | 22 | $69 \%$ | $\pm 25 \%$ |
| 5,000 to 2,500 | 3 | 101 | 8 | $90 \%$ | $\pm 50 \%$ |
| 2,500 to 1,000 | 3 | 93 | 0 | $97 \%$ | $\pm 100 \%$ |
| AADT<1000 | 5 | 59 | 0 | $92 \%$ | $\pm 100 \%$ |
| Total | $\mathbf{2 1}$ | $\mathbf{3 8 2}$ | $\mathbf{3 6}$ | $87 \%$ |  |

NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update

### 8.5. Root Mean Square Error and Percent Root Mean Squared Error

The comparison between the modeled and observed ADTS give a good indication of a how well the model replicates real life. However, they do not provide statistical measures of goodness of fit test for the models replication of ground truths. Root Mean Squared Error (RMSE) and Percent Root Mean Squared Errors \%RMSE were used to calculate the accuracy of the model. RMSE compares the error between the modeled and observed traffic volumes for the entire network, giving a statistical measure of the accuracy of the model. RMSE and \% RMSE were found by squaring the error (difference between modeled and counted ADTs) for each link and then taking the square root of the averages as shown in Equation 15.

## Equation 15 RMSE and \% RMSE Calculations

$R M S E=\sqrt{\frac{\sum_{i=1}^{N}\left[\left(\text { Count }_{i}-\text { Model }_{i}\right)^{2}\right]}{N}}$, and
$\% R M S E=\left[\frac{R M S E}{\sum_{i=1}^{N} \operatorname{Count}_{i} / N}\right] * 100$
Where:
Count ${ }_{i}=$ Observed traffic count on link $i$;
Modeli $=$ Modeled traffic volume for link $I$; and
$\mathrm{N} \quad=$ The number of links in the group of links including link $i$, (number of links with counts)

Table 26 shows the \%RMSE by volume range. The \%RMSE is below the typical deviation limits for all the volume ranges shown indicating a good fit between the modeled and observed traffic volumess model is performing reasonably in replicating observed traffic.

Table 26 RMSE Comparison by Volume Range

| Volume Range | RMSE (\%) | Typical Limits (\%) |
| :---: | ---: | :---: |
| AADT>25,000 | $6.72 \%$ | $15-20 \%$ |
| $\mathbf{2 5 , 0 0 0}$ to 10,000 | $13.68 \%$ | $25-30 \%$ |
| $\mathbf{1 0 , 0 0 0}$ to 5,000 | $24.71 \%$ | $35-45 \%$ |
| $\mathbf{5 , 0 0 0}$ to 2,500 | $32.27 \%$ | $45-100 \%$ |
| $\mathbf{2 , 5 0 0}$ to 1,000 | $51.42 \%$ | $45-100 \%$ |

NDSU Upper Great Plains Transportation Institute 2015 Grand Forks East Grand Forks TDM Update

### 8.6. Scatter Plots, R Squares of Model and Observed Traffic

Scatter plots of the modeled traffic volumes against the observed traffic volumes are a good indicator of the model's fit. Figure 16 shows the scatter plot of modeled traffic volumes versus observed counts. The scatter plot suggests that the amount of error in the modeled volumes is proportional to the observed traffic count which is an indication of a good fit between the model and the observed traffic counts.

The R-square (coefficient of determination) is the proportion of the variance in a dependent variable that is attributable to the variance of the independent variable. It measures the strength of the relationships between the assigned volumes and the traffic counts. It measures the amount of variation in traffic counts explained by the model. The modeled R-square of 0.93 shows a strong linear relationship between modeled and observed traffic counts.

Figure 16 Scatter Plot of Modeled and Observed ADTS

### 8.7. Link Travel Time Validation

To evaluate how well the assignment algorithms and the intersection control data performed in the model assignment, sample travel times from the model were compared to average travel times that were obtained using online mapping tools. An online API was developed to collect the data for AM, PM and Off-peak travel times for the average weekdays. Table 27 shows the comparison of the modeled travel times and the average
travel times collected. The modeled travel times are within plus or minus one minute for the different peak periods for the group of selected roadways. This is an indication that the model's assignment algorithms are performing very well in terms of replicating real time travel time data.

Table 27 Travel Time Validation

| Link Type/Location | Distance (Miles) | Observed Travel Time (Min) |  |  | Modeled Travel Time (Min) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Principal Arterials |  | AM | PM | OFF | AM | PM | OFF |
| Gateway Drive - 16th St to N 55th St | 2.8 | 3 | 3 | 3 | 3.52 | 3.69 | 3.39 |
| Gateway Drive - N Columbia Rd to 5th Ave NE | 2.9 | 6 | 7.5 | 6 | 6.53 | 7.37 | 5.48 |
| Demers Ave - 1-29 to Washington St | 2.3 | 6 | 7 | 6 | 5.79 | 6.84 | 4.77 |

| 20th St S - 20th Ave S to 36th Ave S | 1 | 4 | 4 | 4 | 4.25 | 4.67 | 3.44 |

## 9. CONCLUSIONS

This document describes the development, calibration and validation of the GF-EGF MPO base 2015 TDM. Several improvements were made to previous modeling efforts including the addition of Freight movements and better representation of capacities. Overall the model replicates observed travel demand within typically accepted deviation limits.

[^6]:    ${ }^{4}$ For the purposes of permitting over-sized, over-weight loads on Trunk Highways in Minnesota, MnDOT has explored identifying super haul corridors. Superload Corridors can accommodate a loaded vehicle with a 14-foot height limit, a 10 -foot width limit, a 110 -foot length limit, and an 80,000 pound weight limit. Expanded Envelope Corridors are routes that can be permitted for a loaded vehicle that is 16 -feet high, 16 -feet wide, and 130 -feet long with a weight of 235,000 pounds.
